ONE-TOUCH FASTENERS

Screwless! Time Saving!

ONE-TOUCH FASTENERS

Alternatives To Screws

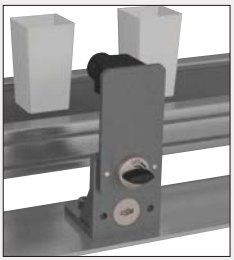
Screw

ONE-TOUCH FASTENERS

Easy! Secure!

Kaizen for Frequent Setups!

Quick fasteners alternative to screws for quick changeover with no tools!
One-Touch Fasteners slash setup time and provide secure locking with easy operation.



Lineup

QUARTER-TURN CLAMPS

Easy-to-read ON/OFF position

RETRACTABLE QUARTER-TURN CLAMPS

No interference by retractable shank

HEAVY DUTY QUARTER-TURN CLAMPS

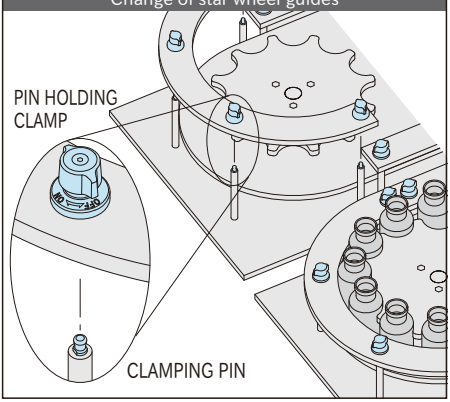
Clampingforce 400N

RETRACTABLE HEAVY DUTY QUARTER-TURN CLAMPS

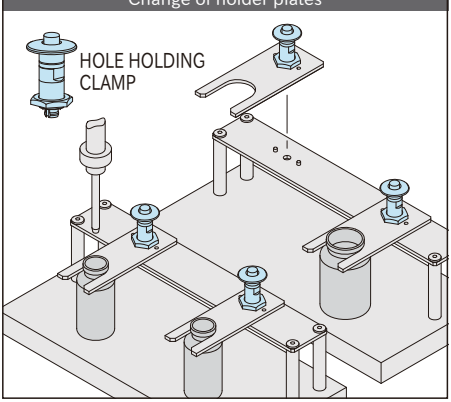
Clamping force 400N
Retractable shank

Application Example

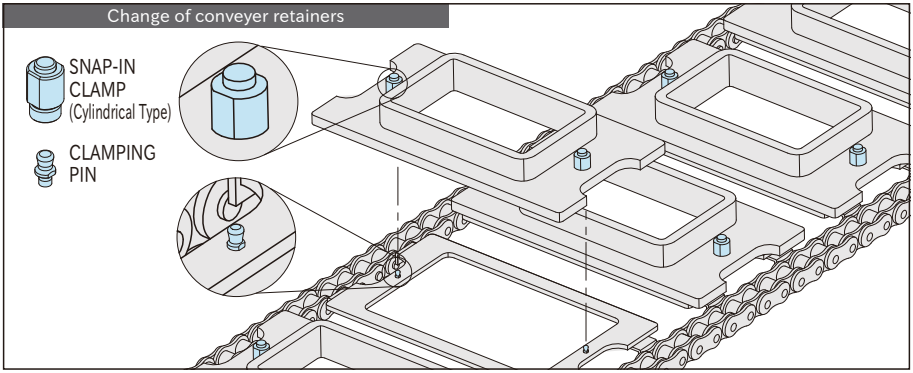
Change of star wheel guides



Change of holder plates



Change of conveyer retainers



KNOB-LOCKING PINS

Secure clamping with wedge

BUTTON-LOCKING PINS

Securely locked upon releasing button

PIN HOLDING CLAMPS

Pin clamping design enables space-saving application

SNAP-IN CLAMPS

Quick & easy snap-in operation

HOLE HOLDING CLAMPS

No need for receptacle

BALL-LOCK CLAMPS

Compact & safety mechanical lock

MAGNET-LOCK CLAMP

Compact & instant magnetic attachment

SHAFT COUPLING CLAMP

Multipurpose coupling element

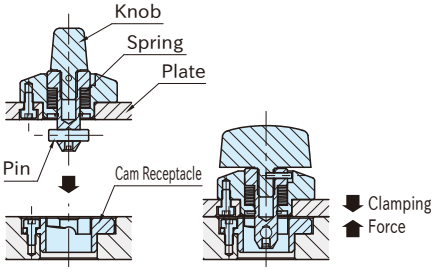
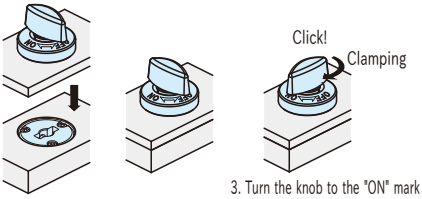
QCTH0834-20-SUS			135	QCTHH0834-20			110

Feature



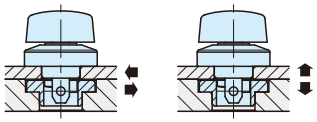
When the pin contacts the cam in the Cam Receptacle, the spring gets compressed to press down the plate.

How To Use



1. Ensure that the knob is positioned at the "OFF" mark.
2. Insert the Quarter-Turn Clamp.
3. Turn the knob to the "ON" mark for clamping. The knob clicks when it is clamped/unclamped. Note: For unclamping, follow back these steps.

Technical information



Part Number		Heatresistant Temperature(℃)	Shear Strength (N)	Tensile Strength (N)
QCTH	0525-10	130	1800	1200
	0834-14		3200	2600
	0834-20			
QCTH-S QCTHL-S QCTH-SUS QCTHH	0525-10	180	1800	1200
	0834-14		3200	2600
	0834-20			

Shear and tensile strength is allowable load and the fastener could break when it receives bigger load.

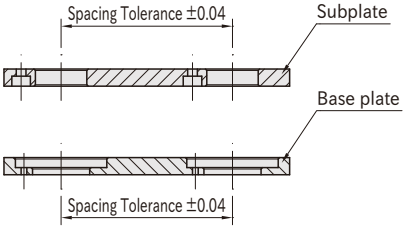
QCASP SPACERS

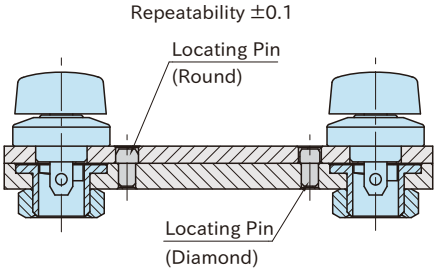
Accuracy

■Machining Accuracy



Spacing tolerance on both the subplate and the base plate should be ±0.04.

■Repeatability

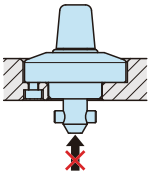


For higher accurate locating, use locating pins.

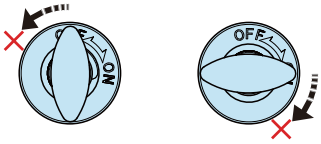
Caution

Note the following cautions using QCTH QCTH-S QCTHL-S QCTH-SUS QCTHH0525-10

・Any force over 600N or more on the tip of the shaft from any direction can damage the pin.



・The knob operating torque is 0.4 N・m. Note that the excessive operating torque over 2 N・m can damage the pin.



Reference

・"How To Install" of QCTH-N QCTH-B QCTH-N-SUS QCTH-B-SUS Cam Receptacles

・Spacer QCASP is required for 3mm or more, under 6mm plate thickness.

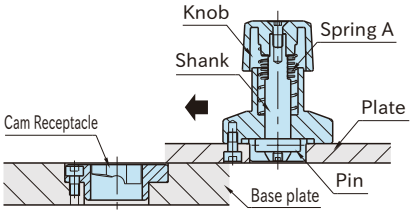
QCTHA0834-14	100	QCTHA0834-14S	120	QCTHA0834-14SUS	117

Supplied With

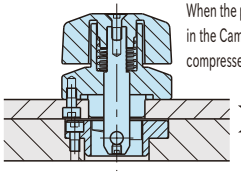
·QCTHA QCTHA-S QCTHA-SUS 0525-10：3 of socket-head cap screws(stainless steel), M2×0.4-5L
·QCTHA QCTHA-S QCTHA-SUS 0834-14：3 of socket-head cap screws(stainless steel), M3×0.5-6L

QCTH-N/QCTH-B CAM RECEPTACLES

Feature



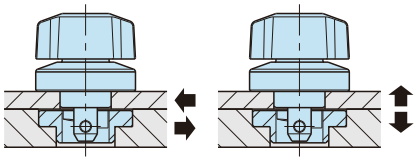
The shank retracts at the unclamping position to enable operations without interference with the base plate.



When the pin contacts along the cam surface in the Cam Receptacle, the spring A gets compressed to press down the plate.

Clamping Force

Technical Information

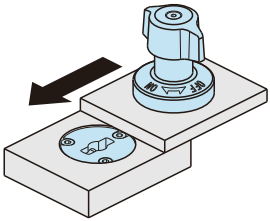


Shear Strength　　Tensile Strength

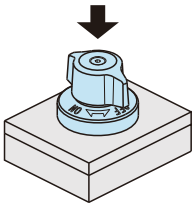
Part Number		Heatresistant Temperature(℃)	Shear Strength(N)	Tensile Strength(N)
QCTHA	0525-10	130	1800	1200
	0834-14		3200	400
QCTHA-S QCTHA-SUS	0525-10	180	1800	1200
	0834-14		3200	

Shear and tensile strength is allowable load and the fastener could break when it receives bigger load.
When the fastener receives tensile load that is bigger than its clamping force, there is a gap between the plates and the fastener could break if this happens frequently.

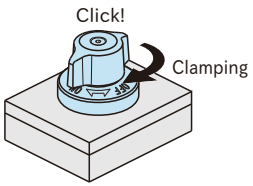
How To Use



1. Ensure that the knob is positioned at the "OFF" mark and the shank is retracted.



2. Insert Retractable Quarter-Turn Clamp pressing the knob.

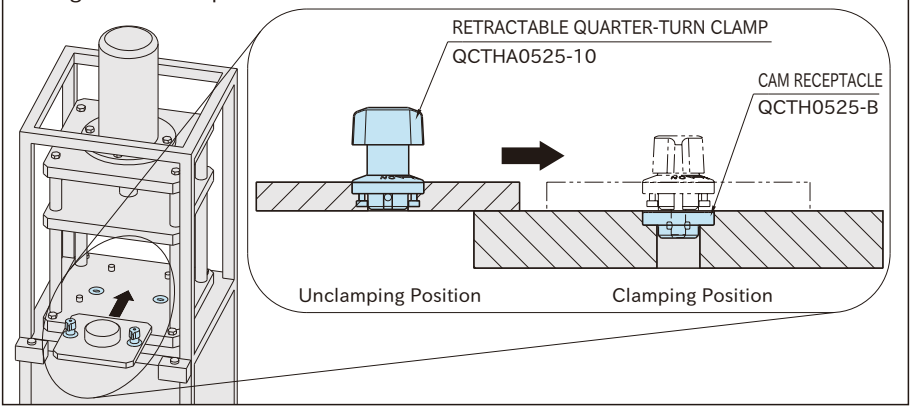


3. Turn the knob to the "ON" mark for clamping. The knob clicks when clamped.
Turning the knob to the "OFF" position, the shank returns automatically to the unclamping position by the spring.

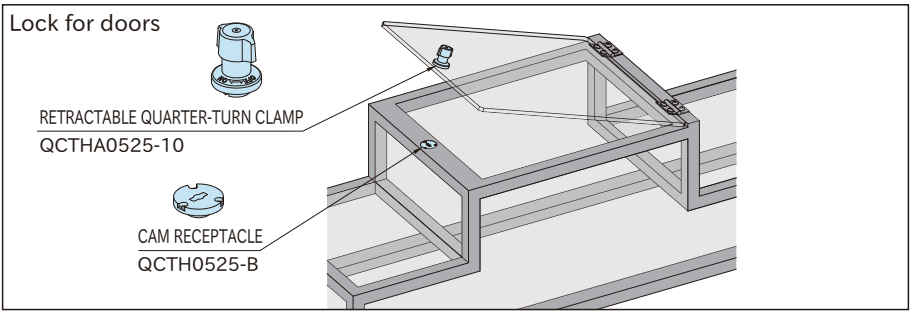
Continuing on Next Page

Application Example

Changes of fixture plates



Lock for doors



Changes of suction grippers for transfer equipment

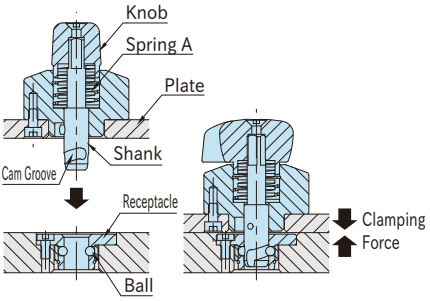
QCTHS QCTHS-S 0834-20:
3 of socket-head cap screws(stainless steel), M3×0.5-6L

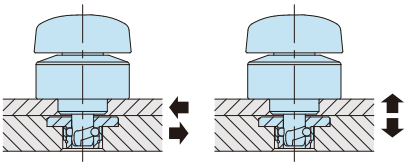
QCTHS-B LOCKING RECEPTACLE

Feature



When the cam groove moves along the ball inside the receptacle, the spring A gets compressed to press down the plate.

Technical Information

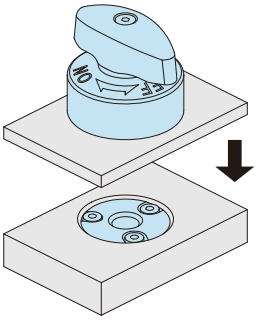


Part Number	Heatresistant Temperature (℃)	Shear Strength (N)	Tensile Strength (N)
QCTHS0825-20	130	4800	1100
QCTHS0825-20S	180		
QCTHS0834-20	130		1600
QCTHS0834-20S	180		

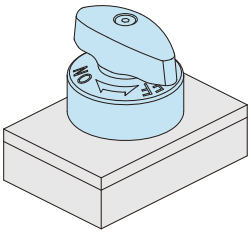
Shear and tensile strength is allowable load and the fastener could break when it receives bigger load.

When the fastener receives tensile load that is bigger than its clamping force, there is a gap between the plates and the fastener could break if this happens frequently.

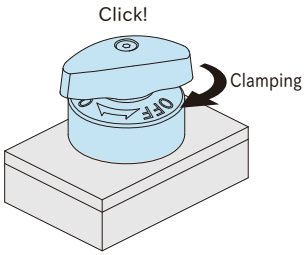
How To Use



1. Ensure that the knob is positioned atthe "OFF" mark.



2. Insert the Heavy Duty Quarter-Turn Clamp.



3. Turn the knob to the "ON" mark for clamping. The knob clicks when it is clamped/unclamped.
Note: For unclamping, follow back these steps.

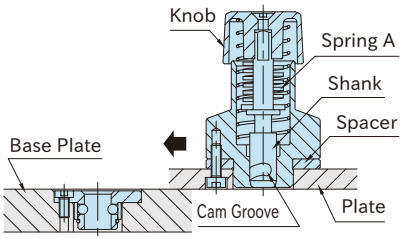
QCTHS-B LOCKING RECEPTACLE

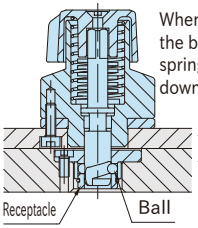
Supplied With

- QCTHSA QCTHSA-S 0825-20:
  3 of socket-head cap screws(stainless steel) M2×0.4-8L
- QCTHSA QCTHSA-S 0834-20:
  3 of socket-head cap screws(stainless steel) M3×0.5-10L

Feature

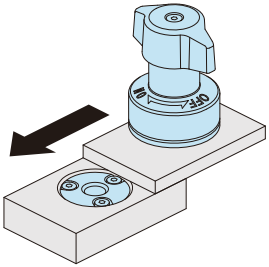


The shank retracts at the unclamping position to enable operations without interference with the base plate.

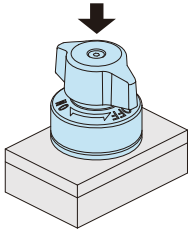


When the cam groove moves along the ball inside the receptacle, the spring A gets compressed to press down the plate.

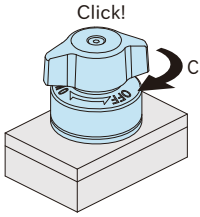
How To Use



1. Ensure that the knob is positioned at the"OFF" mark.



2. Insert the clamp pressing the knob.



3. Turn the knob to the "ON" mark for clamping. The knob clicks when clamped. Turning the knob to the "OFF" position, the shank returns automatically to the unclamping position by the spring.

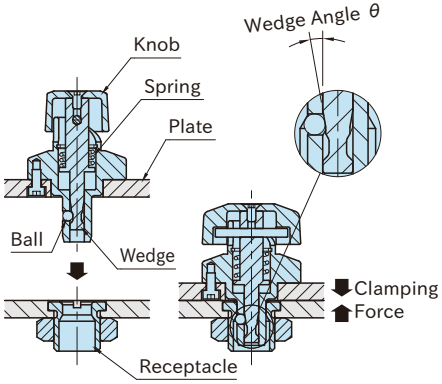
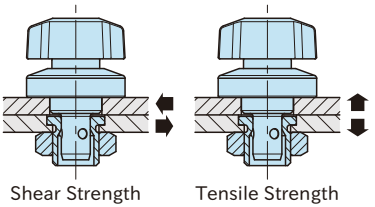
QCBU-M BALL-LOCK RECEPTACLES

Feature



The wedge of the locking pin pushes out the ball onto the taper of the receptacle, for clamping of the two plates.

Technical Information

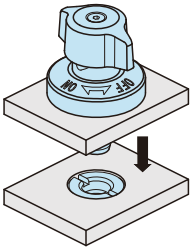


Size		Heatresistant Temperature(℃)	Shear Strength(N)	Tensile Strength(N)
QCWE	0625-10	130	3000	500
	1034-14		9000	1500
	1034-20			
QCWE-S	0625-10	180	3000	500
QCWE-SUS	1034-14		9000	1500
	1034-20			

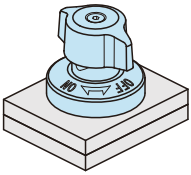
Shear and tensile strength is allowable load and the fastener could break when it receives bigger load.

The ball locking mechanism holds the two plates until the fastener receives bigger tensile load.

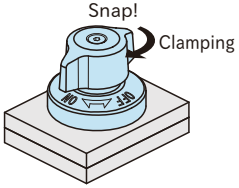
How To Use



1.Ensure that the knob is positioned at the "OFF" mark.



2.Insert the Knob-Locking Pin.



3.Turn the knob to the "ON" mark for clamping.
The knob turns lightly by spring force.
Note: For unclamping, follow back these steps.

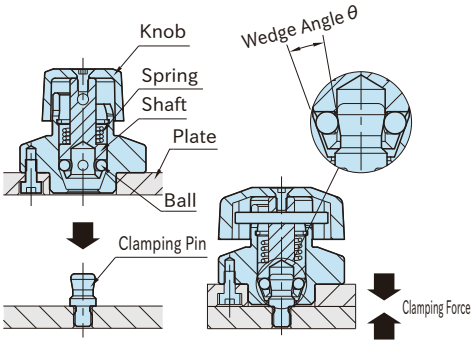
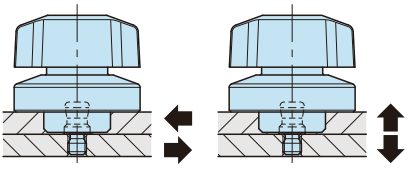
  : 3 of socket-head cap screws(stainless steel), M2×0.4-5L
- QCPC QCPC-S QCPC-SUS 0834-14:
  : 3 of socket-head cap screws(stainless steel), M3×0.5-6L

Feature



Four balls hold the Clamping Pin to pull the plate for clamping.

Technical Information

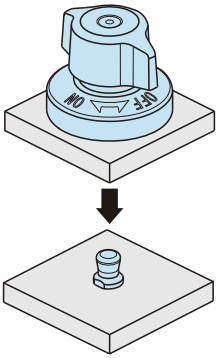


Size		Heatresistant Temperature(℃)	Shear Strength(N)	Tensile Strength(N)
QCPC	0625-10	130	1100	250
	0834-14		1800	400
QCPC-S	0625-10	180	1100	250
QCPC-SUS	0834-14		1800	400

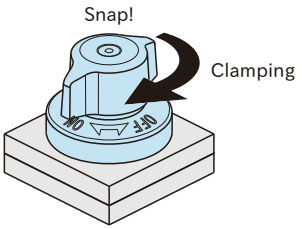
Shear and tensile strength is allowable load and the fastener could break when it receives bigger load.

The ball locking mechanism holds the two plates until the fastener receives bigger tensile load.

How To Use



1. Ensure that the knob is positioned at the "OFF" mark and put Pin Holding Clamp over the Clamping Pin.



2. Turn the knob to the "ON" mark for clamping.
Note: For unclamping, follow back these steps.

Application Example

Changes of guides around star wheels

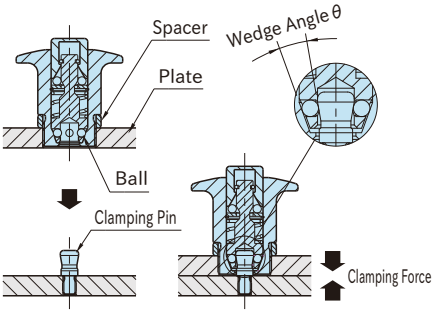
QCPC-M CLAMPING PINS

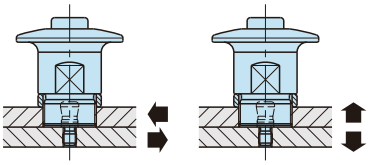
Feature



Four balls hold the Clamping Pin to pull the plate for clamping.

Technical Information

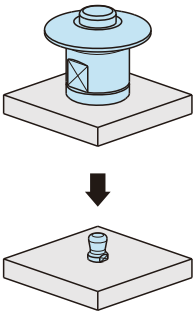
・Heatresistant Temperature 180℃
・Mechanical Strength



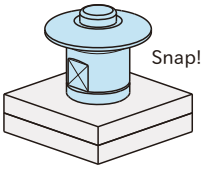
Shear Strength 1100N Tensile Strength 250N

Shear and tensile strength is allowable load and the fastener could break when it receives bigger load.
The ball locking mechanism holds the two plates until the fastener receives bigger tensile load.

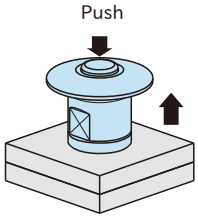
How To Use



1. Put Snap-In Clamp over the Clamping Pin. No need to push the button.



2. Clamped instantly as the pin is inserted.



3. For unclamping, push the button and pull the clamp.

Application Example

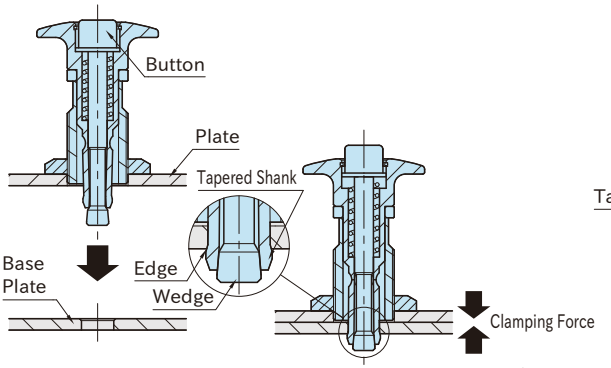
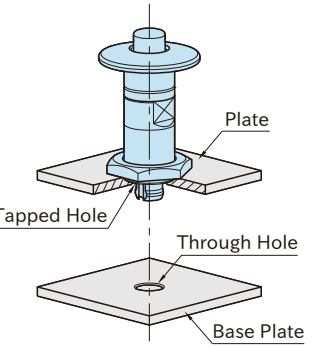
QCHC0612N-6-SUS			
QCHC0816N-3-SUS		400	300
QCHC0816N-6-SUS			

Feature

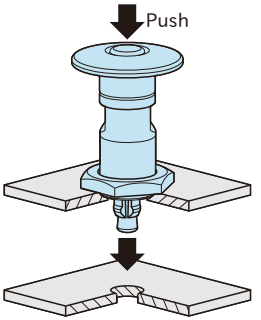


The tapered shank expanded by the wedge pushes out the edge of the hole on the base plate, and the two plates are clamped.

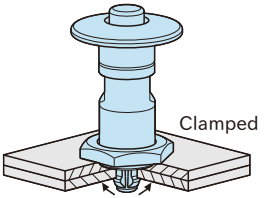


Just a tapped hole and a through hole are required.

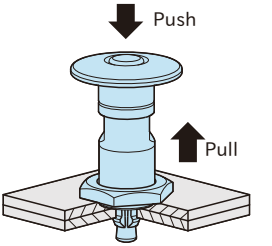
How To Use



1. Insert Hole Holding Clamp pressing the button.



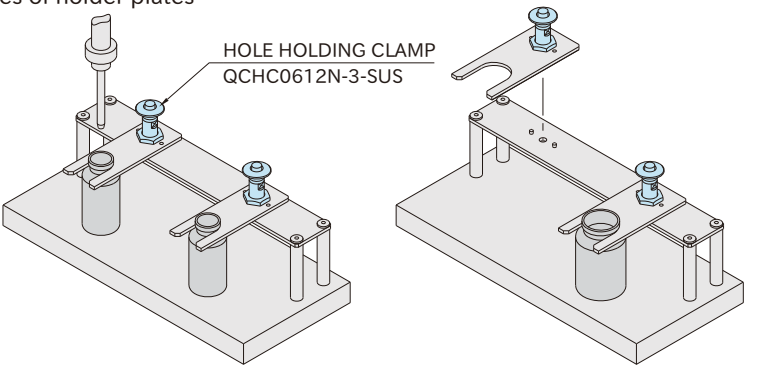
2. The slitted part on the shank expands once the but ton is released, and the plate is clamped.



3. For unclamping, push the button and pull the clamp.

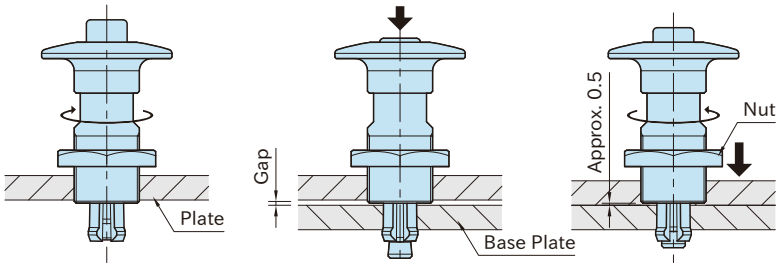
Application Example

Changes of holder plates



Continuing on Next Page

How To Install



1. Screw Hole Holding Clamp into the plate until the end of threaded part comes out of the plate.
2. Insert the clamp pushing the button.
3. Adjust the clamp until the both plates get contacted, and then lock the clamp with the nut.

■Mounting Hole on Plate

ONE-TOUCH SLIDING LOCKS

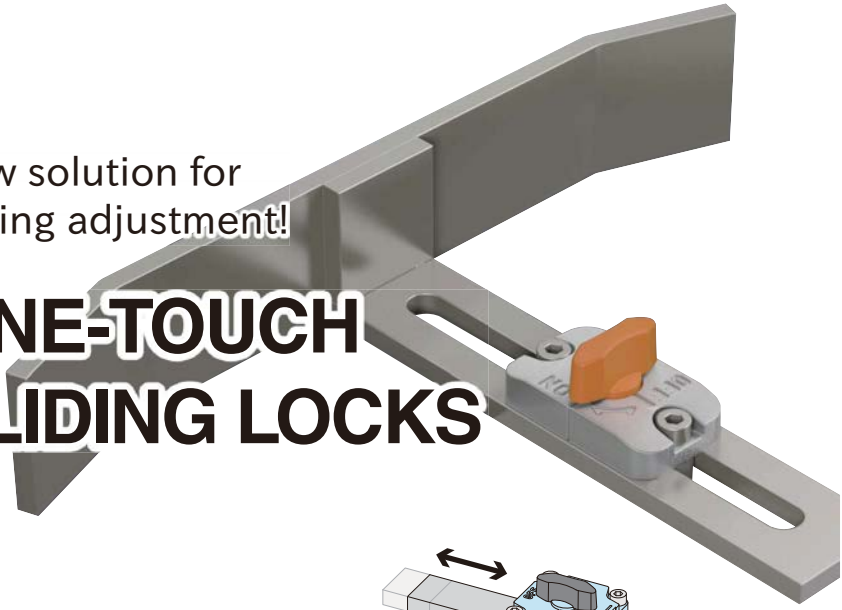
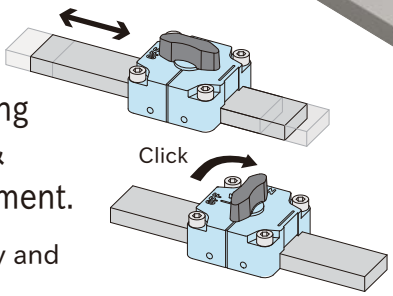
New solution for sliding adjustment!

ONE-TOUCH SLIDING LOCKS

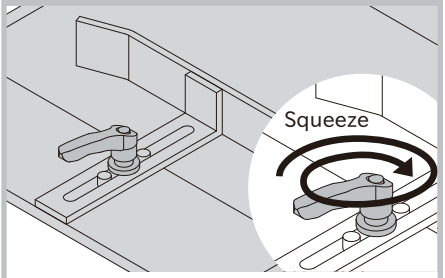




One-touch Sliding Lock is a fixing component that enables easy & secure locking in sliding adjustment.

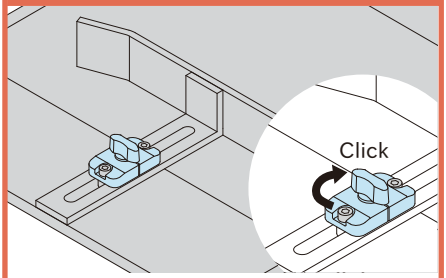
This dramatically improves reliability and safety in set-ups of various devices.

Conventional Method



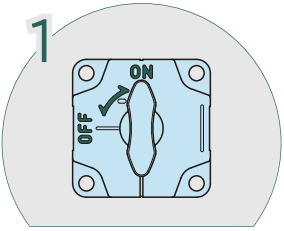
Required to tighten by main force to prevent misalignment.

IMAO Method



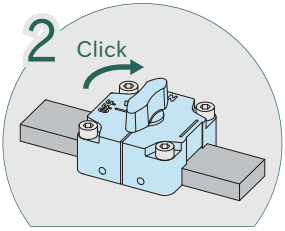
Prevents misalignment with easy operation!

Feature



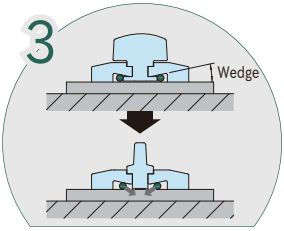
High Visibility

Easy-to-read ON/OFF position



Leveling of Operation

The knob clicks when it is locked/unlocked.

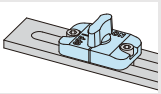


Secure Locking

Secure locking with wedge structure.

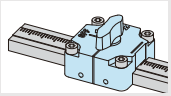
Lineup

Sliding Locks for Slotted Hole



Plastic knob is available in black or orange.
Metal knob is resistant to damage.

Sliding Locks for Square Bar



Can be used with commercially-available square bars

Knob is available in plastic or metal.

Handle is accessible from the side even in tight space.

Application

For Adjusting Camera Position

Sliding Locks For Slotted Hole

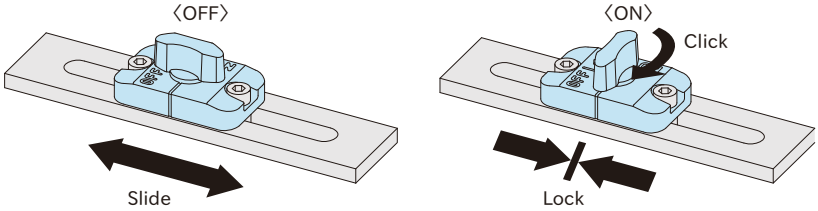
How To Use

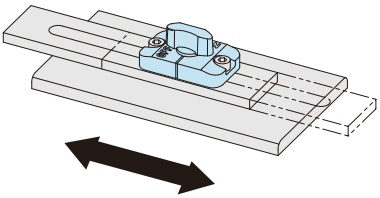
■Operating Instructions



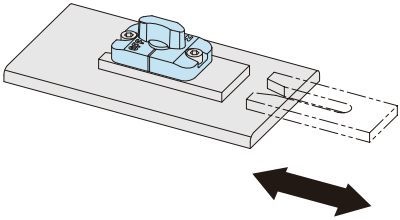
The slide is locked when the knob is at “ON” position.

■Usage Instructions * Refer to the “Note” for safety use.

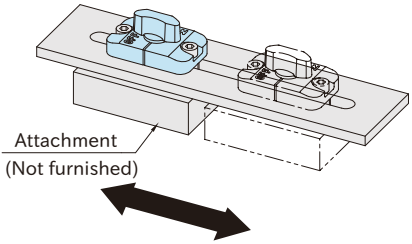
1. Slide the steel bar.



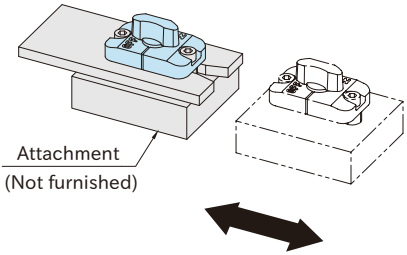
2. Attach/remove the steel bar.



3. Slide the Sliding Locks For Slotted Hole.



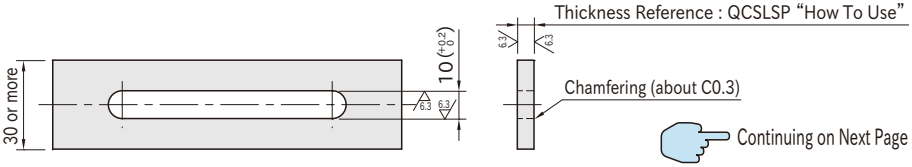
4. Attach/remove the Sliding Locks For Slotted Hole.



■Steel Bar Materials

・Usable Materials: Flat bar (JIS h14 grade) made of SS400, S45C or SUS304 etc.

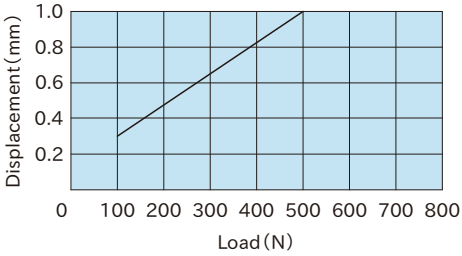
・Machining of slotted hole: Recommended tolerance of the slotted hole to prevent chattering is shown as below. For more accurate sliding, machine the slotted hole to fit the dimension of 10mm(-0.05 to 0) on the bottom of Sliding Locks. Remove the burr around the slotted hole to ensure secure locking.

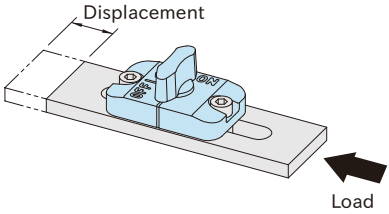


Continuing on Next Page

Performance Curve

■The displacement of steel bar by axial load (Static load from single direction)





Note: The above data is for a flat bar made of SUS304 stainless steel, SS400 steel and S45C steel.
Using an aluminum flat bar, the surface will be scratched or dent by applied load.

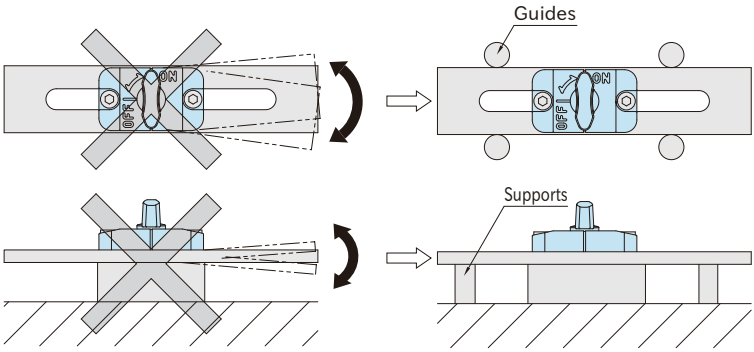
Technical Information

・Heat resistance : Up to 90℃
・Rated load : Up to 500N

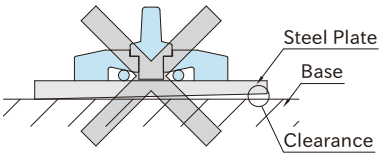
Note

The following conditions may cause displacement increasing or misalignment.

1. Use under slippage or chattering caused by vertical or horizontal loads



2. Use with a clearance between the steel bar and the base when the Sliding Locks at "ON" position.



3. Use under excess shock or vibration

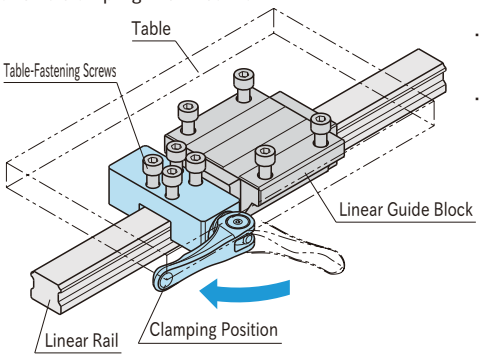
LSM-25	18	15			376
LSM-30	22	18	50	250	729
LSM-35	24	24			932

How To Use

Turning the handle to the clamping position allows clamping the linear rail.



Note

- Unless the handle is turned to the clamping position, the engineered full clamping force can not be distributed.
- When the friction factor is extremely small due to oil or the like applied on the linear rail, the holding force can decrease.
- When a heavy impact load is applied, slippage can occur due to impact strength.

Feature

- Locks positively through simple operation.
- Always provides constant clamping force due to clamping with built-in spring.
- Can be operated in tight areas as shown below, due to no need of space for handle swivel.
- The handle can be changed in orientation every 90˚.

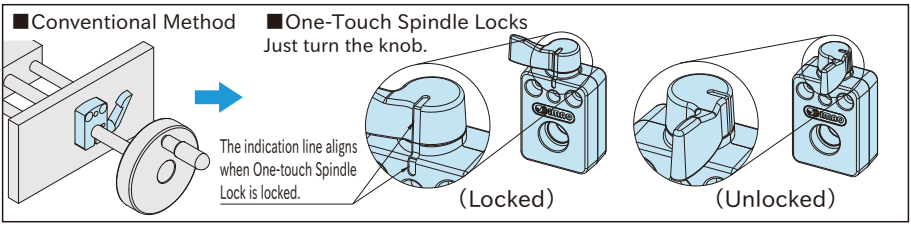
*) Using shafts with tolerances other than h7 may decrease the allowable holding torque or allowable sliding load

Supplied With

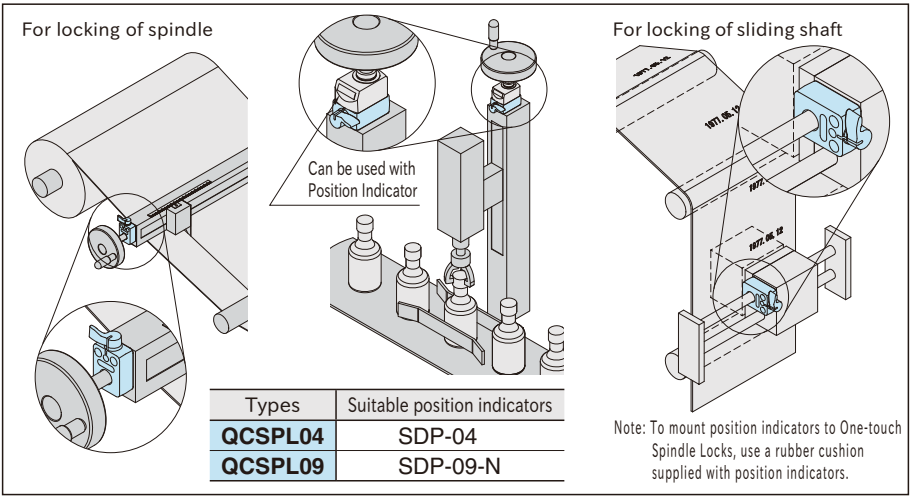
2 of Flat round washer(Stainless Steel)

Feature

・One-touch Spindle Locks enable quick and secure locking of shafts with one click of the knob.
・When One-touch Spindle Lock is operated, the knob clicks and the shaft is locked with a steady force. This provides reliable locking of shafts.
・The knob position and the indication line clearly indicate lock/unlock position.



How To Use



Types	Suitable position indicators
QCSPL04	SDP-04
QCSPL09	SDP-09-N

Note: To mount position indicators to One-touch Spindle Locks, use a rubber cushion supplied with position indicators.

Technical Information

One-touch Spindle Locks can fix both revolving and sliding of shafts.

Size		Allowable Holding Torque (N·m)	Allowable Sliding Load (N)

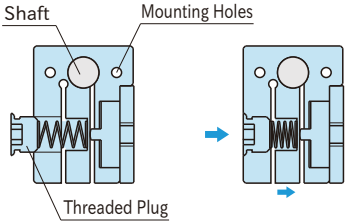
QSCA15-N	2.2	200	450	ϕ15
QSCA16-N	2.4			ϕ16
QSCA20-N	2.6		440	ϕ20

How To Use

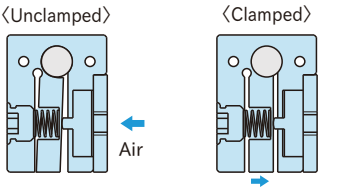
■How to Install



Slide the clamp over the shaft at the unclamped mode, and then fix the body using the 2 mounting holes.

Screwing the plug completely into the hole allows locking the shaft.

■How to Operate



Supplying air allows compressing the spring to get the shaft unlocked.

Releasing the air allows getting the spring to work to lock the shaft.

Feature

- Air pressure to be applied : 0.5 - 0.7MPa
  Recommended to use with a three-way valve.
- The mechanism of spring-pressure clamping and air-pressure unclamping prevents shaft-locking force from getting lowered.
- Connecting air plumbing to multiple Quick Shaft-Locking Clamps installed allows doing clamping/unclamping in one operation.

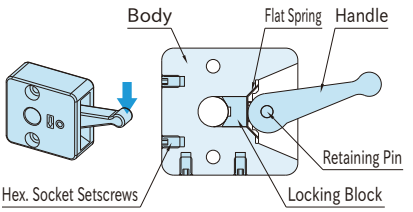
QSC14S	220	ϕ14
QSC15L	428	ϕ15
QSC16L	418	ϕ16
QSC20L	359	ϕ20

Supplied With

Four hex. socket setscrews

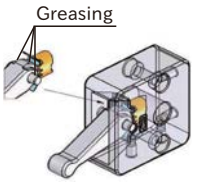
How To Use

- As the handle is turned down, it pushes the locking block toward the shaft for clamping. When the handle is released, the flat spring allows the locking block to be returned to the original position.
- Both faces can be used for installation. Two sides with two tapped holes can also be used for installation(remove the setscrews).



Note

Do not give hammer taps to the handle or extend the handle with a pipe or the like for easier clamping, to avoid any damage.



Dimensions between the shaft-hole center and the sides are not precise. When installing a Quick Shaft-Locking Clamp using tapped holes provided on two sides, make position adjustments using a bracket, shim or the like to prevent conflicts between the shaft hole and a shaft. It is recommended that the cam section and the retaining pin be greased periodically (every about 30,000 cycles) for stable holding torque and sliding load.

Feature

- Designed to positively lock a lead screw or slide shaft with ease.
- Ideal especially in applications where position adjustments are often made, due to better workability than conventional holding methods using adjustable handles or knobs.
- Can also be used in limited space due to no need of space for handle's large swing.

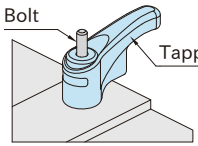
Feature

- The handle is adjustable.
- Handle that allows setting a desired tightening torque.
- When the desired torque is reached, the handle clicks to indicate completed tightening.



- Tapped type has a through hole that can be used with bolts.

How To Use

1.Lift the handle to disengage the teeth from the locking element.

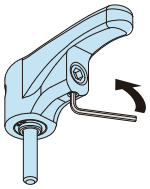
2.Turn the handle to a desired position.

3.When the handle is released, the return spring automatically engages the teeth again for further tightening. The handle can be positioned every 30 degrees.

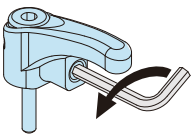
4.Turn the handle to clamp. The handle clicks to indicate completed tightening at desired tightening torque.

How To Set Torque

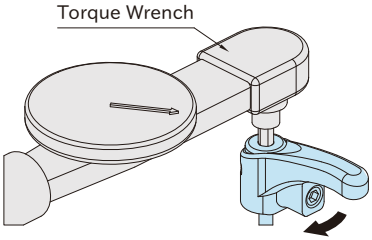
The preset torque is roughly its maximum tightening torque.



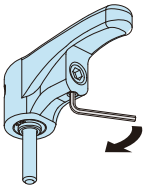
1.Loosen the locking screw by inserting a hex. wrench into the underside of the body.



2.Adjust the torque by turning the torque-adjusting screw in the side of the body.



3.Measure the torque with a torque wrench.
- Connect a torque wrench to the Adjustable-Torque Handle.
- Apply a load in the tightening direction, and fine adjust the depth of torque-adjusting screw to reach the desired torque when the handle clicks.



4.When the desired torque is reached, tighten the locking screw.

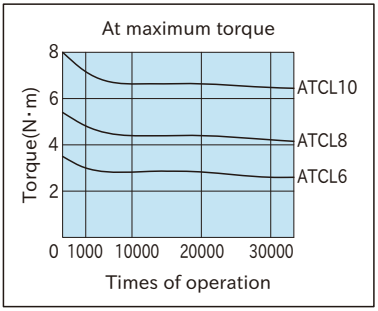
Related Product

- CTK Torque Limiting Knobs
- CP-TCW ADJUSTABLE-TORQUE WRENCHES

Torque Performance

- For initial several thousand operations, the tightening torque decreases.(See the graph below.) Measure the torque regularly, and fine adjust the depth of torque-adjusting screw when needed.
- The tightening torque can vary. (Max.±15%) Not recommended for applications where precise tightening torque is required.

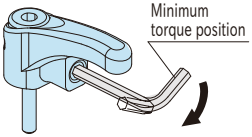
Torque Performance Graph



Note

Adjust the torque-adjusting screw within the torque range. Do not overtighten or overloosen the screw.

■Guide for Torque Adjusting



Size	Rotation
ATCL 6	3/4
ATCL 8	1
ATCL10	3/4

- To reach approx. the min torque, loosen the torque adjusting screw to the same end surface level of the body, then tighten it until you feel light touch of stop. (Ensure that the torque adjusting screw does not protrude from the body when loosening it.)
- To reach approx. the max torque, rotate the torque adjusting screw depending on the above table from the approx. min torque as instructed previously.

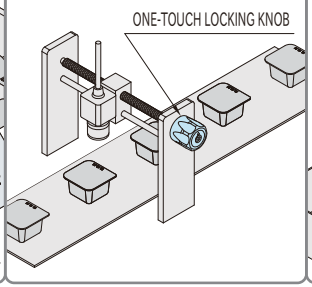
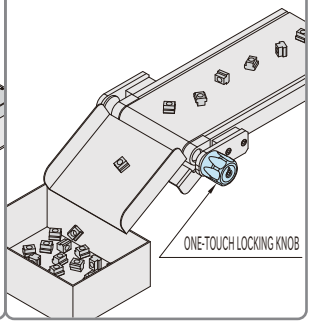
Changes of camera position (Leadscrew)



Changes of shooter angle



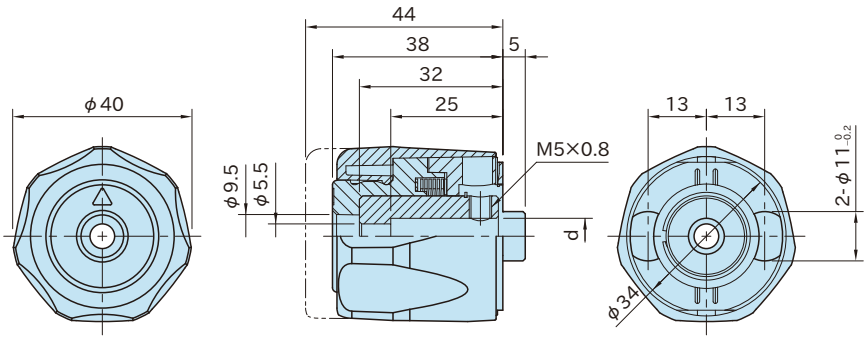
OTLK ONE-TOUCH LOCKING KNOBS

RoHS

IMAO

★Key Point
Secure locking of spindle with one-touch action!

Housing	Boss	Base	Insert
Polyamide (glass-fiber reinforced) Black, Orange	Polyamide (glass-fiber reinforced) Blue	Polyamide (glass-fiber reinforced) Red	SUS304 stainless steel



Part Number		d (H7)	Weight (g)
Black	Orange		
OTLK4008-BK	OTLK4008-OG	8	95
OTLK4010-BK	OTLK4010-OG	10	90

Supplied With

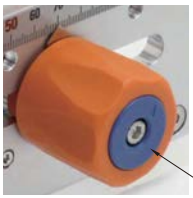
・1 pc. of M5×15 Stainless-Steel Socket-Head Cap Screw
・1 pc. of M5×5 Stainless-Steel Cup-Point Socket-Head Setscrew with Locking Agent

Feature

・OTLK enables one-touch locking and unlocking of spindle.
・Locking and unlocking of spindle can be perceived with click.
・Red and blue colors indicate whether spindle is locked or unlocked.

Red indicates caution to operate machine.

〈Unlocked〉

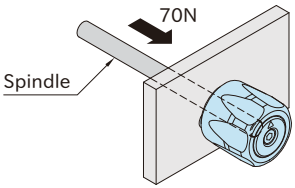


Blue indicates safety to operate machine.

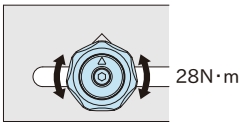
〈Locked〉

Technical Information

・OTLK has 50 teeth inside and it engages at every 7.2˚(= 360˚/ 50).
・OTLK pulls the spindle by the inner spring with 70N force to prevent chattering of the spindle.
Note: The spindle should be fully inserted into the knob for 25mm.

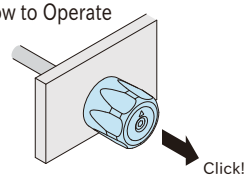


・Allowable moment at locking position: 28N・m (Safety Factor = 5)

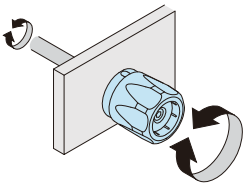


How To Use

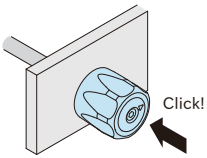
■How to Operate



By pulling the housing until it clicks, the teeth of the knob disengage from the base.

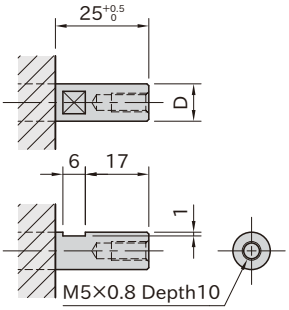


Turn OTLK to rotate the spindle.



By pushing the housing until it clicks, the teeth engage again and lock the rotation of the spindle.

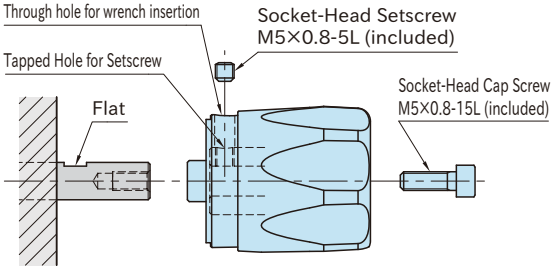
■Mounting Spindle Dimension



Size	D (g6)
OTLK4008	8
OTLK4010	10

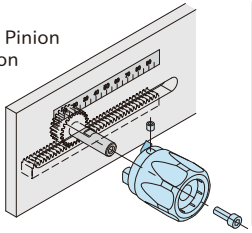
■How to Install

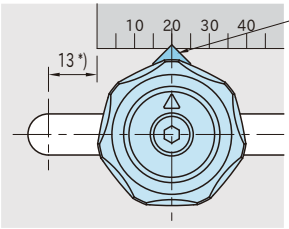
1. Pull the housing and align the through hole on the base and the tapped hole on the insert.
2. Align the flat and the tapped hole on the insert and then mount to the spindle.
3. Fix OTLK temporarily using M5×0.8-15L socket-head cap screw included.
4. Fix OTLK to the spindle temporarily using a setscrew included.
5. Tighten M5×0.8-15L socket-head cap screw fully.
6. Tighten the setscrew fully.



■Mounting Hole Dimension

Rack and Pinion Application

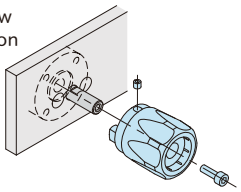


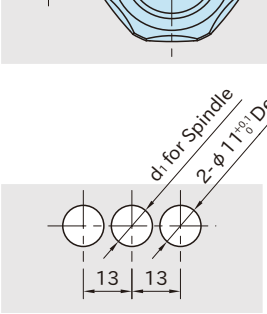


*)Prepare clearance of 13mm or more from the end of a required spindle stroke.

**)Recommended surface roughness is 1.6▽ for the inner surface of the slotted hole.

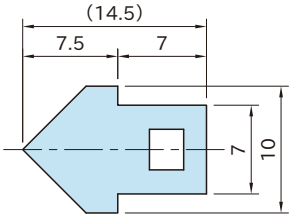
Leadscrew Application





Size	d1
OTLK4008	9
OTLK4010	11

OTLK-A POINTER PLATE



Body
SUS304 stainless steel

Part Number	Weight (g)
OTLK40-A	21

How To Use

- Use with scale plate for reading graduations in radial feeding applications such as rack and pinion.
- Insert Pointer Plate to the slot on the base component of One-Touch Locking Knobs.

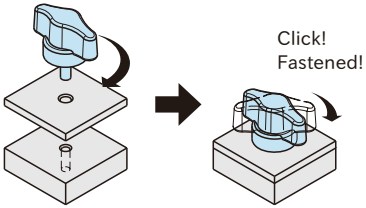
Feature

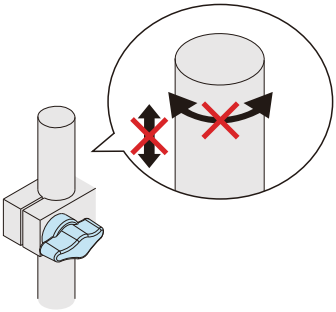
- Can be tightened with the specified torque.
- The spring and the balls inside provide a touch of click when the knob reaches to the specified torque at the tightening end.
- The knob can keep rotated to the desired position after reaching to the specified torque.



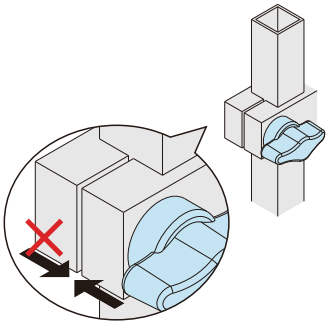
Technical Information

Working temperature : Between 0℃ and 80 ℃

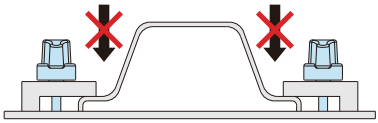
How To Use



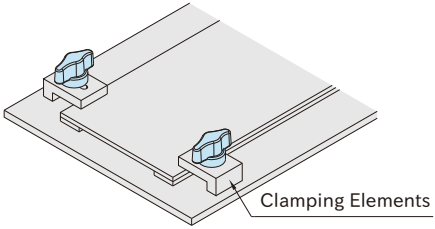
Prevent rotation or slippage.



Prevent deformation or scratch.



Prevent deformation of workpiece.



Can be used with clamping elements.

MECHANICAL LINEAR ACTUATORS

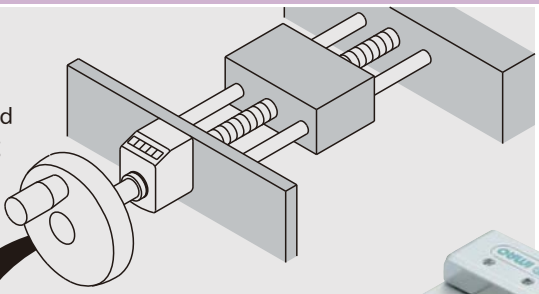
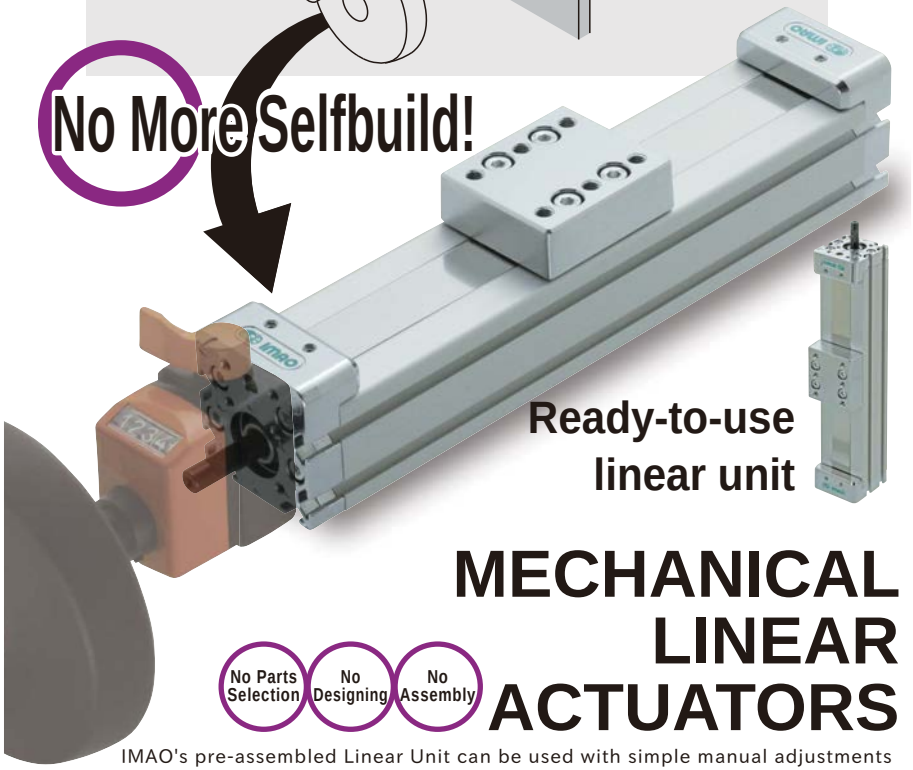
Conventional

Self-made linear actuators required selecting, making and assembling many parts.



No More Selfbuild!



Ready-to-use linear unit

MECHANICAL LINEAR ACTUATORS

No Parts Selection | No Designing | No Assembly

IMAO's pre-assembled Linear Unit can be used with simple manual adjustments without complex processes of parts selection, design and assembly.
The internal parts are protected from dust by its aluminum profile body and dustproof sheet.

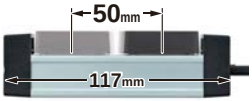
Compact Type!

Compact body fits in a small area!
2 sizes are available.

Stroke: 50mm

Very small!

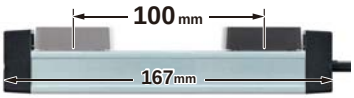
Suitable for a narrow space.



Stroke: 100mm

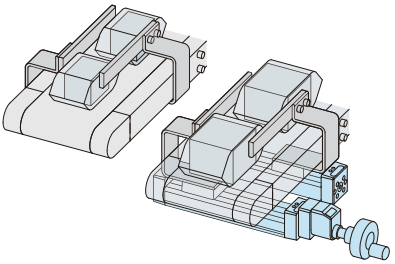
Shorter & lighter body!

Same stroke but shorter & lighter!

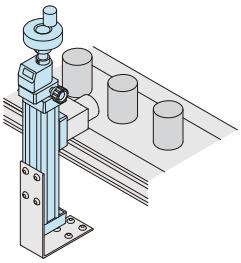


Application Example

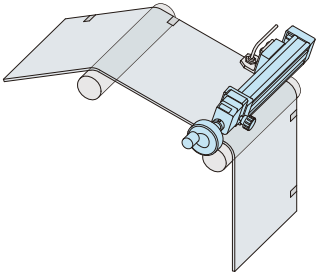
Conveyer Guide Adjustment



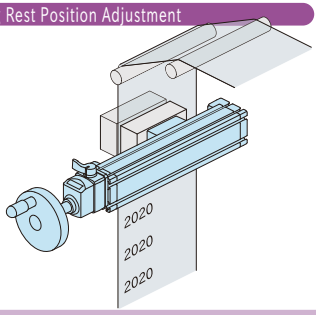
Camera Position Adjustment



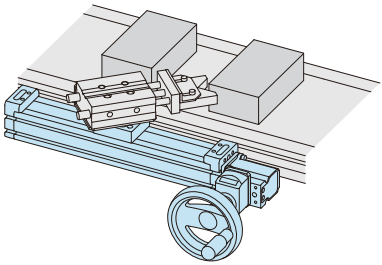
Registration Marks Sensor Position Adjustment



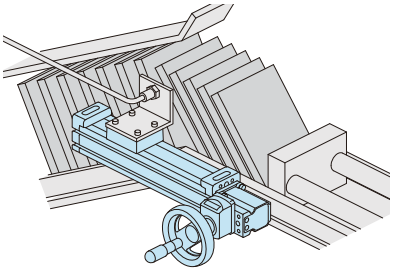
Stamping Rest Position Adjustment



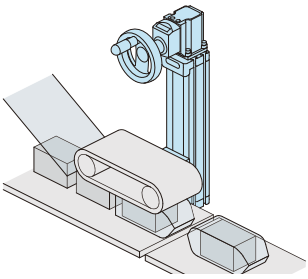
Stopper Position Adjustment



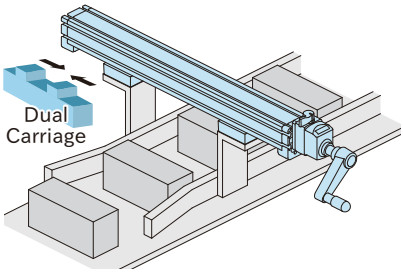
Counting Sensor Position Adjustment



Holder Belt Height Adjustment



Conveyer Guide Adjustment



Lineup

Single Carriage CCW CW

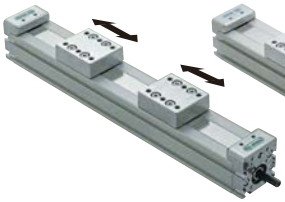
Carriage moves along with rotation of the handle shaft.

With Adjustable Gearbox

Single Carriage
- Customized Stroke
- Adjustable Gearbox
- Adjustable Gearbox & Customized Stroke

Dual Carriage CW

Carriages move towards the center or opposite directions along with the rotation of the handle shaft.



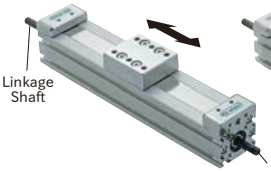
With Adjustable Gearbox

Dual Carriage
- Customized Stroke
- Adjustable Gearbox
- Adjustable Gearbox & Customized Stroke

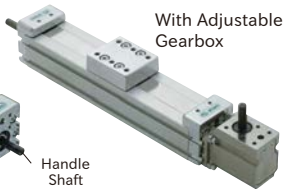
Linkage Single Carriage

CCW CW With Handle Shaft Without Handle Shaft

The actuators can be used in pairs connected at linkage shafts.



With Adjustable Gearbox

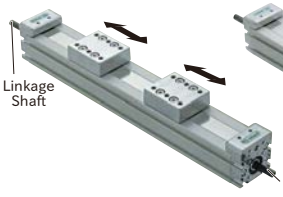


Linkage Single Carriage
- Customized Stroke
- Adjustable Gearbox
- Adjustable Gearbox & Customized Stroke

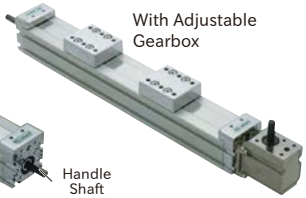
Linkage Dual Carriage

CW With Handle Shaft Without Handle Shaft

Carriages move towards the center or opposite directions along with the rotation of the shaft. The actuators can be used in pairs connected at linkage shafts.



With Adjustable Gearbox



Linkage Dual Carriage
- Customized Stroke
- Adjustable Gearbox
- Adjustable Gearbox & Customized Stroke

Lineup

Compact

CCW CW

Carriage moves along with rotation of the handle shaft.

Compact Linkage

CCW CW

With Handle Shaft Without Handle Shaft

The actuators can be used in pairs connected at linkage shafts.

Mechanism

The abrasion resistance and self-lubricating material of sliding parts give the unit a longer lifetime against the load of up and down or sideways.

- One-Touch Spindle Locks
- Positioning Plate
- Digital Position Indicators
- Adapter Shafts
- Handwheels
- Pair of Stops
- T-Nuts
- Groove Cover

How To Use

- Two carriages move toward the arrow directions by turning Handle Shaft clockwise.
- Two carriages move against the arrow directions by turning Handle Shaft counterclockwise.
- Pitch between two carriages increases or decreases 6mm per rotation of the shaft.
- Gearbox can be positioned at every 90 degree.

*) The shafts are linked and the both ends of the shaft rotate synchronously.

MAGX5040DW

MECHANICAL LINEAR ACTUATORS WITH ADJUSTABLE GEARBOX (Dual Carriage, Synchro-Use, Customized Stroke)

On Request RoHS

IMAO

Ordering Example

MAGX5040DW-C Part Number

290 Stroke S

Feature

- The stroke length of MAG5040DW is customizable.
- For ordering, specify the stroke.

Note

Body length : LB = Stroke S×2+156mm

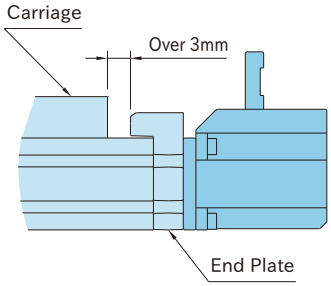
Part Number	S Desired Stroke (by 10mm)	Delivery Time
MAGX5040DW-A	160～220	15 Working Days
MAGX5040DW-B	230～280	
MAGX5040DW-C	290～340	

Reference

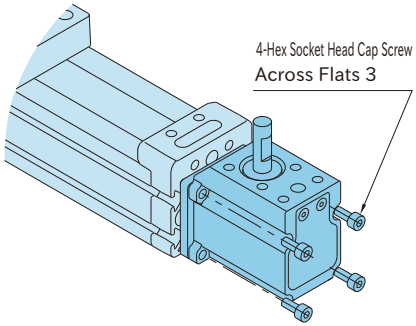
- How To Change Gearbox Position
- Dimensions of Gearbox
- Technical Information of Mechanical Linear Actuators

How To Change Gearbox Position

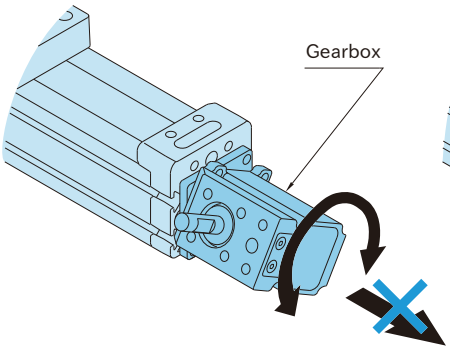
① The clearance between carriage and end plate should be 3mm at least.



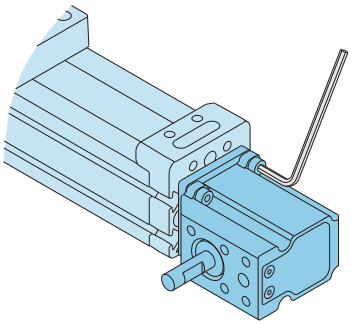
② Remove four hex socket head cap screws attached to the gearbox.



③ The gearbox is free to rotate and change the position at every 90 degree.



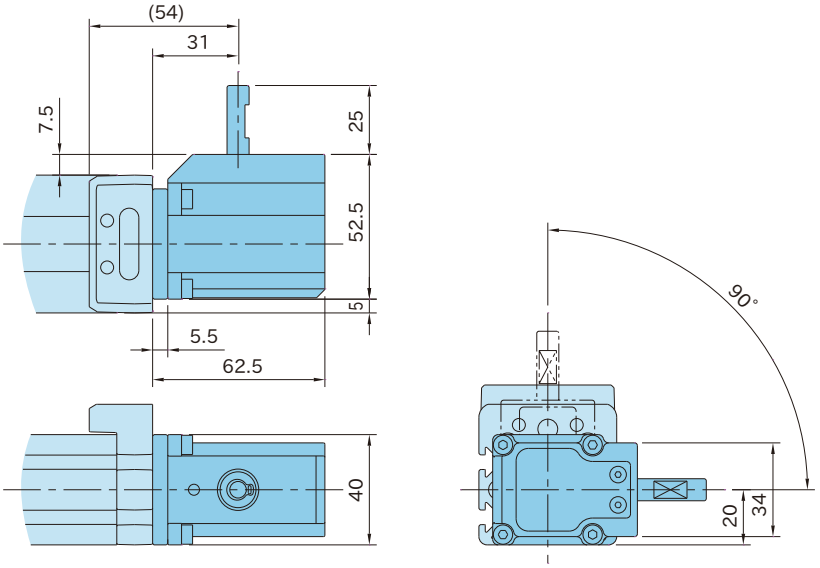
④ Fix the gearbox at the desired position with four hex socket head cap screws.



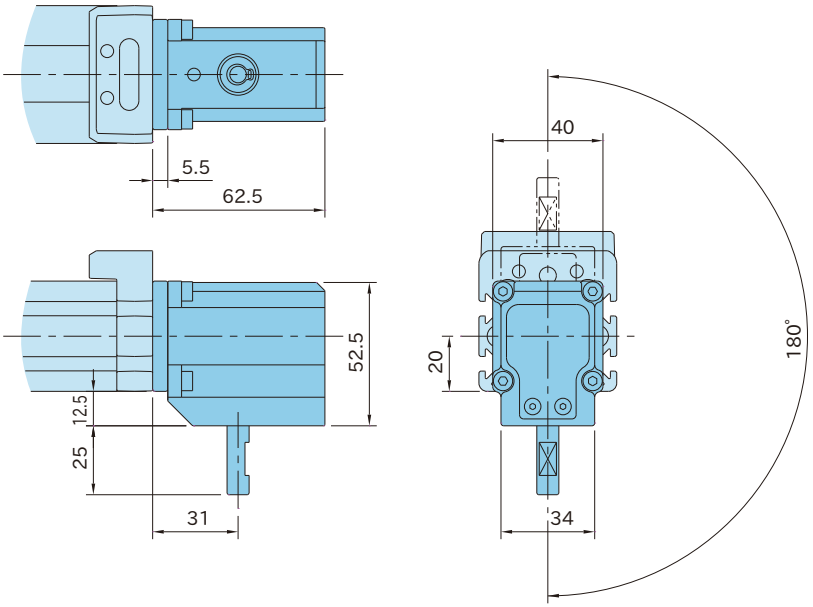
Note: Do not pull the gearbox to the axial direction.

Dimensions of Gearbox

■Dimensions of Gearbox at 90 degrees rotation
(For dimensions of Gearbox at 270 degrees, invert the drawing below.)

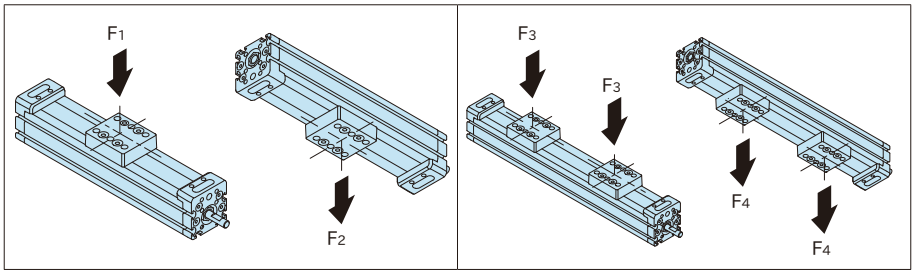


■Dimensions of Gearbox at 180 degrees rotation



Technical Information of Mechanical Linear Actuators

Allowable Load



Type	F1 (N)	F2 (N)	F3 (N)	F4 (N)

Part Number	Weight (g)	Proper Adapter Shaft
MAU3222-SL	58	MAU3222-SH
MAU3222-SL02	78	

Feature

- Avoide the shaft rotating. The brass pad of the knob prevents the shaft from damage.
- Can be used with MAU3222.

Supplied With

2 of M3×0.5-14L Hex Socket Head Screw

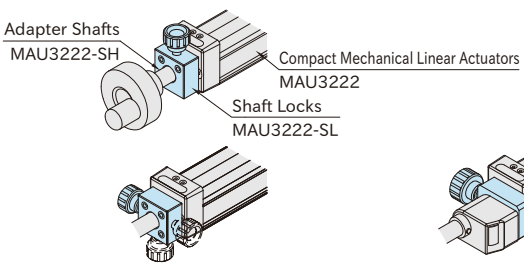
Note

- This product does not have bearing or guiding functions.
- Shocks or vibrations may loosen the lock.
- Can not be used with MAU5040** or MAG5040**.

How To Use

■MAU3222-SL

The position of the knob follows the mounting direction.



■MAU3222-SL02

Use with SDP-02.
Mounting direction can be changed.

AIR ASSISTED CLAMPS

New Ideas for Automated Clamps !

AIR ASSISTED CLAMPS

[Mechanical + Air = Hybrid]

AIR ASSISTED CLAMPS are IMAO's automated clamps that satisfy needs for much more efficiency and automation in production.
Our original mechanical clamp technology in combination with air provides diverse lineup of products.
With our own know-how as a clamping tools manufacturer, we unitized the clamping devices to support making compact automated fixtures.

Feature

Provide 2 advantages with Mechanical + Air Mechanism

Work-friendly

Greater efficiency by automation.

Pneumatic clamping and unclamping improves work efficiency compared to manual operations. Simultaneous controls or remote-operations are possible. Productivity and work efficiency are increased by automation.

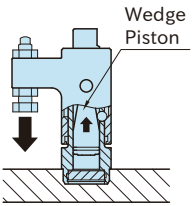
Design-friendly

Unitized to compact design.

Conventional systematic pneumatic clamps required several components of such as cylinders, hooks and guides. IMAO's AIR ASSISTED CLAMPS are unitized our own know-how to a compact design and provide high design-efficiency in fixturing.

COMPACT PNEUMATIC SWING CLAMPS

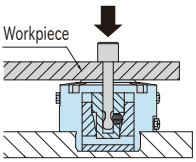
High clamping force with small body



Wedge mechanism provides high holding capacity.

PNEUMATIC PULL CLAMPS

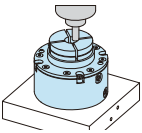
Clamping workpiece with through hole allows multi-surface machining.



Wedge mechanism provides high clamping force.

PNEUMATIC OD HOLDING CLAMPS

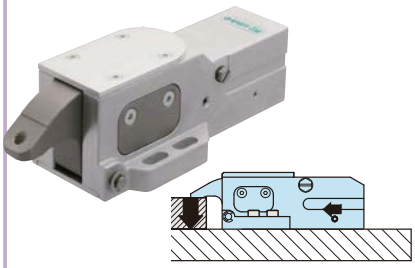
Ideal for irregular-shaped or small workpieces.



Machine the jaw to
custom fit a workpiece.

PNEUMATIC HOLD DOWN CLAMPS

Magnetic sensor mountable.



Wedge mechanism provides
high holding capacity.

More air-assisted products!

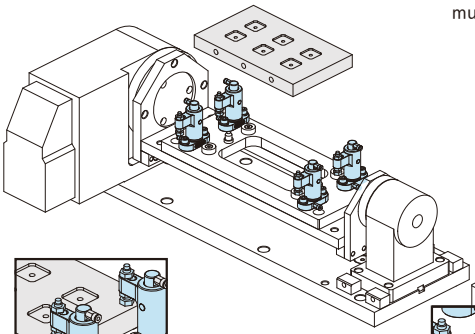
PNEUMATIC FLEX LOCATORS

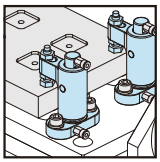
APPLICATION EXAMPLE for AIR ASSISTED CLAMPS

COMPACT PNEUMATIC SWING CLAMPS

Vertical machining center + NC rotary table

Wedge style locking provides machining from 4 sides!

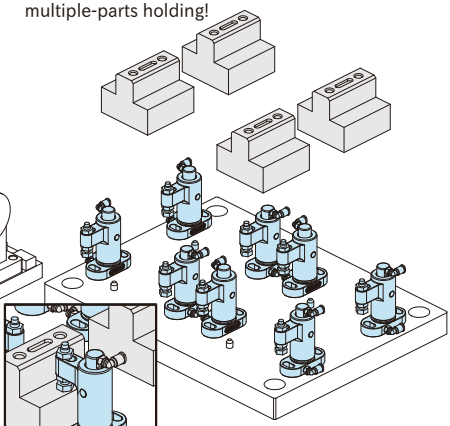


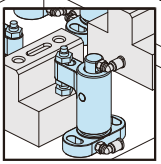


▲ Clamping

Vertical machining center

Small body provides high productivity by multiple-parts holding!



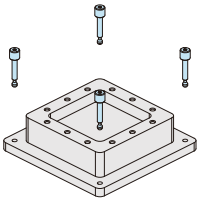


◀ Clamping

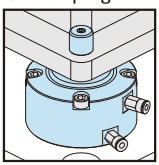
PNEUMATIC PULL CLAMPS

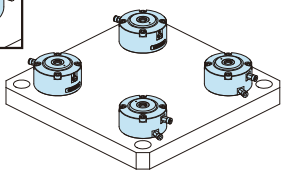
Assembling line

Easy workpiece loading without screw provides shorter setup time.
Stable clamping force offers accurate machining!



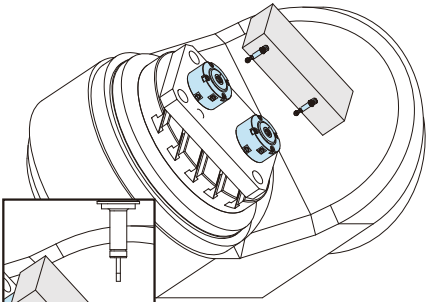
▼ Clamping

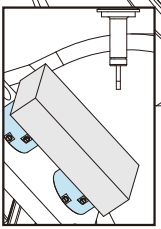




5-axis machining center

Clamping and holding with wedge mechanism enables 5-sides machining!



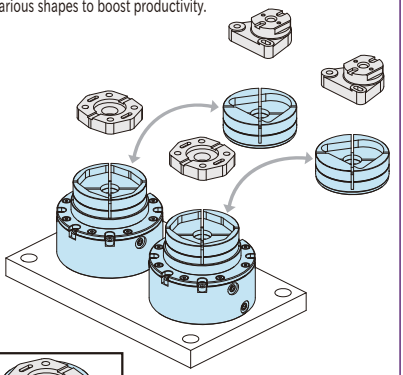


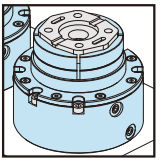
◀ Clamping

PNEUMATIC OD HOLDING CLAMPS

Vertical machining center

Machinable jaws allow clamping workpieces of various shapes to boost productivity.



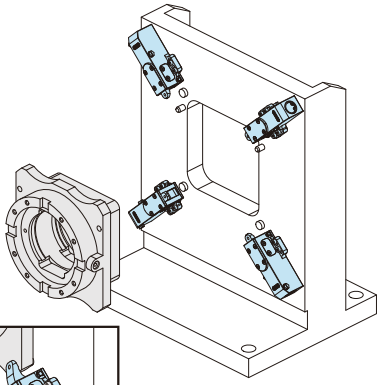


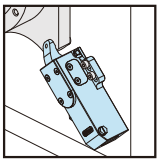
◀ Clamping

PNEUMATIC HOLD DOWN CLAMPS

Horizontal machining center

Less tool interference by low profile body!



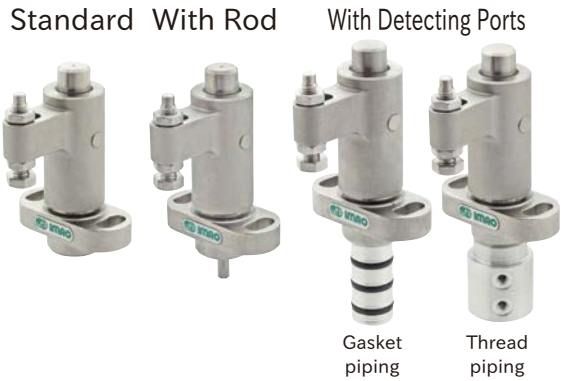


◀ Clamping

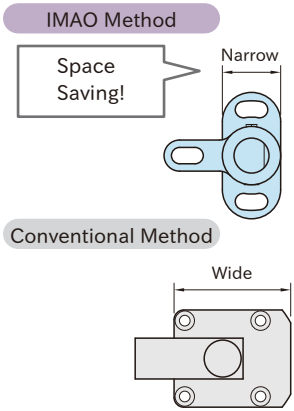
COMPACT PNEUMATIC SWING CLAMPS

COMPACT PNEUMATIC SWING CLAMPS

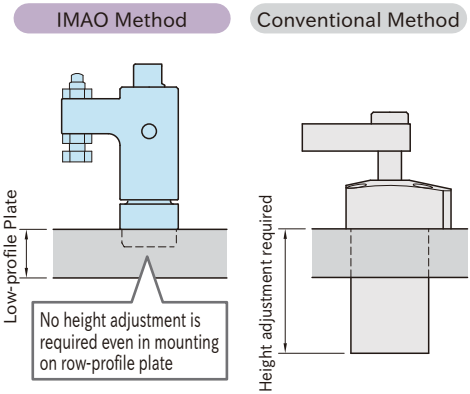
In addition to IMAO's long selling swing clamps, we provide the new Pneumatic Swing Clamps!



Feature 1 Compact Design



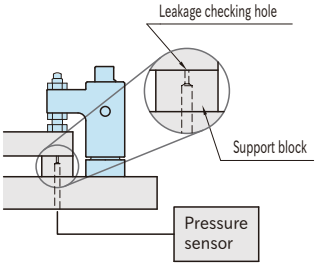
Feature 2 Easy Mounting



Application Example

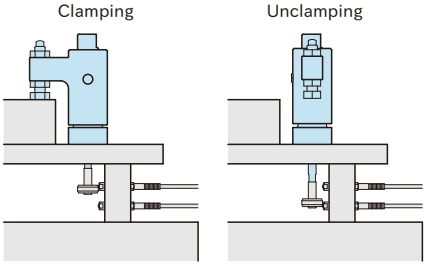
Standard, Air leakage cheking

Pressure sensor detects the clamping/unclamping conditions by preparing air leakage checking hole.



With Rod

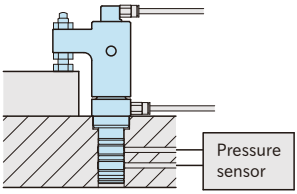
Clamping/unclamping conditions can be detected by switch.



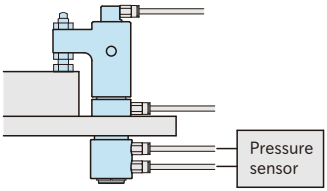
With Detecting Ports

Using with pressure sensors, clamping/unclamping conditions can be detected.

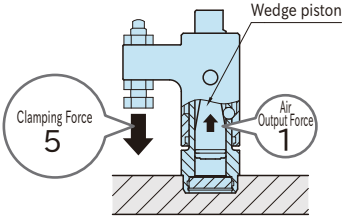
(Gasket piping)



(Thread piping)

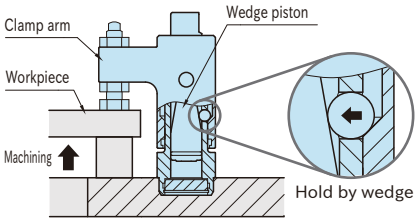


Feature 3 High Clamping Force



Wedge mechanism generates approx. 5 times clamping force of the same size of air cylinder.

Feature 4 High Holding Capacity (Double of clamping force)



The clamp arm stays still against reaction force due to wedge mechanism.

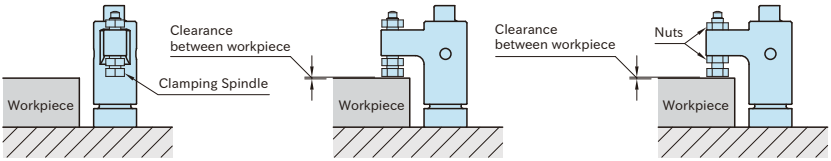
How To Use

■Setting Clearance between Workpiece

A clearance between clamping spindle and workpiece should be roughly half of the clamping stroke.
The clamp arm swings horizontally.
Follow the steps below to adjust the clamping spindle to create proper clearance.



1. Apply air to the unclamping port with an air blow gun to move the clamp to unclamping position.
2. Rotate the arm manually to straight direction, and create an appropriate clearance to the workpiece. Putting a feeler gauge between the workpiece and the clamping spindle facilitates this setting.
3. Fix the clamping spindle with nuts.

AMCH100-5W	22	6			6	6

*) Operating air pressure range: 0.45 - 0.55 MPa.
**) The clamping forces above are at 0.5 MPa.

Supplied With

- 1 of locking ring
- 2 of O-Ring
- 1 of diamond pin

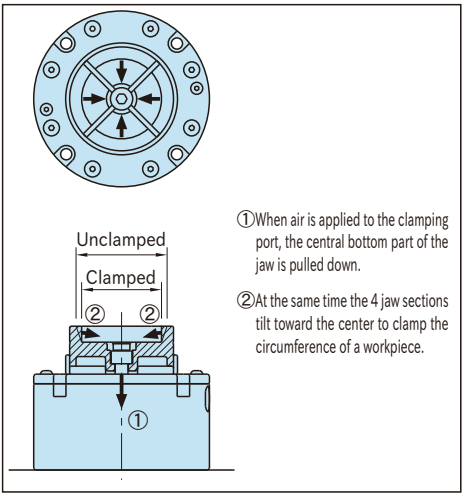
Technical Information

- Workpiece locating repeatability : ±0.03
- Jaw locating repeatability : ±0.02

Note

- Do not actuate clamping without a workpiece inserted to avoid damage and deformation.
- Do not machine the jaw beyond the machinable area.
- Changeable Jaws CP121 are available.
- Use clean air by removing dust with filter or draining with dryer.
- Impure compressed air may cause malfunction of the products.
- Using lubricator is recommended.

Feature



- The diaphragm clamping mechanism allows securely clamping a workpiece with 4 jaw sections.
- Different irregularly-shaped workpieces can be clamped.
- 0.15mm clamping stroke of each jaw section is perfect for clamping of lost-wax parts, die-cast parts, extruded parts, solid-drawn parts, prefinished parts, etc.

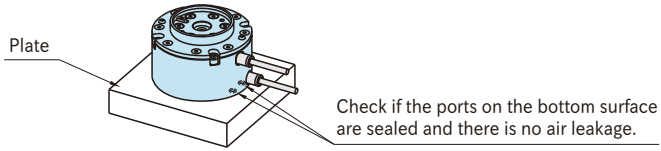
How To Use

■Body Installing

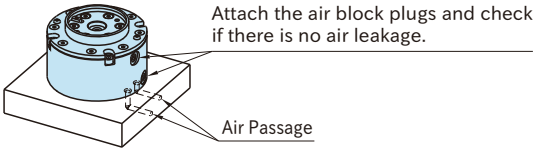
With Side Ports

- ·Attach the furnished o-rings to the bottom ports.
- ·Plate surface must be flat (6.3▽) to get the bottom ports sealed up.
- ·Check if there is no air leakage from the area of the bottom ports.

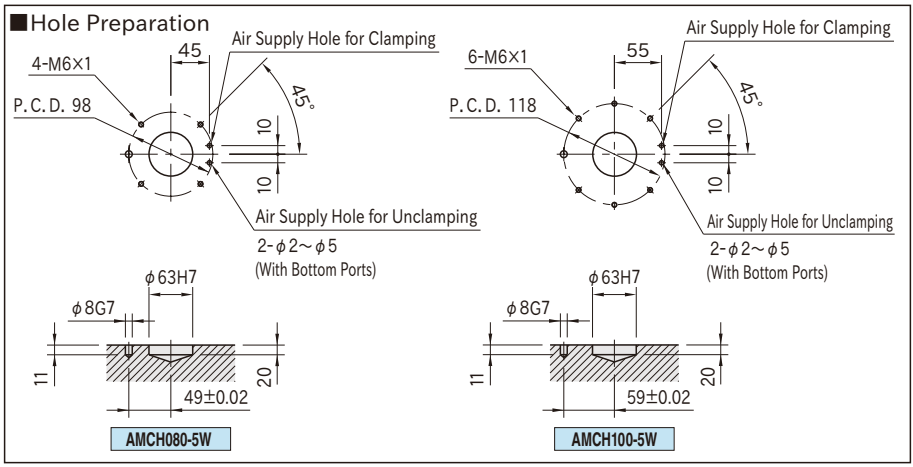


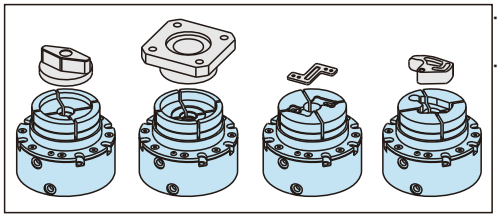
With Bottom Ports

- ·Attach the furnished o-rings to the bottom ports.
- ·Plate surface must be flat (6.3▽) to get the bottom ports sealed up.
- ·Refer to the figure below for the hole positions for ports.
- ·Ensure that the furnished air block plugs are attached to the side ports.



■Hole Preparation



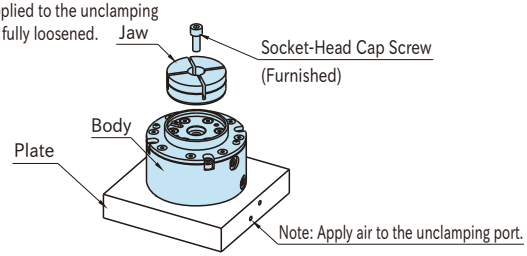


- ·Machinable jaws allow clamping workpieces of various shapes.
- ·Ideal way to hold workpieces for machining on small-size machining centers, tapping centers, small-size 5-axis machines, CNC rotary tables, etc.

Changeable Jaws CP121 are available.

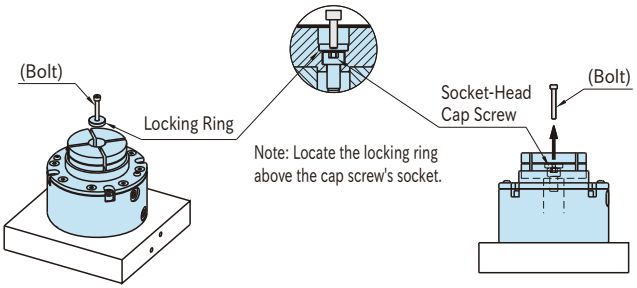
■Jaw Setting

At jaw installation, ensure that air is applied to the unclamping port and the socket-head cap screw is fully loosened.

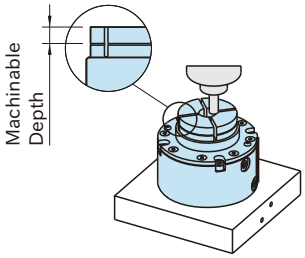


■Jaw Machining

1. Set the locking ring in the jaw.
   (using a bolt facilitates setting)
2. Apply air to the clamping port to clamp the locking ring.
   (After clamping, remove the bolt from the locking ring.)



3. Machine the jaw to custom fit a workpiece.



■Workpiece Setting

1. After machining apply air to the unclamping port to take out the locking ring.
2. Mount a workpiece and then apply air to the clamping port for clamping.

ONE-TOUCH CLAMPS

Any Tools Needed? No Need!

Just Turn the Handle!

Good Design
GOOD DESIGN AWARD 2006

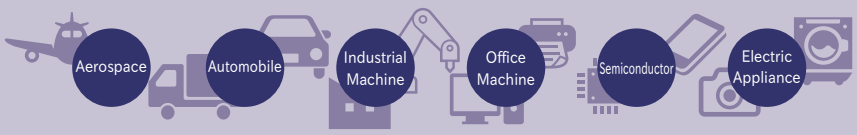
ONE-TOUCH CLAMPS

for Better Efficiency and Lower Costs

Quick Manual Clamps with No Tools

Imao One-Touch Clamps allow clamping and unclamping the workpiece just by turning the handle, without any tools. This one-touch feature helps to slash workpiece loading/unloading time, for drastic setup time reduction and increased productivity.

One-Touch Clamps reduce setup time in machining, assembly, inspection and testing fixtures for various industries.



This extended line of One-Touch Clamps covers a wide range of clamping applications for small parts, and aluminum, zinc, cast-iron or steel parts.

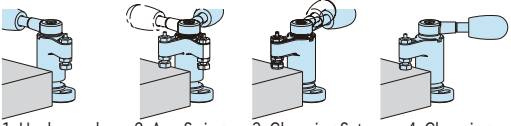
*) Clamping height can be adjusted. The parenthesised values denote clamping height range.

**) Allowable load to operate the handle.

How To Use

■Operation of CW Type (Invert the operation for CCW type.)



1. Unclamped Load or unload a part.
2. Arm Swing — Turn the handle to set the clamp arm in position.
3. Clamping Setup — Continue turning the handle to set the spindle close to the part.
4. Clamping — Turn the handle to the recommended clamping position.

■How to Change Handle Position

The dodecagonal socket in the hub of the handle allows changing the handle position by 30˚.

■Allowable Loads in Machining of Workpiece Bottom

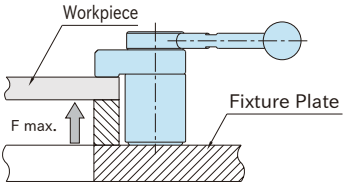
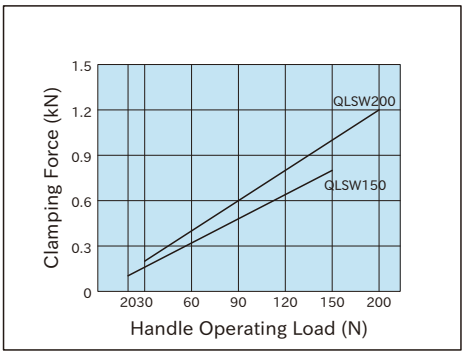
Type	Allowable Force To Workpiece Bottom (Per Clamp)
QLSW150	max. 2.1kN
QLSW200	max. 2.7kN



Performance Curve

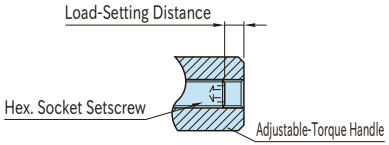
■QLSL STANDARD HANDLES

⚠ The performance curves shown below do not denote the guaranteed performance.

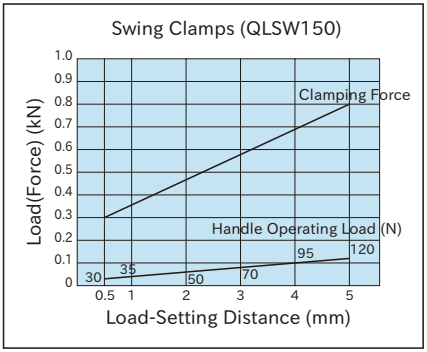


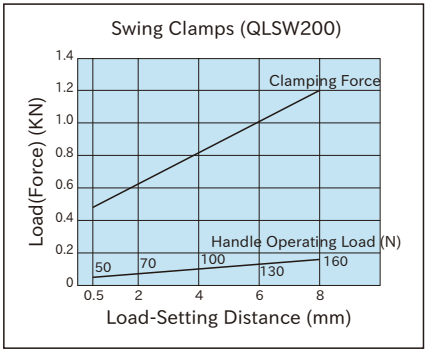
■QLTL ADJUSTABLE-TORQUE HANDLES

Use a force gauge when measuring handle-operating loads.



⚠ The performance curves shown below do not denote the guaranteed performance.





Clamp Arm

■Custom Clamp Arm

Recommeded Dimensions

Type	L_5 (Max.) *)	L_6	W	H_6	L_7	d (F8)	R_2	B	H_7	M_3	C
QLSW150	45	15	30	12	32	10	11	1.5	5	M4×0.7	C5
QLSW200	55	20	40	16	42	16	15	2	6	M5×0.8	C8

*) See page QLSW-SH clamping force vs. clamp - arm length

■Installation / Removal

To install a clamp arm,

1. Fit it onto the shaft getting the stop pin received in the stop-pin slot provided on the clamp-arm bottom.
2. Place the adaptor head onto the shaft getting the shaft fitted into the shaft-receiving pocket in the adaptor head, and then lock the adaptor head using a hex. socket head cap screw.
3. Tighten the ball plungers inside the clamp arm.
   To remove the clamp arm, follow the above steps back.

How to Determine H_5 Dimensions

Type	H_2	H_5

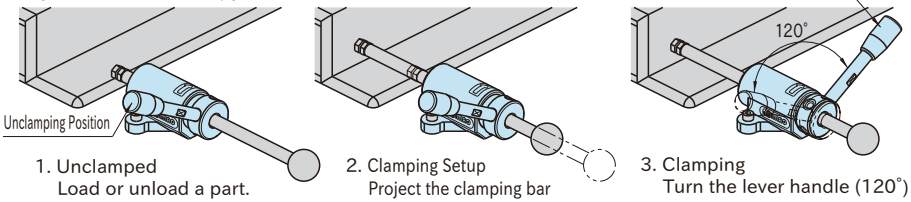
QLRC-12L	CCW				

How To Use

■Operation of CW Type (Invert the operation for CCW type.)



1. Unclamped
Load or unload a part.

2. Clamping Setup
Project the clamping bar until it contacts the part.

3. Clamping
Turn the lever handle (120°) to the clamping position.

Feature

・Spring-loaded clamp that provides constant clamping force.
・Long clamping-bar projection range allows clamping a recessed part.
・Clamping Bars are not included (must be ordered separately).
(When using your own clamping bar, ensure that the diameter is finished to a h9 or better tolerance)

Note

When a reaction force (F) becomes greater than a clamping force, the clamping bar slides back to get a part unclamped.

Type	Clamp Releasing Force
QLRC-08-L	F>0.2kN

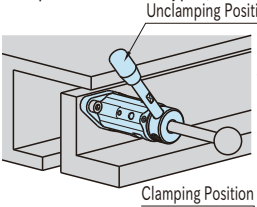
QLRCF-12L	CCW				

Feature

- Can be used in both vertical and horizontal clamping applications.
- The horizontal style is also available. (see page for QLRC)
- Spring-loaded clamp that provides constant clamping force.
- Long clamping-bar projection range allows clamping a recessed part. (When using your own clamping bar, ensure that the diameter is finished to a h9 or better tolerance)

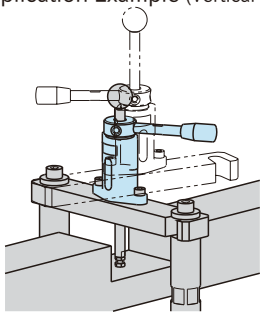
How To Use

■Operation of CW Type (Invert the operation for CCW type.)



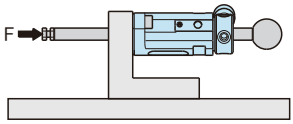
1. Unclamped
   Load or unload a part.
2. Clamping Setup
   Project the clamping bar until it contacts the part.
3. Clamping
   Turn the lever handle (120°) to the clamping position.

■Application Example (Vertical Clamping)



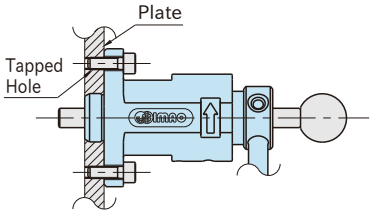
Note

When a reaction force (F) becomes greater than a clamping force, the clamping bar slides back to get a part unclamped.

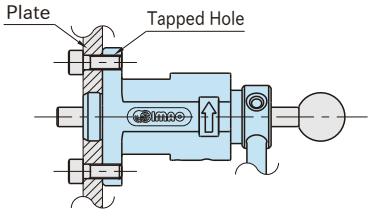


Type	Clamp Releasing Force
QLRCF-08-L	F>0.2kN
QLRCF-12-L	F>0.7kN
QLRCF-08	F>0.5kN
QLRCF-12	F>1.4kN

■How to Mount



- Face Mounting
  (Use cap screws with one-size smaller threads than mounting-hole threads.)



- Back Mounting
  (Use cap screws with threads of the same size as mounting-hole threads.)

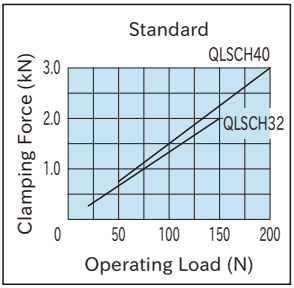
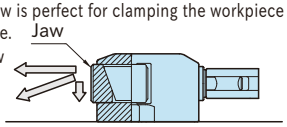
***) Allowable load to operate the handle

Performance Curve



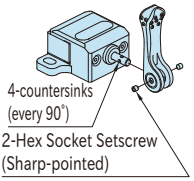
Feature

- The cam handle allows fast clamping in single operation.
- Spring-loaded light-duty style allows distributing constant clamping force.
- Standard style allows adjusting clamping force depending on operating loads.
- Precision-ground jaw is perfect for clamping the workpiece on its finished surface.
- In clamping, the jaw provides downward force to prevent part lift.

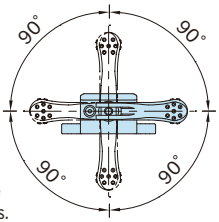


Changing Handle Position

The handle shaft has 4 countersinks which are provided every 90˚for 4 options of handle position.

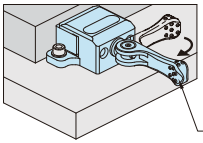


Note: The setscrews must be tightened into 2 countersinks.



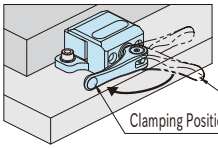
How To Use

■Standard



Turning the cam handle allows the jaw to advance to the workpiece for clamping. For clamping forces, see the performance curve.

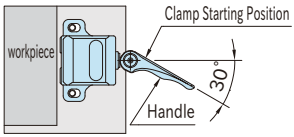
■Light-Duty



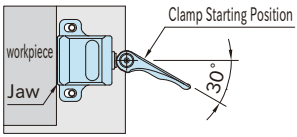
Turning the handle to the clamping position allows clamping the workpiece with constant clamping force.

Installation Instructions for Light-Duty Style

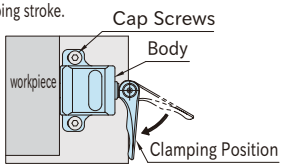
The steps below must be followed so that constant clamping force can be distributed within the clamping stroke.



Set the handle to the clamp starting position.



Contact the jaw to the workpiece.



Fasten the clamp with hex socket-head cap screws, and then turn the handle to the clamping position for clamping.

QLSCL-R LOW-PROFILE CAM EDGE CLAMPS

RoHS

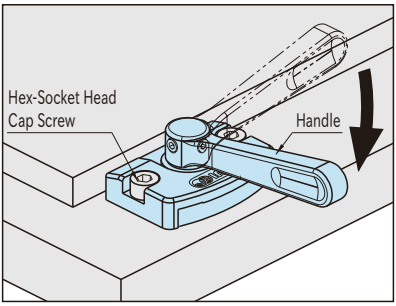
*) Allowable load to operate the handle

Feature

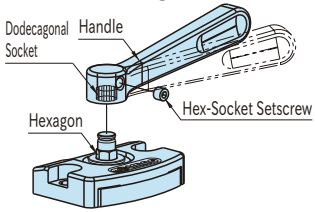
Designed to prevent part lift.

How To Use



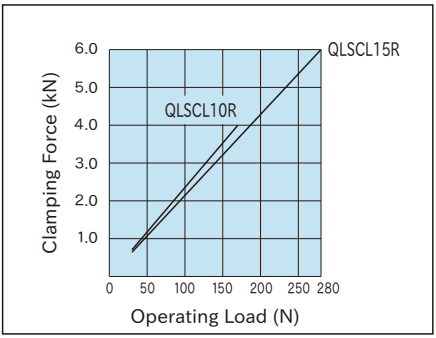
Turning the handle allows the cam to project the jaw for clamping. When the handle is turned back for unclamping, the loaded spring lets the jaw return to the original position.

■How to Change Handle Position



The handle has the dodecagonal socket to allow changing the handle position by 30˚

Performance Curve



Note

Ensure that mounting surfaces are finished to $\overset{6.3}{\nabla}$ (6.3a) or better, without any scratches or dents.

QLSCL-NR LOW-PROFILE CAM EDGE CLAMPS

*) For ordering, specify workpiece thickness.

How To Use

■ Ordering Example

QLPDH400-12-20.5

Shank Size | L Dim.

※ QLPD400-12 for 20.5mm thickness workpiece.

Note

The length of L dimension should be decided depending on the workpiece thickness.

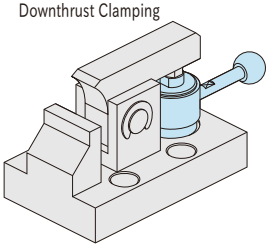
・QLTL ADJUSTABLE-TORQUE HANDLES

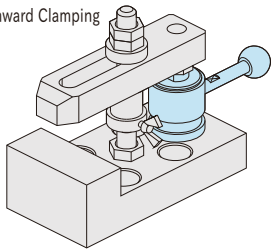
How To Use

■Application Examples

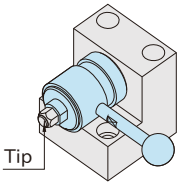
Downthrust Clamping



Downward Clamping

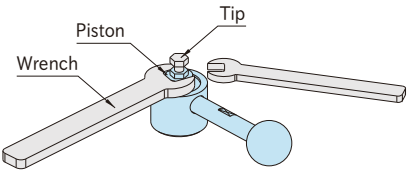


Sideways Clamping



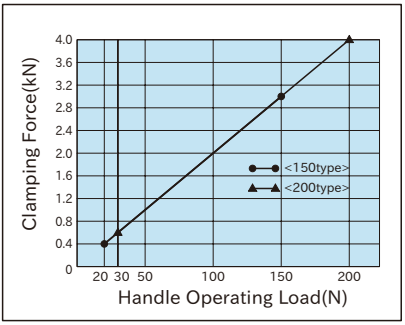
Note

- When installing a tip on the piston, lock the piston using a wrench to prevent the clamp from receiving any torque.
- The piston goes down when turning handle over clamping end.



Performance Curve

■QLSL STANDARD HANDLES



⚠ The performance curves shown below do not denote the guaranteed performance.

■QLTL ADJUSTABLE-TORQUE HANDLES

⚠ The performance curves shown below do not denote the guaranteed performance.

- Use a force gauge when measuring handle-operating loads.

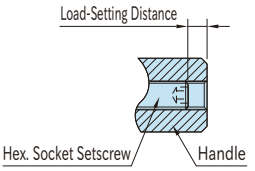
QLTL160	137

■Proper One-Touch Clamps

- SWING CLAMPS <QLSW>
- PULL CLAMPS <QLPD>
- PUSH CLAMPS <QLPU>

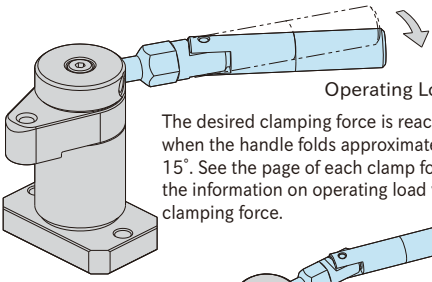
How To Use

Turning the setscrew inside the handle allows adjusting the torque to set a desired clamping force.

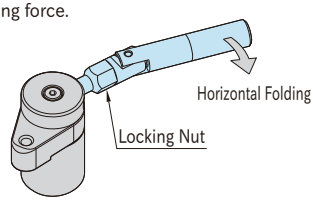


[Operating-Load Setting Range]
QLTL120/QLTL120-RL : 30N to 120N
QLTL160/QLTL160-RL : 50N to 160N

Note : Ensure that the operating load is not set below the lower limit to prevent the handle from returning to the unclamping position due to shock load generated during the transfer of machine pallets.

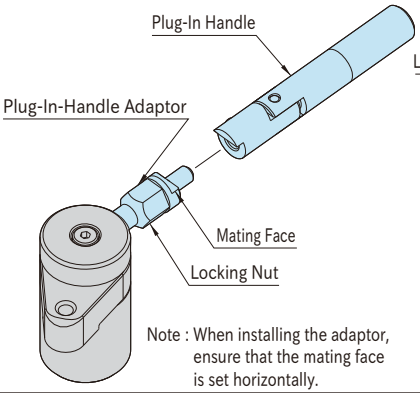


The desired clamping force is reached when the handle folds approximately 15˚. See the page of each clamp for the information on operating load vs. clamping force.

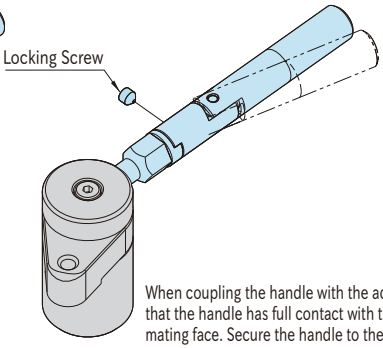


Note : Ensure that the handle is set to fold horizontally.

Plug-In Handle Installation



Note : When installing the adaptor, ensure that the mating face is set horizontally.



When coupling the handle with the adaptor,ensure that the handle has full contact with the adaptor's mating face. Secure the handle to the adaptor using the lockingscrew if necessary.

SNAP CLAMPS

Click-Out Clamping!

SNAP CLAMPS

A click indicates completed clamping.

Hold-Down Style

Push-Pull Style

Hold-Down (Mini) Style

IMAO's Snap-On System

As the handle is operated, the built-in balls move following the slit to let tension accumulate on the flat spring. When the balls are positioned in the clamping pockets, the accumulated tension is released and transformed into clamping force.

Hold-Down Standard Double-Lock

Push-Pull Double-Lock

Hold-Down Mini Single-Lock

Stable Clamping!

Provide the firm clamping force at every operation.

Smooth Clamping!

A small handle operating load generates a maximal clamping capacity.

Secure Clamping!

A snap-on system allows clamping a part with no errors.

Highly Durable!

New Sturdy Clamps! 500,000 Cycles Cleared! *)

Due to one-piece body construction and heat treatment to the pressurizing members, Snap Clamps can work with little wear-out, deformation or deterioration, and do not get shaky or weak in clamping even after long-term use.
Snap Clamps are far more durable than traditional toggle clamps or the like, and can be used without maintenance.

*) Result of Imao original proof test (note that cycle life varies with operating conditions and environments).

One-Piece Body

Visible Clamping Force

A label number stands for clamping force.

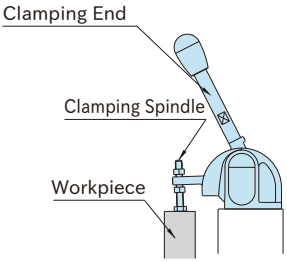
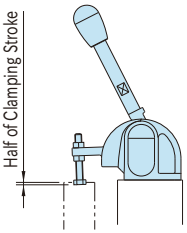
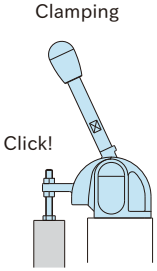
How To Set Handle To Recommended Clamping Position



1. Set the clamping spindle to contact a workpiece at clamping end position.



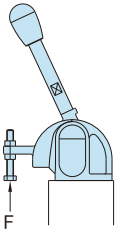
2. Project the clamping spindle by about half of the clamping stroke and tighten the nut.



3. Setting Completed

Note

- The clamping forces and handle operating loads stated above can vary by up to ± 20%.
- When the reaction force(F) becomes greater than the clamping force, clamping is lifted.



Part Number	Clamping Is Lifted When :
QLSND28-02	F > 20N
QLSND28-05	F > 50N
QLSND30-03	F > 30N
QLSND30-06	F > 60N

Feature

- The long handle facilitates clamping operation.
- The handle is locked at the unclamping position.
- Uses a snap-on system (double locking)

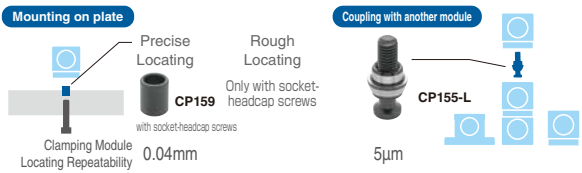
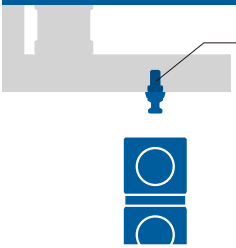
CP152-12080	60	80	15
CP152-16100	80	100	25



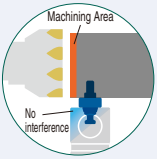
Clamping Screws



Mount to bottom of workpiece to pull it down

For machining close area to clamping module

To avoid tool interferences, raise workpieces with Riser Screws.



Tapered Clamping Screws (Round)

For Precise Locating

With Riser

CP155-L CP155-LS

Workpiece Locating Repeatability (μm)
5

Tapered Clamping Screws (Diamond)

For Precise Locating

With Riser

CP155-D CP155-DS

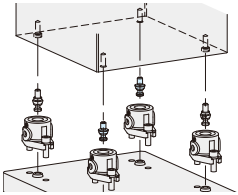
Workpiece Locating Repeatability (μm)
5 (Should be used with round type.)

Clamping Screws

No locating function.

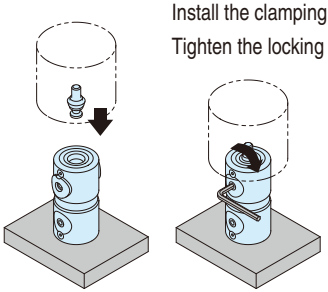
With Riser

CP156 CP156-S

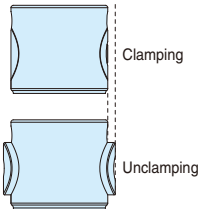


Clamping Operation

Install the clamping screw on the workpiece and mount it on the clamping module.
Tighten the locking screw of the clamping module.



Clamping / Unclamping is visible.



Allowable Cutting Force & Workpiece Weight of CLAMPING MODULES

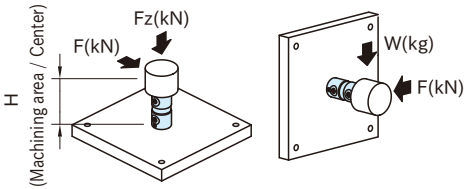
Ensure the cutting force and the workpiece weight are within the allowable level.
The values below are only the strength of the body of clamping modules.
The rigidity of the whole fixtures and the workpiece are not considered.
Use the values as a guide for setting appropriate machining conditions.

1 Module

*) Prepare a locator when the workpiece gets big rotating force.

**) The use of Riser Screw is not recommended because allowable cutting force and allowable workpiece weight will be decreased.

■Horizontal ■Vertical



Part Number	Allowable Cutting Force F(kN)	Allowable Cutting Force Fz(kN)	Allowable Workpiece Weight W(kg)

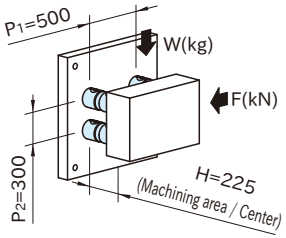
CP152-16100	$2\times(0.60P_1+1080)/H$		$2\times(0.60P_2+1080)\times100/H$			

Calculation Example



・Vertical mounting
・4 pcs of CP151-12125 (height 125mm)
・Pitch:
P_1=500mm
P_2=300mm
・Workpiece center: H=225mm
・F direction cutting force: 3kN
・Workpiece weight: 375kg

<Allowable Cutting Force F>
$F= 2\times(0.3\times P_1+540)/H$
$= 2\times(0.3\times500+540)/225$
$= 6.13kN$
*) Cutting force 3kN is within allowable value (6.13kN).

<Allowable Workpiece Weight W>
$W= 2\times(0.3\times P_2+540)\times100/H$
$= 2\times(0.3\times300+540)\times100/225$
$= 560kg$
*) Workpiece weight 375kg is within allowable value (560kg).

- CP157 Tapered Bushings

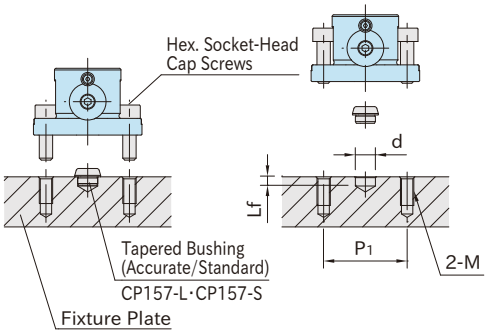
For workpiece raising

- CP155-LS Tapered Riser Screws
- CP155-DS Tapered Riser Screws
- CP156-S Riser Screws

How To Use

・Use CP157-L Tapered Bushing (Accurate) for precise locating.
・Use CP157-S Tapered Bushing (Standard) for rough locating.

■Mounting-Hole Dimension

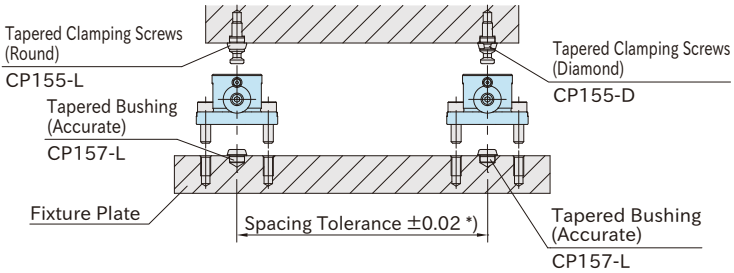


Part Number	d (H7)	Lf	M	P1
CP150-06025	8	5.5	M 6X1	42
CP150-08040	12	5.5	M 8X1.25	50
CP150-12063	18	6.5	M12X1.75	75
CP150-16080	22	8	M16X2	100

Note:The tolerance of dimension "d" for Tapered Bushing (Standard) should be $^{+0.1}_{0}$.

■Spacing Tolerance

Spacing tolerance for CP157-L Tapered Bushings (Accurate) should be ±0.02.
*) Spacing tolerance for CP157-S Tapered Bushings (Standard) should be ±0.1.



■Tightening Order

Tighten the locking screws in order of 1(Round Tapered Clamping Screw)→ 2(Diamond Tapered Clamping Screw)→3(Clamping Screw)→4(Clamping Screw).
Note: For CP150 -06025, use 2 pieces of Round Tapered Clamping Screw.
Tighten these 2 screws in the same order to maintain the locating repeatability.

How To Use

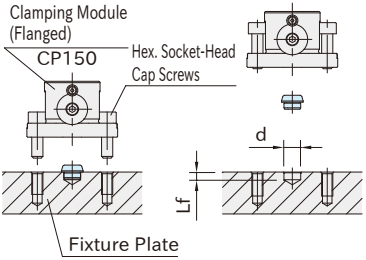
- Can be used for mounting CP150 Clamping Module (Flanged) on the fixture plate.
- Use Accurate Type for precise locating of a clamping module.
- Use Standard Type for rough locating of a clamping module.

■Mounting-Hole Dimension

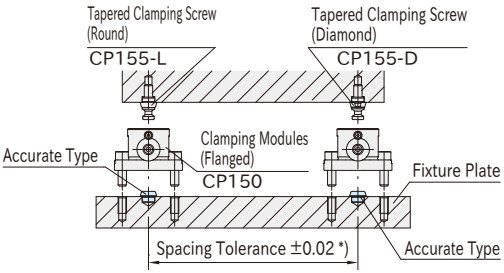


Size		d (H7)	Lf
CP157	06001	8	5.5
	08001	12	5.5
	12001	18	6.5
	16001	22	8

Note: The tolerance of dimension "d" for Standard Type should be $^{+0.1}_{0}$.

■Spacing Tolerance

Spacing tolerance for Accurate Type should be ±0.02.
*) Spacing tolerance for Standard Type should be ±0.1.



■Application Example

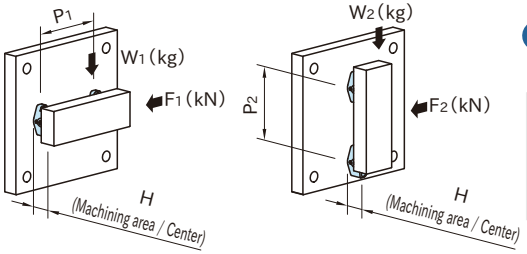
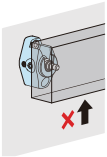
Allowable Cutting Force & Workpiece Weight of CLAMPING MODULES (Hook)

Ensure the cutting force and the workpiece weight are within the allowable level.
The values below are only the strength of the body of clamping modules.
The rigidity of the whole fixtures and the workpiece are not considered.
Use the values as a guide for setting appropriate machining conditions.

2 Modules



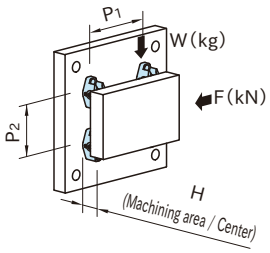
Note



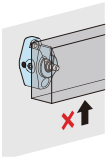
Heavy cutting force in the open direction may cause workpiece move.

Size	Allowable Cutting Force			Allowable Workpiece Weight		
	F_1 (kN)	F_2 (kN)	Max (kN)	W_1 (kg)	W_2 (kg)	Max (kg)
CP160-08040	(0.24P_1+ 432)/H	240/H	3.2	240×100/H	(0.24P_2+ 432)×100/H	320
CP160-12063	(0.50P_1+ 900)/H	500/H	6	500×100/H	(0.50P_2+ 900)×100/H	600
CP160-16080	(1.00P_1+1800)/H	1000/H	10	1000×100/H	(1.00P_2+1800)×100/H	1000

4 Modules



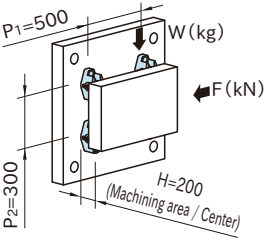
Caution



Heavy cutting force in the open direction may cause workpiece move.

Size	Allowable Cutting Force		Allowable Workpiece Weight	
	F (kN)	Max (kN)	W (kg)	Max (kg)
CP160-08040	2×(0.24P_1+ 432)/H	6.4	2×(0.24P_2+ 432)×100/H	640
CP160-12063	2×(0.50P_1+ 900)/H	12	2×(0.50P_2+ 900)×100/H	1200
CP160-16080	2×(1.00P_1+1800)/H	20	2×(1.00P_2+1800)×100/H	2000

Calculation Example



- 4 pcs of CP160-12063R/L (height 63mm)
- Pitch:
  P_1=500mm
  P_2=300mm
- Workpiece center: H=200mm
- F direction cutting force: 5kN
- Workpiece weight: 600kg

<Allowable Cutting Force F>
F=2×(0.5×P_1+900)/H
=2×(0.5×500+900)/200
=11.5kN
*) Cutting force 5kN is within allowable value (11.5kN).
<Allowable Workpiece Weight W>
W=2×(0.5×P_2+900)×100/H
=2×(0.5×300+900)×100/200
=1050kg
*) Workpiece weight 600kg is within allowable value (1050kg).

Reference

Feature and How To Use in later page

Feature

・Each clamping screw has commercially available O-ring to prevent rotation and keep the direction of arrow marking.
・O-ring should be replaced by the customer when it is worn.

How To Use

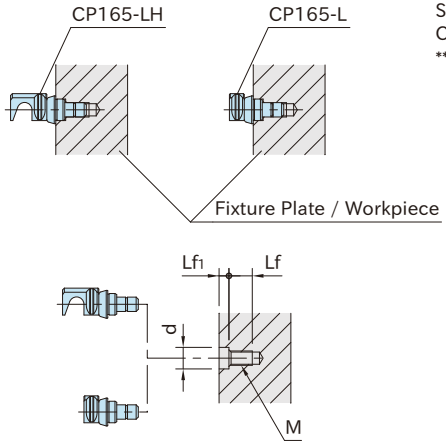
Tapered Clamping Screws

Can be used for locating fixture plate or workpiece.

Clamping Screws

Can be used for just clamping.

■Mounting-Hole Dimension

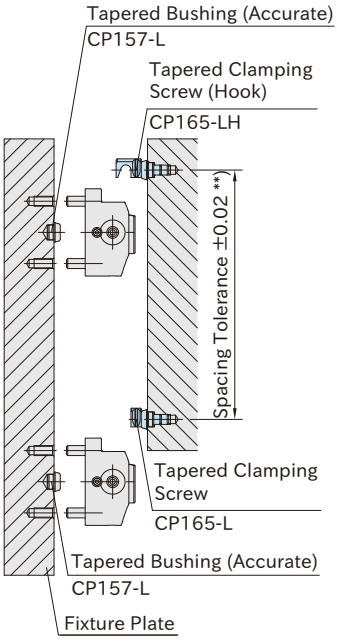


Size	d *)	Lf	Lf1	M
CP165-08001	12	13	5.5	M 8×1.25
CP165-12001	18	19	6.5	M12×1.75
CP165-16001	22	23	8	M16×2

*) ・The hole tolerance should be $^{-0.010}_{-0.025}$ when Tapered Clamping Screws are always mounted on the fixture plate. Fixture plate and tapered bushing fit tightly and keep the repeatability without chip incursion.
・The hole tolerance should be H7 when mounting on workpiece. Tapered bushing can be easily mounted / removed.

■Spacing Tolerance

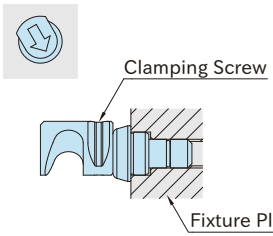
Spacing tolerance should be ±0.02 for Tapered Clamping Screws.
**) Spacing tolerance should be ±0.2 for Clamping Screws.



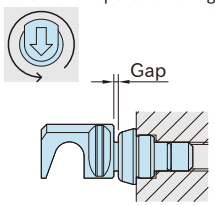
Note: Refer to the next page for the layout of the products.

■Installation

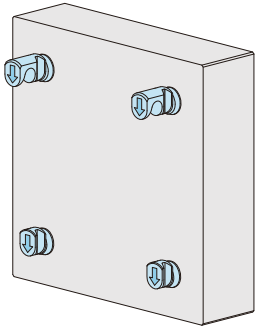
1. Fully tighten the clamping screw on fixture plate or workpiece.



2. Turn the screw counterclockwise within one turn until the arrow marking points downward. (There is a gap between clamping screw and tapered bushing.)



3. Install the clamping screws into the clamping modules.



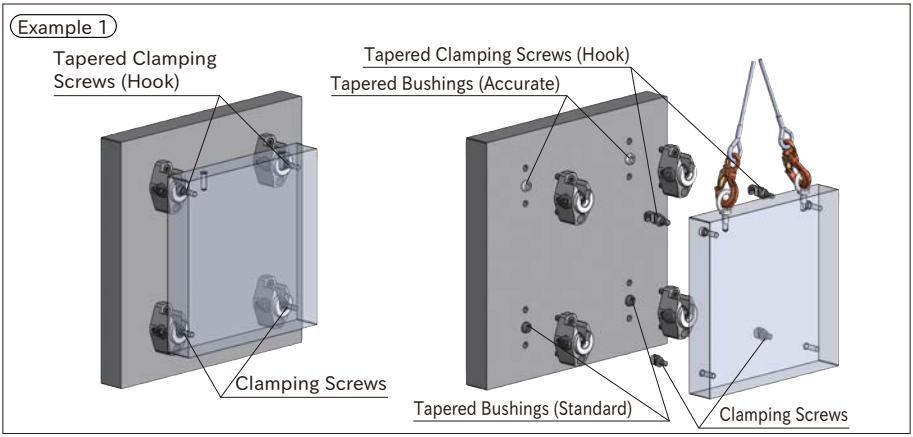
■Application Example

Tighten the hook type clamping screw firstly.
The first one becomes the reference.
The products should be positioned as shown below.
CP165-LH CP165-L Tapered Clamping Screws and CP157-L Tapered Bushings (Accurate) should be used together, and CP166-H CP166 Clamping Screws and CP157-S Tapered Bushings (Standard) are also.

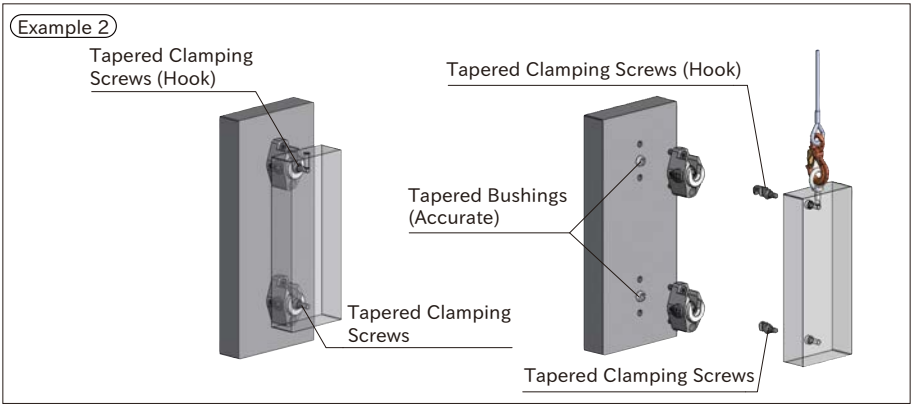
Note

Do not remove the hoists until the unit fully clamped.

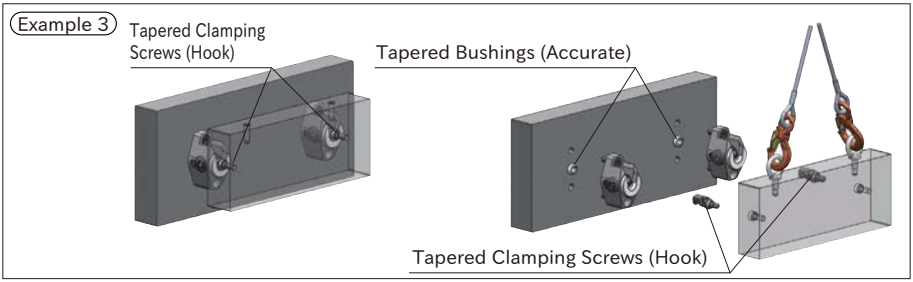
Example 1



Example 2



Example 3



Note: Use CP166-H CP166 Clamping Screws when locating of workpiece is not necessary.

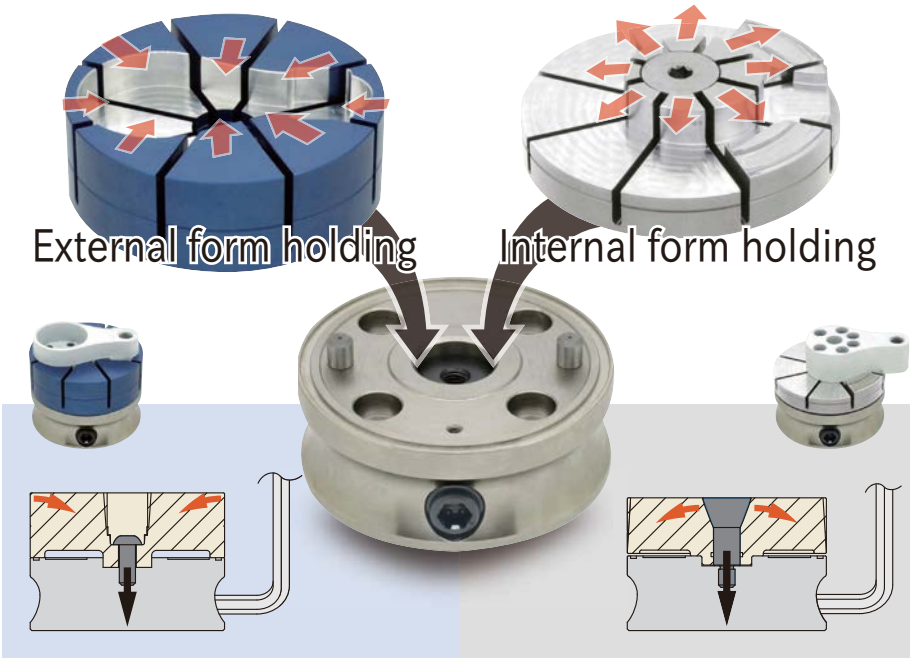
FORM HOLDING CLAMPS

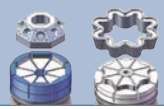


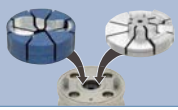
Clamp any shape! Hold on external / internal form!

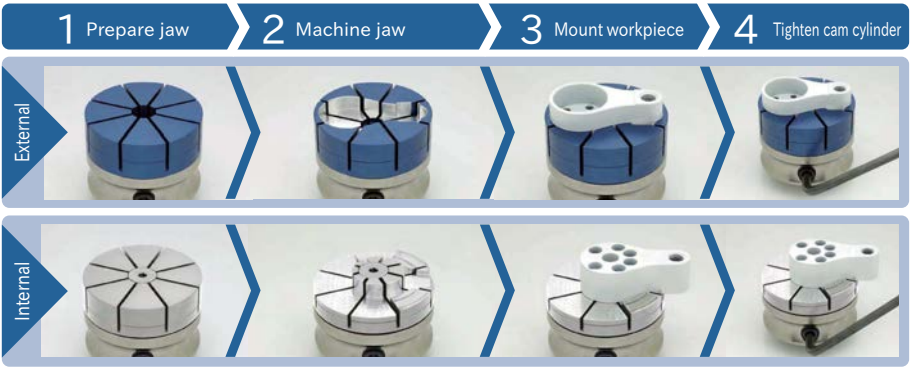
FORM HOLDING CLAMPS

Form Holding Clamps with a machinable jaw are perfect for irregular-shaped workpieces. Simple workholding on external/internal form eliminates the need for custom fixtures.

Secure clamping for odd shaped workpieces	Versatile workholding by changing jaw	Quick clamping by tightening cam cylinder
		

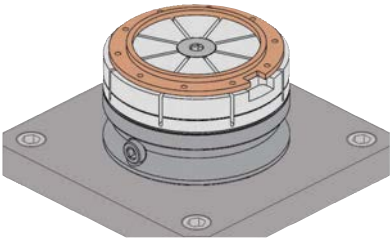






Application Example

Clamping Low Profile Workpiece



Internal Form

8 jaw sections distribute clamping force to workpiece for deformation prevention.

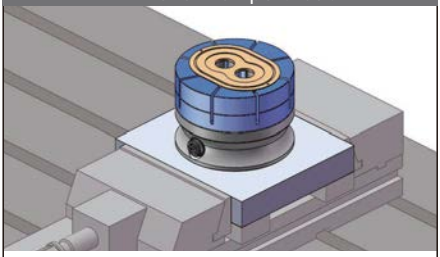
Note to control the tightening torque using adequate tools in reference to the data provided by the performance curve.

Multipul Workholding

External Form

Small cylindrical body allows the multi-piece clamping in limited space.

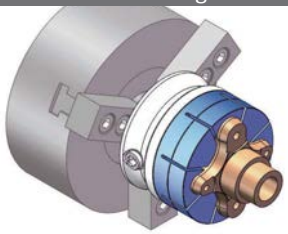
Fixture for Temporal Job



External Form

Can be mounted on the existing vise by attaching the clamp on plate.

Fixture for Turning Lathe



External Form

Can clamp odd shape that a chuck does not clamp.

CP122 Mounting-on-lathe Adapter is available.

CP125 FORM HOLDING CLAMPS

RoHS

Supplied With

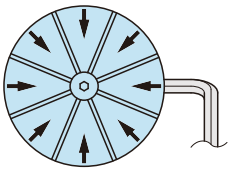
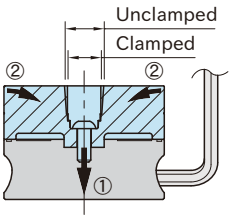
- 1 pc. of O-ring
- 1 pc. of Locking Ring
- 1 pc. of Hex Socket Button Head Screw

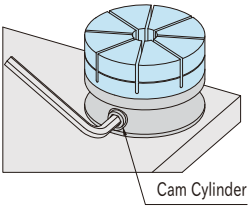
Feature



- The diaphragm clamping mechanism allows securely clamping a part with 8 jaw sections.
- 0.15mm clamping stroke of each jaw section is perfect for clamping of lost-wax parts, die-cast parts, extruded parts, solid-drawn parts, prefinished parts, etc.



①When the cam cylinder is tightened, the central bottom part of the jaw is pulled down.
②At the same time the 8 jaw sections tilt toward the center to clamp the external form of workpiece.

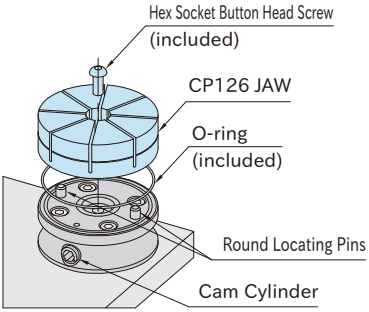


How To Use

1.Jaw Mounting

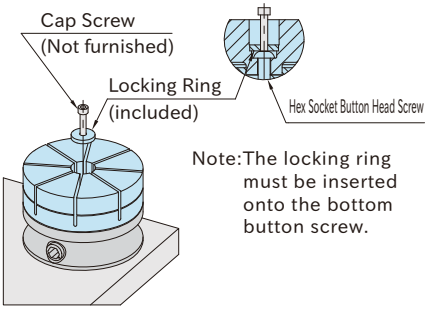
・Insert an O-ring to the groove on top surface of the Form Holding Clamp.
・Set a Jaw putting its locating holes onto the round locating pins and fix it with a hex socket button head screw.

Note: At jaw installation, ensure the cam cylinder is fully loosened by turning counterclockwise until it stops.



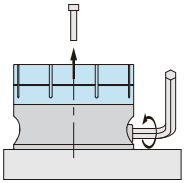
2.Jaw Machining

2-1. Set the locking ring in the jaw.
(Using a screw facilitates setting.)

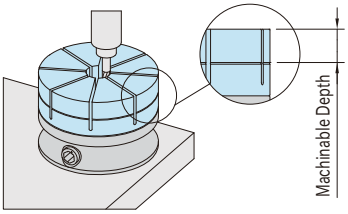


Note:The locking ring must be inserted onto the bottom button screw.

2-2. ・Tighten the cam cylinder to clamp the locking ring. (Recommended Tightening Torque:15N・m)
・After clamping the screw should be removed from the locking ring.

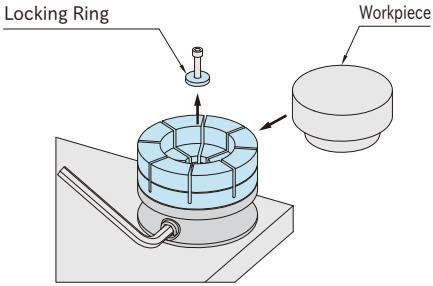


2-3. Machine the jaw to the contours of workpiece.
(Do not machine the jaws beyond the machinable depth.)

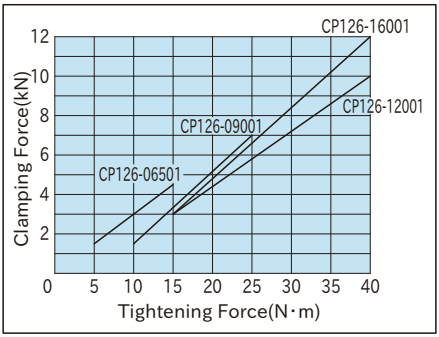


3.Workpiece Loading

・Loosen the cap screw to remove the locking ring.
・Load the workpiece and tighten the cam cylinder for clamping.



Performance Curve



Note

Do not tighten the cam cylinder without the workpiece set to prevent damage and deformation. Tightening with the torque beyond the allowable screw torque will lower the durability of the jaw.

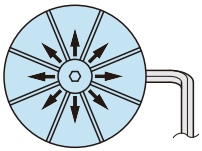
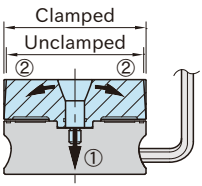
CP127-09001B	27	35	M10X1.5	11	16	8	80	CP127-09001
CP127-12001B	29	41		13			100	CP127-12001
CP127-16001B	33	47	M12X1.75	14	18	10	150	CP127-16001

Feature

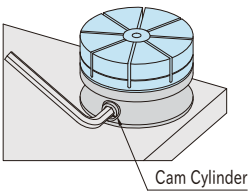




・The tapered screw expands the jaws towards eight directions to hold different irregularly-shaped workpieces securely.
・0.15mm clamping stroke of each jaw section is perfect for clamping of lost-wax parts, die-cast parts, extruded parts, solid-drawn parts, prefinished parts, etc.

①When the cam cylinder is tightened, the tapered screw is pulled down.

②At the same time the 8 jaw sections expand to clamp the internal form of workpiece.

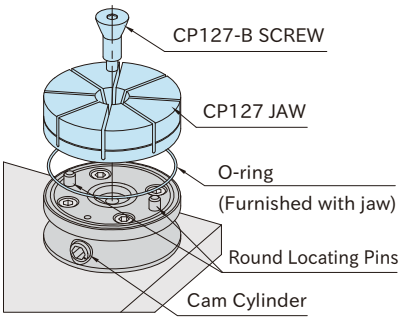


How To Use

1.Jaw Mounting

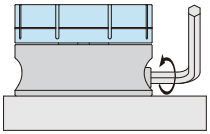
- Insert an O-ring to the groove on top surface of the Form Holding Clamp.
- Set a Jaw putting its locating holes onto the round locating pins and fix it with a tapered screw.

Note: At jaw installation, ensure the cam cylinder is fully loosened by turning counterclockwise until it stops.

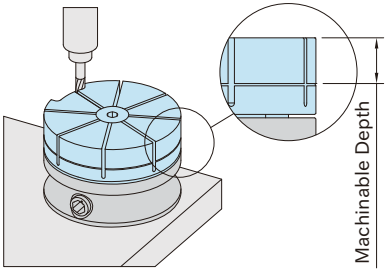


2.Jaw Machining

2-1. Loosen the cam cylinder fully and measure the dimension of the jaw for machining. Then tighten the cam cylinder until each jaw section expands 0.15mm.

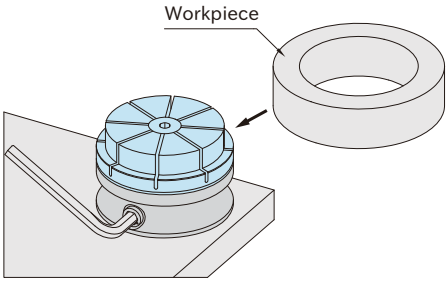


2-2. Machine the jaw to the contours of workpiece. (Do not machine the jaws beyond the machinable depth.)

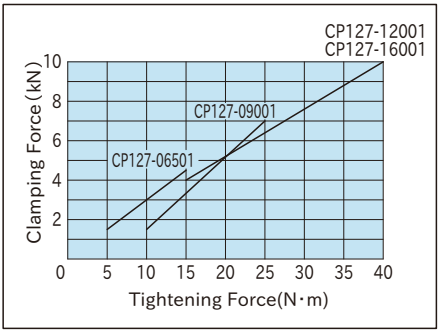


3. Workpiece Loading

After machining loosen the cam cylinder to set workpiece and tighten the cam cylinder again for clamping.



Performance Curve



Note

Do not tighten the cam cylinder without the workpiece set to prevent damage and deformation. Tightening with the torque beyond the allowable screw torque will lower the durability of the jaw.

Technical Information

- Part locating repeatability: ±0.03
- Jaw locating repeatability: ±0.02

Supplied With

- 1 of locking ring
- 1 of diamond pin
- 1 of socket-head cap screw

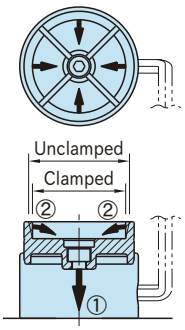
Note

- Do not tighten the clamp screw without the workpiece set to prevent damage and deformation.
- Do not machine the jaw beyond the machinable depth.

Related Product

- CP121 Jaws
- CP122 Mounting-on-lathe Adapters

Feature

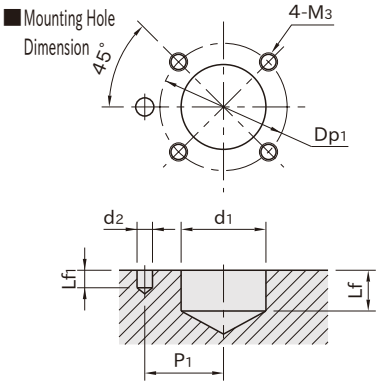


①When the locking screw is tightened, the central bottom part of the jaw is pulled down.

②At the same time the 4 jaw sections tilt toward the center to clamp the circumference of a part.

- The diaphragm claming mechanism allows securely clamping a part with 4 jaw sections.
- Different irregularly-shaped parts can be clamped.
- 0.15mm clamping stroke of each jaw section is perfect for clamping of lost-wax parts, die-cast parts, extruded parts, solid-drawn parts, prefinished parts, etc.

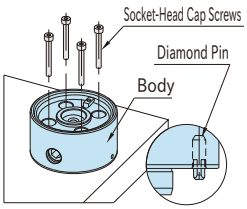
How To Install



Part Number	d_1 (H7)	Lf	d_2 (G7)	Lf_1	P_1 (±0.02)	M_3	Dp_1
CP120-06501	28	13	6	6	26	M6×1	42
CP120-09001	42	15	8	8	36	M8×1.25	60

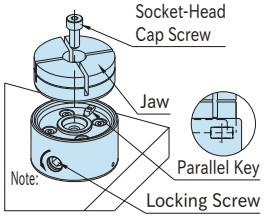
How To Use

1. Body Mounting



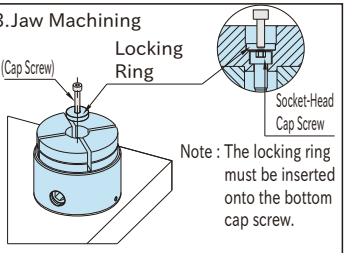
Insert an included diamond pin into the body for locating, and then secure the body to the fixture plate with 4 socket-head cap screws.

2. Jaw Setting



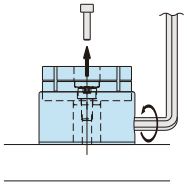
Engage the keyway on the bottom of the jaw with the parallel key on the top of the body, and then secure the jaw with an included cap screw.
Note : At jaw installation, ensure the locking screw is fully loosened by turning it counterclockwise until it stops.

3. Jaw Machining

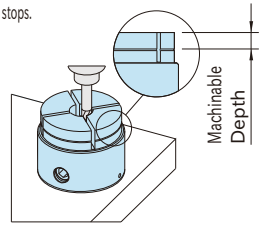


Note : The locking ring must be inserted onto the bottom cap screw.

(1)Set the locking ring in the jaw. (using a cap screw facilitates setting)

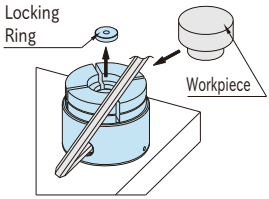


(2)Tighten the locking screw to clamp the locking ring. (Tighten with half of the allowable screw torque or more.) After clamping the screw, remove the screw from the locking ring.

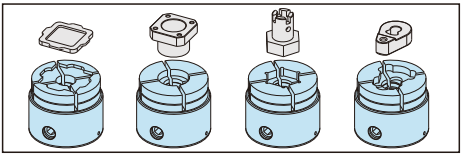


(3)Machine the jaw to the contours of workpiece.

4. Workpiece Loading



- Loosen the cap screw to remove the locking ring.
- Load the workpiece and tighten the clamping screw for clamping.



- Tightening the locking screw on the side of the body allows holding a part on its circumference.
- Machinable jaws allow clamping parts of various shapes.
- Ideal way to hold parts for machining on small-size machining centers, tapping centers, small-size 5-axis machines, CNC rotary tables, etc.

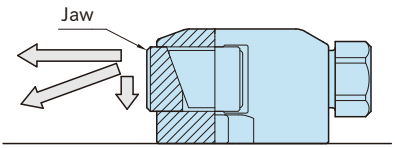
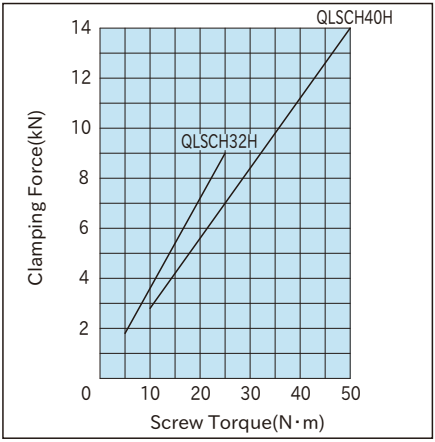
QLSCH40H	80	40	69	63	13	22	4	24	10	M5×0.8-8L	50	14	1240

Feature

- A screw type clamping mechanism provides long clamping stroke and firm clamping.
- Precision-ground jaw is perfect for clamping the workpiece on its finished surface.
- In clamping, the jaw provides downward force to prevent part lift.

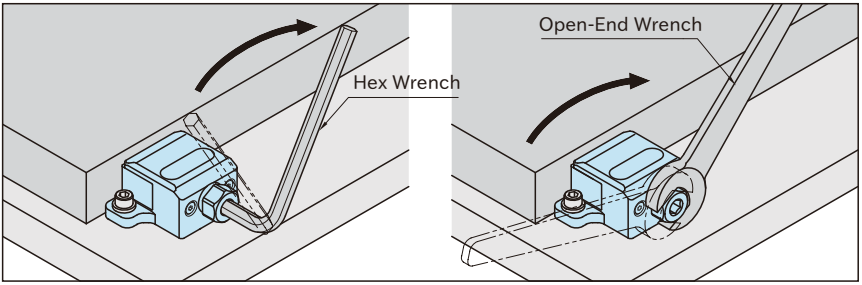


Performance Curve

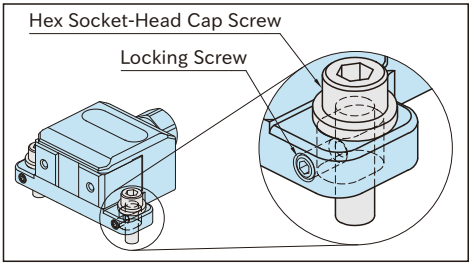


How To Use

- Can be clamped with both of hex wrench and open-end wrench.



- The locking screw must be screwed onto the hex socket-head cap screw to prevent the body sliding backwards when clamping.



QLSCH	CAM EDGE CLAMPS
	One-Touch type is available.

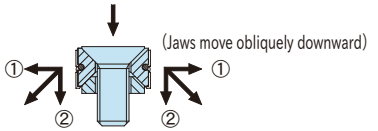
Feature

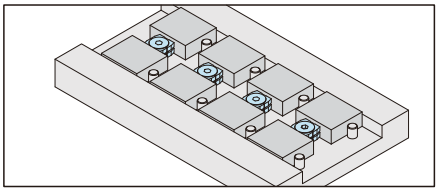
- The wedge construction allows powerfully clamping the workpiece.
- Can hold two workpieces with equilateral clamping action by using a hex wrench.



①Horizontal pressure against workpiece
②Vertical pressure preventing workpiece lift

How To Use

Compact design allows to utilize machining area and clamp multiple workpieces.



QLSWC SWING CLAMPS FOR TORQUE CONTROL

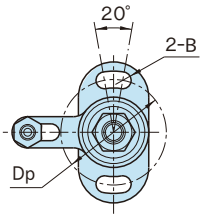
RoHS

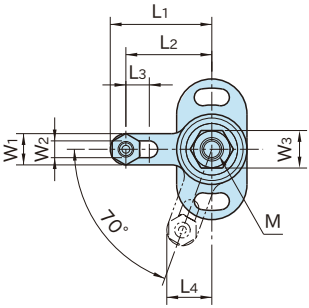
IMAO

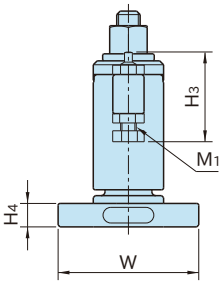
Base/Washer/Flange Nut/Clamping Spindle	Body
S45C steel Quenched and tempered Black oxide finish	SCM440 steel Quenched and tempered Black oxide finish

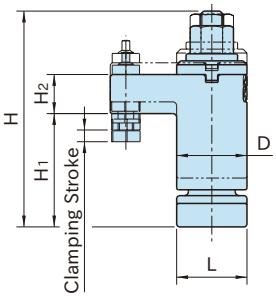
Feature

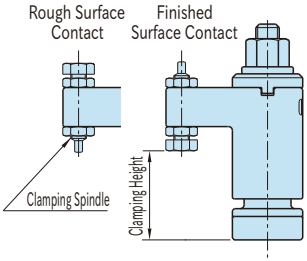
- Designed for clamping-force control with a torque wrench.
- Screw-locking mechanism allows for longer clamping stroke and greater clamping force than a cam-locking mechanism.











CLAMPS

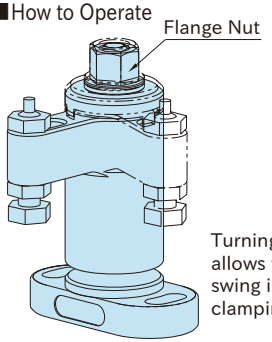
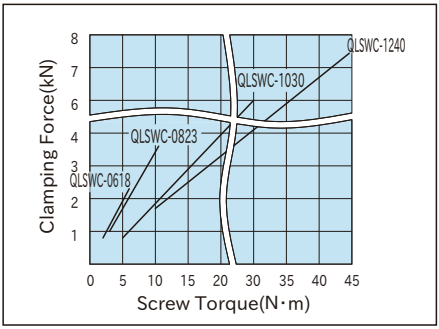
How To Use

■How to Operate



Turning the flange nut allows the clamp arm to swing into position for clamping.

Performance Curve



Note

Do not use a power tool (impact wrench etc.) to turn the flange nut, for damage prevention.

QLSWC SWING CLAMPS WITH ADJUSTABLE HANDLE

One-Touch type is available.

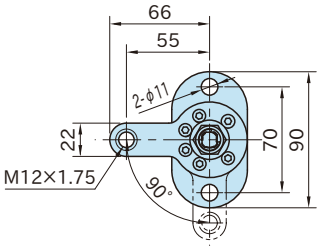
PTSW1 SWING CLAMPS (Quick-Acting)

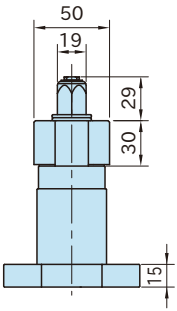
RoHS

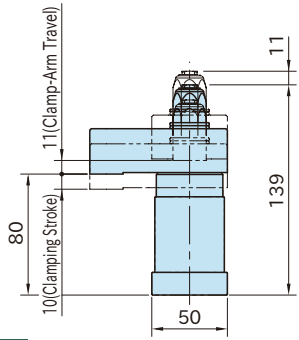
IMAO

Without Clamp Arm

Body / Clamp-Arm Holder / Hex. Head	Clamp Arm
SCM440 steel Quenched and tempered Black oxide finish	S45C steel Quenched and tempered Black oxide finish

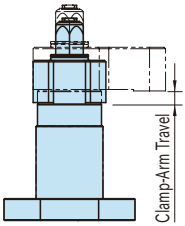






Feature

・The clamp arm swings in swift response to the turning speed of an impact wrench, for quick clamping.
・A short clamp-arm travel allows quick clamping.



Note:For robotized production lines, use Spiral-Acting Swing Clamps.

■With Clamp Arm

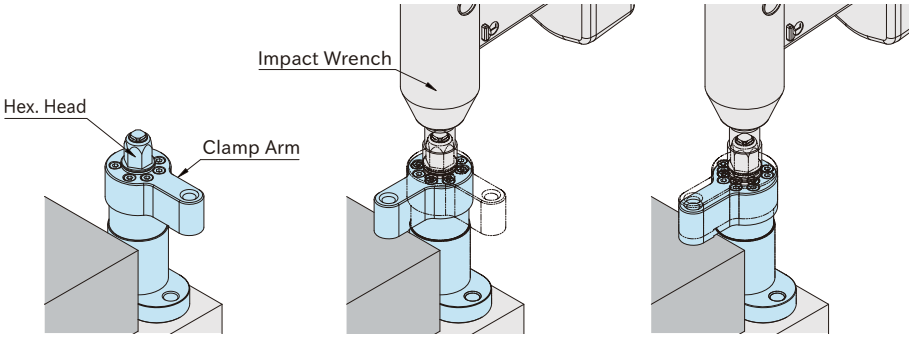
Part Number	Clamping Force(kN)	Allowable Screw Torque (N・m)	Clamping Direction	Weight (kg)
PTSW1-12R	6	28	CW	1.6

■Without Clamp Arm

Part Number	Clamping Force(kN)	Allowable Screw Torque (N・m)	Clamping Direction	Weight (kg)
PTSW1-12NR	6	28	CW	1.2

Note: If you prepare a custom clamp arm, contact us for the dimensional information on its mounting section.
Note that custom clamp arms made by yourselves may cause clamping force to be increased or decreased.

How To Use



1. Unclamped Mode
Load a workpiece.

2. Ready-To-Clamp Mode
When the hex. head is turned by an impact wrench, the clamp arm swings fast to the clamping position.

3. Clamping Mode
The clamp arm moves down for clamping. Using an impact wrench allows completing positive clamping in a few seconds.

Note

・Do not use applying higher torque than allowable for a long period of time, to avoid damage. Using a torque-settable impact wrench is recommended.
・Use PTSW2 in robotized production lines.

PTSW2 SWING CLAMPS (Spiral-Acting)

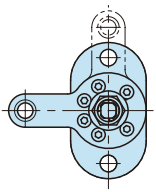
RoHS

IMAO

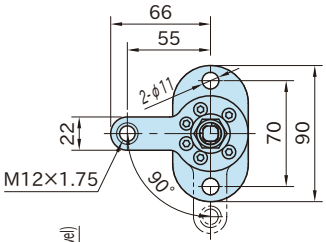
Without Clamp Arm

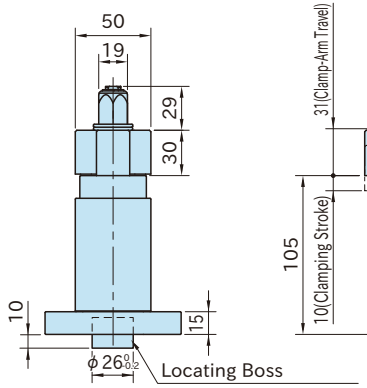
Body / Clamp-Arm Holder / Hex. Head	Clamp Arm
SCM440 steel Quenched and tempered Black oxide finish	S45C steel Quenched and tempered Black oxide finish

Counterclockwise Clamping



Clockwise Clamping

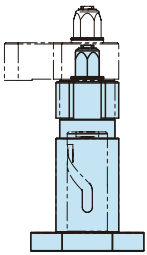




Note: Use when locating clamps is required in the robotized production line.

Feature

The inside spiral groove allows the clamp arm to swing positively.



■With Clamp Arm

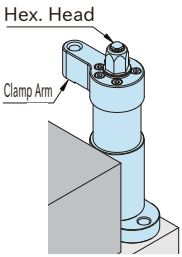
Part Number	Clamping Force (kN)	Allowable Screw Torque (N·m)	Clamping Direction	Weight (kg)
PTSW2-12R	6	28	CW	2
PTSW2-12L			CCW	

■Without Clamp Arm

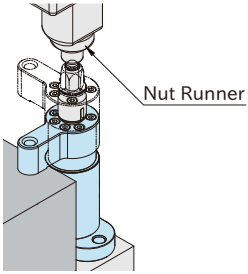
Part Number	Clamping Force (kN)	Allowable Screw Torque (N·m)	Clamping Direction	Weight (kg)
PTSW2-12NR	6	28	CW	1.6
PTSW2-12NL			CCW	

Note: If you prepare a custom clamp arm, contact us for the dimensional information on its mounting section. Note that custom clamp arms made by yourselves may cause clamping force to be increased or decreased.

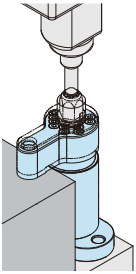
How To Use



1. Unclamped Mode
Load or unload a workpiece.



2. Ready-To-Clamp Mode
When the hex. head is turned by a nut runner, the clamp arm swings fast to the clamping position.



3. Clamping Mode
The clamp arm moves down for clamping. Using a nut runner allows completing positive clamping in a few seconds.

Note

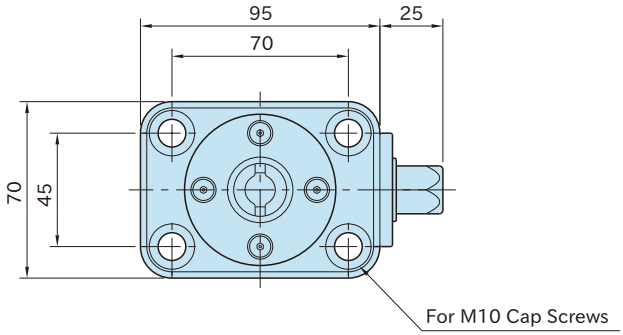
A torque-settable impact wrench may also be used to operate these clamps.

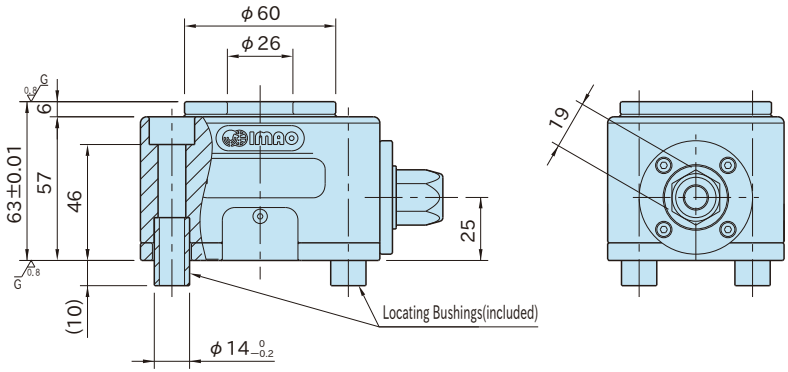
PTPD BLOCK PULL CLAMPS

RoHS

IMAO

Body	Contact Pad	Locating Bushing
S45C steel Black oxide finish	SCM440 steel Quenched and tempered Black oxide finish	SCM435 steel Quenched and tempered Black oxide finish





Part Number	Weight (kg)

Options of Operating Tool	Clamping Force (kN)	Allowable Screw Torque(N·m)
Spanner or Socket Wrench	12	40
Nut Runner (for robotization)		
Impact Wrench	6	20

Note

Do not use applying a greater torque than allowable for a long period of time, to avoid damage. When an impact wrench is used, the torque-settable type is recommended.

Related Product

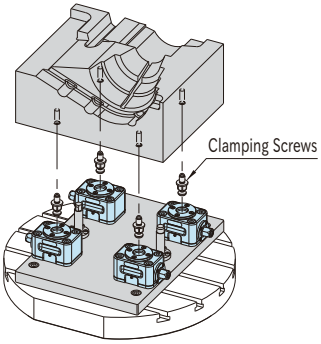
PTPD-M Clamping Screws

Feature

Clamp the workpiece from bottom.

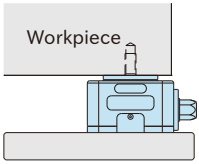
■Ideal for 5-Axis Machining

Block Pull Clamps mount under a workpiece making its surfaces to be machined fully open for the cutting tool. This allows completing multiple machining processes at a time.

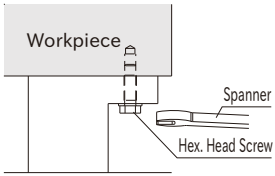


■Better Workability

Block Pull Clamps allow fastening a workpiece easily, unlike the conventional method of fastening with hexagon head screws from below.

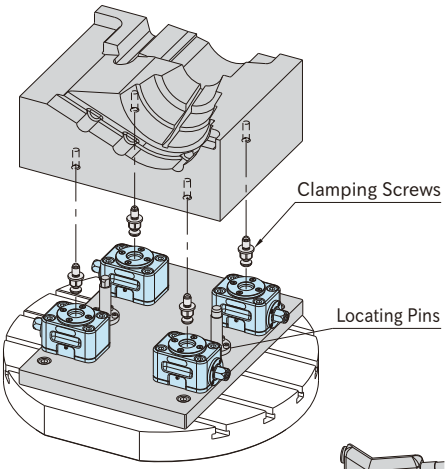


<Conventional Method>

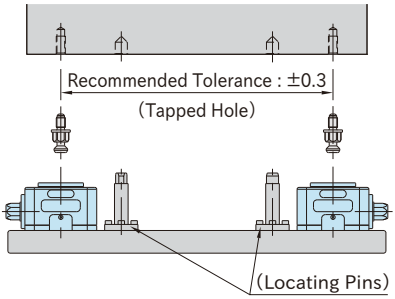


How To Use

In addition to tightening with wrench, this clamp can be operated with nut runner for automation and impact wrench for lower workload.

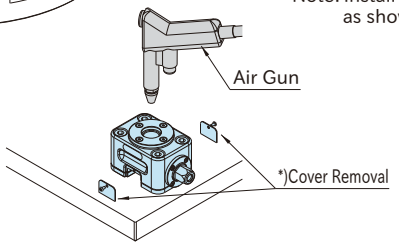


■Spacing Between Two Clamping-Screw Holes



Locating repeatability in using Block Pull Clamps alone is ±0.3.

Note: Install locating pins for better accuracy, as shown above.



*) To remove metal chips in the mechanism, take off the side covers and blow air from above.

Feature

- Compact design for applications in limited space
- BJ530 Hook-Clamp Holders are available.
- Clamp that is designed to move up and down in conjunction with the tightening screw, for prevention of galling.

How To Use

Instead of being used with Hook-Clamp Holders, these Hook Clamps can be plugged into a custom block with receiving holes as specified on the right.

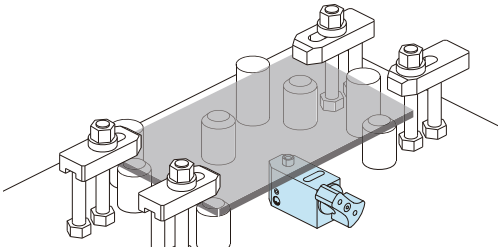
IMAO's Work Supports

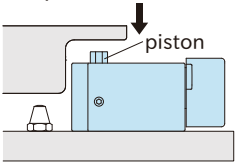
Solutions for workpiece chattering !!

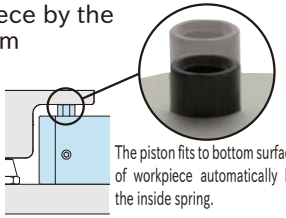
during machining low-profile part



Easy Setup

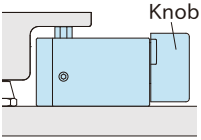
① Support a workpiece by the piston from bottom





The piston fits to bottom surface of workpiece automatically by the inside spring.

② Lock the piston by turning the knob *)



*) The piston locking element differs by work support's type, such as screws or handles. We also provide air operated types.

PRECISION WORK SUPPORT

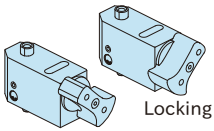
For machining highly accurate workpiece

PRECISION WORK SUPPORT

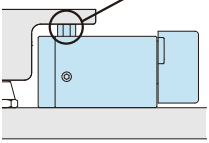
Ideal for

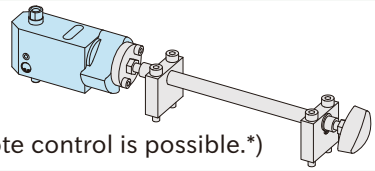
Preventing chattering during light cutting of workpiece.

One-touch operation & Stable support capacity



The displacement of the piston does not exceed 3 μ m when locked





Remote control is possible.*)

*) Components for remote control are not available from us.

AMNS06-S	6	10	10	3	0.4~0.7	20~40	0.2~0.3	22
AMNS08-S	7.5	13	13	5		40~70	0.3~0.4	49

Feature

・The piston can be locked/unlocked by air operation.
・This compact work support can be used as a support in surface mounter.

How To Use

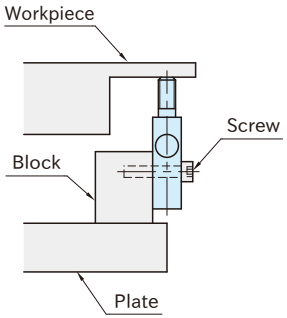
■Operating Instructions

1. Load a workpiece on the support.
2. The piston strokes to fit the workpiece by the inner spring.
3. Clamp the workpiece.
4. Apply air to the pneumatic port.
5. The piston is locked.
6. The piston is unlocked when the air is released.

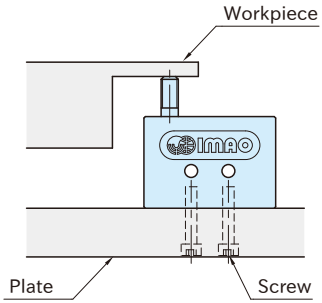
■Installation Instructions

Side or bottom surface mounting is possible.

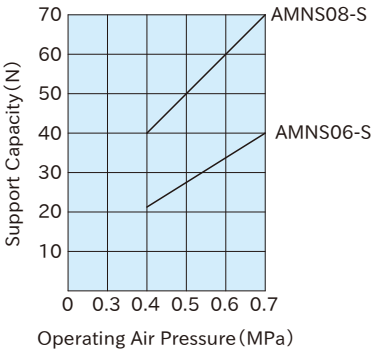
Side Surface Mounting



Bottom Surface Mounting

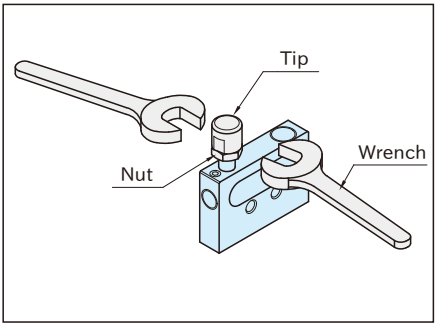


Performance Curve



Note

・Use a nut to attach a tip on the piston as directed below.
The piston rotates 360° freely.



・In machining applications, use clean coolant without sludge to prevent trouble.

BJ370-06001	13	5	15		500~700	1~2.2	165

Feature

The piston can be locked/unlocked by air operation.

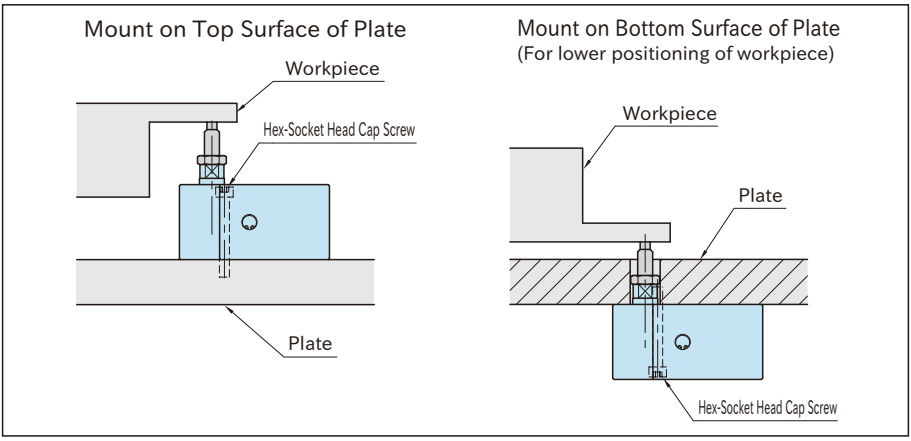
How To Use

■Operating Instructions

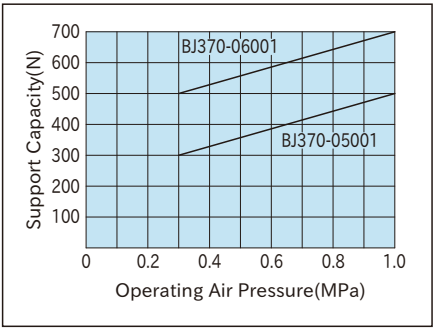
1. Load a workpiece on the support.
2. The piston strokes to fit the workpiece by the inner spring.
3. Clamp the workpiece.
4. Apply air to the pneumatic port.
5. The piston is locked.
6. The piston is unlocked when the air pressure is released.

■Installation Instructions

Can be mounted on both top surface and bottom surface of plate with hex-socket head cap screws.

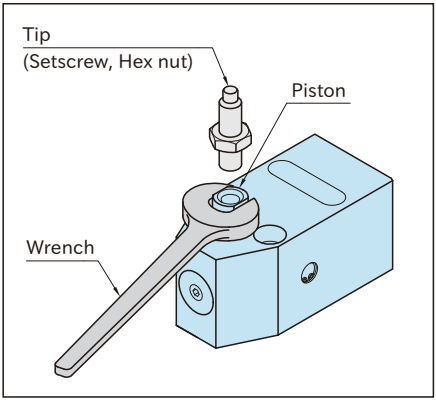


Performance Curve



Note

・When installing a tip on the piston, lock the piston using a wrench to prevent it from receiving any torque.



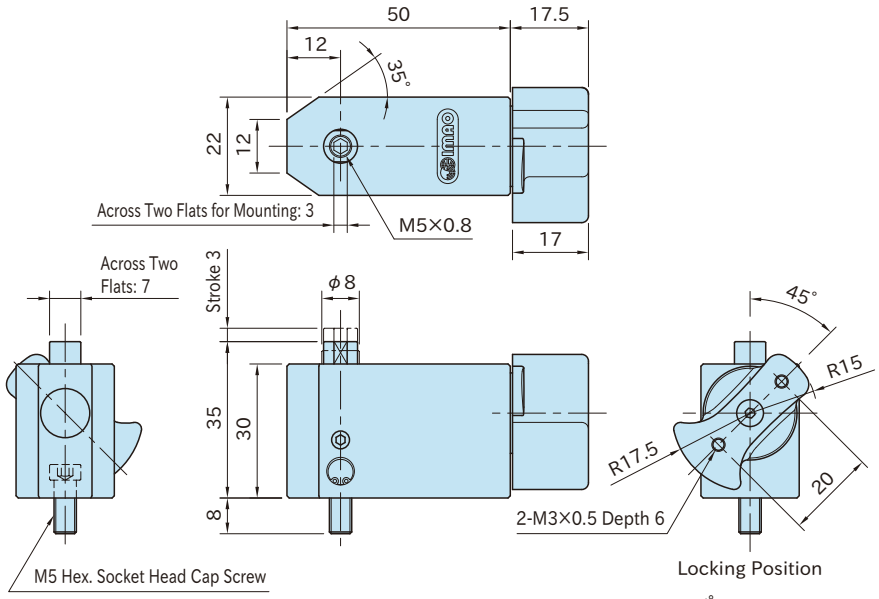
・In machining applications, use clean coolant without sludge to prevent trouble.

BJ371 PRECISION WORK SUPPORT

RoHS

IMAO

Body	Piston	Locking Shaft	Knob
A5052 aluminum Anodized	SK95 steel Quenched & tempered Black oxide finished	S45C steel Electroless nickel plated	SUS303 stainless steel



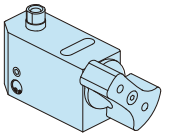
Part Number	Support Capacity (N)	Piston Spring Force (N)	Weight (g)
BJ371-05001	400	0.3~0.4	160

Feature

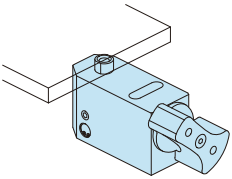
- The piston can be locked/unlocked with one-touch operation and keeps stable support capacity.
- The displacement of the piston is not exceeding 3 μm when it is locked. This helps keep the accuracy of the workpiece height.
- Can be used by remote control.

How To Use

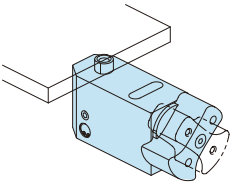
■Operating Instruction



1. No workpiece loaded.



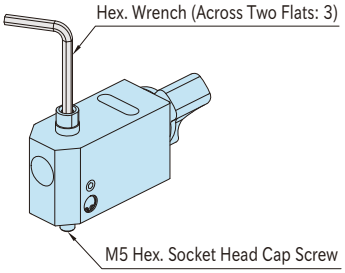
2. Load a workpiece, and the piston lowers.



3. Lock the piston by turning the knob.

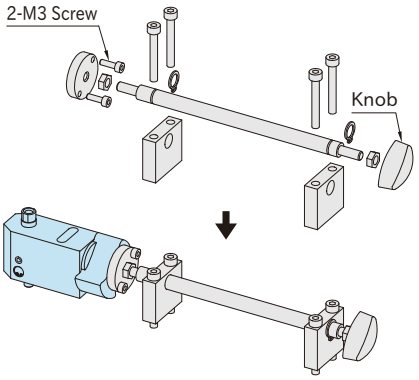
■Installation Instruction

Tighten the M5 hex. socket head cap screw with a hex. wrench (Across Two Flats: 3).



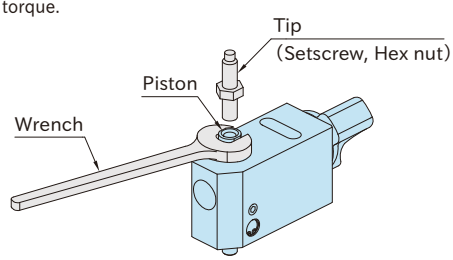
■Application Example for Remote Control

Components for remote control are not available from us.



Note

- When installing a tip on the piston, lock the piston using a wrench to prevent it from receiving any torque.



- In machining applications, use clean coolant without sludge to prevent trouble.

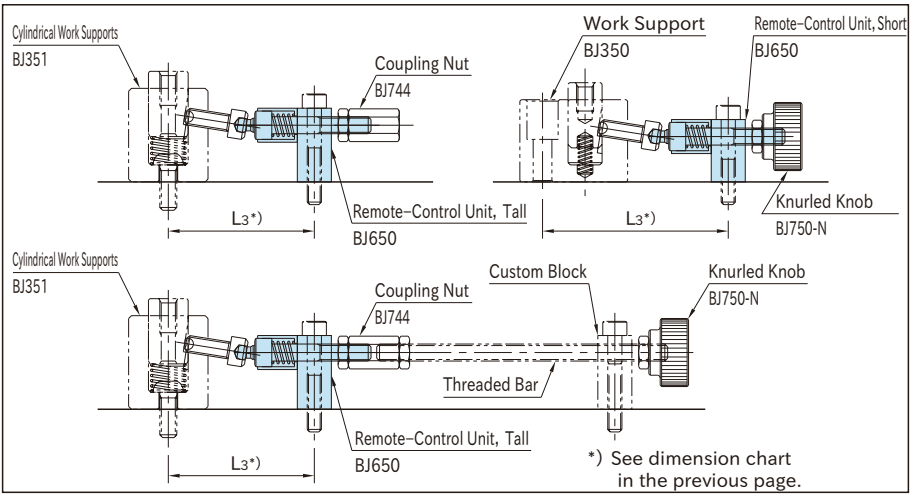
BJ650-16002			95	335	BJ351-16001

How To Use



Suitable for controling work supports from a distance.

Note

When used with a BJ650 Remote-Control Unit, a BJ350 or BJ351 Work Support can provide the support capacity as given in the catalog if the screw torque is fully applied by using a tool like wrench. If the screw torque is fully applied by hand(using a knob), the support capacity will be reduced to approx. 20% of the catalog value.

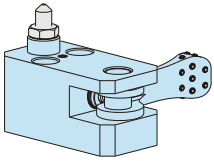
BJ352-10001	56	14.5	15	QLCA-08	200	1.2	1～11		1110

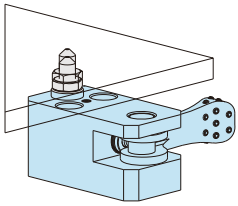
*)Allowable load to operate the handle

How To Use

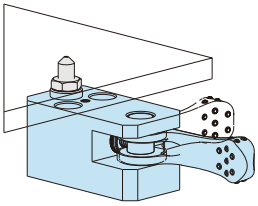
■Operating Instruction



1. Unlocked
No workpiece loaded

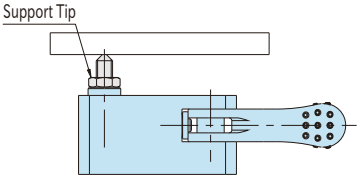


2. Workpiece Loading
Load a workpiece, and the piston lowers.



3. Locking
Turn the handle to lock the piston.

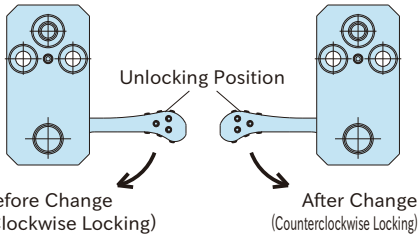
■Adjusting Handle Locking Position



When the projection amount from the body is ½ of the stroke S, the handle comes to the recommended locking position. Design your application as the support tip contacts the workpiece at this position.

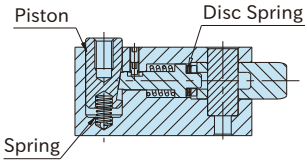
■Changing Locking Direction

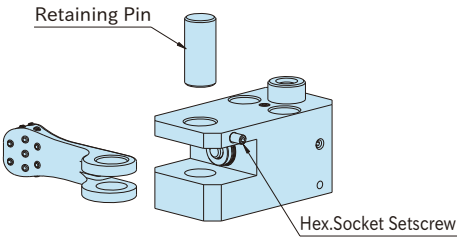
Loosen the hex. socket setscrew to remove the retaining pin.
Turn the handle upside down and put it in position again.



Feature

The built-in disc spring prevents loosened locking.





Note

When you attach a support tip to the tapped hole through the shaft, tighten the shaft and fix it to prevent damage.

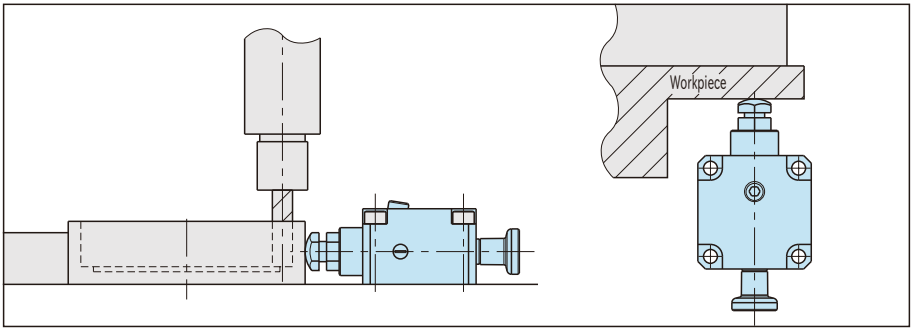
BJ351-12001A	M12X1.75-20L Across 2 Flats 6	8	21	19	22	5	1~11	1160

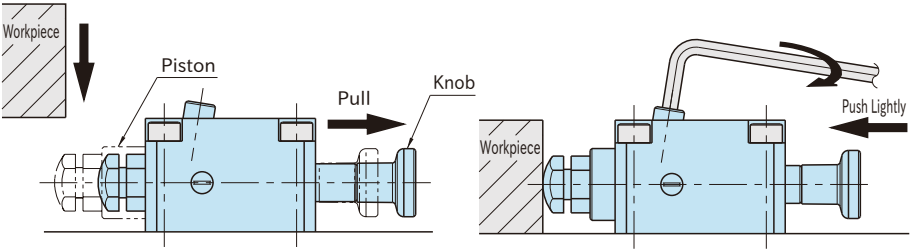
How To Use



Ideal for preventing the thin workpiece from chattering and deflecting.

■Operating Instruction

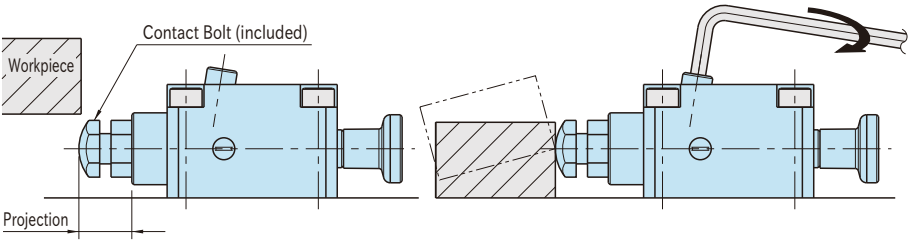
1. To set a workpiece with the piston retracted,



1. Set the piston retracted by pulling the knob. The internal plunger allows retaining the piston at the retracted position.

2. Load the workpiece and then push the knob lightly to let the adjustable spindle contact the workpiece. Tighten the ball thumb screw to lock the piston.

2. To set a workpiece without retracting the piston,



1. Adjust the projection of the adjustable spindle to let the bottom edge of workpiece contact the radius of the adjustable spindle when loading the workpiece.

2. Snap in the workpiece, and then tighten the ball thumb screw to lock the piston.

Note

When you attach a support tip to the tapped hole through the shaft, tighten the shaft and fix it to prevent damage.

FLEX LOCATORS

FLEX LOCATORS

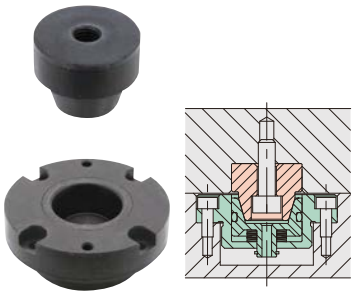
Flex Locators provide "precise locating" and "easy operation" by movable tapered pin or bushing.

Hexagon Head | Cam Handle | Knob | Pneumatic

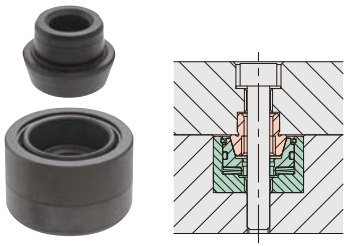
FLEX LOCATORS

Simple and low cost types with only locating function



Standard

Locating Repeatability	10μm



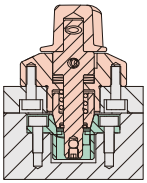
Through Hole

Locating Repeatability	10μm

ONE-TOUCH FLEX LOCATORS

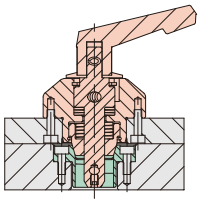
Locating and clamping functions

Quick and easy operation by knob



Knob

Locating Repeatability	10μm
Clamping Force	350N, 600N

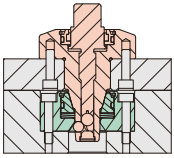


Handle

Locating Repeatability	10μm
Clamping Force	600N, 700N

(Adjustable-torque wrenches are available to control clamping force.)

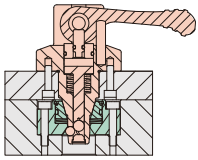
High clamping force by hex head



Hexagon Head

Locating Repeatability	8μm
Clamping Force	1700N, 3000N, 4500N

Quick operation by handle



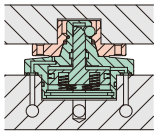
Cam Handle

Locating Repeatability	8μm
Clamping Force	600N, 1200N, 1800N

PNEUMATIC FLEX LOCATORS

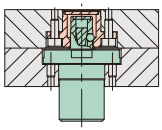
Easier and faster pneumatic operation

High clamping force by spring and air



Flange diameter
ϕ70 / ϕ85

Locating Repeatability	3μm
Clamping Force	4kN, 6.3kN



Flange diameter
ϕ40 / ϕ51

Locating Repeatability	±10μm
Clamping Force	250N, 350N

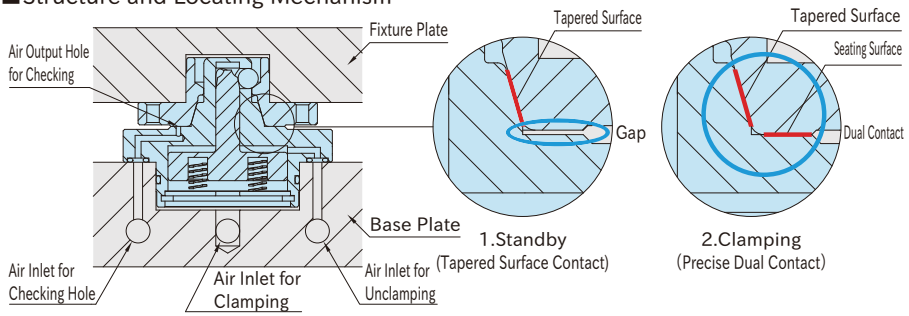
Feature

■Structure and Locating Mechanism



・When the air pressure is lowered by an air leakage, the wedge mechanism and the spring prevent prompt lowering of the clamping force.
Clamping Force at 0 Mpa Air Pressure (Clamping Force of Spring)
・AMWF40Type…1.2kN
・AMWF50Type…1.8kN

・Can check if the fixture plate is clamped properly by applying air through the checking hole.

・Precise dual contact provides excellent locating repeatability at 3μm.

AMWF-L-S PNEUMATIC FLEX LOCATOR PINS

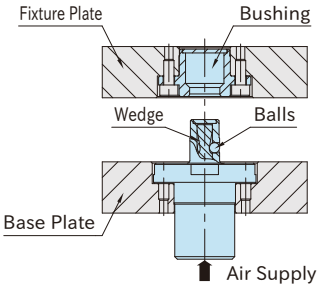
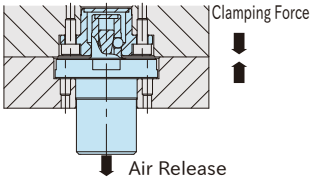
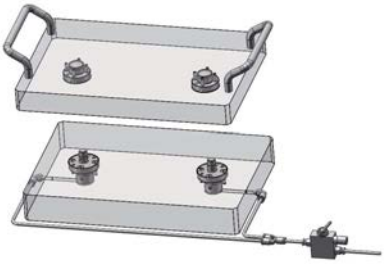
Feature



Supply air for unclamping.
The wedge goes up and releases the balls.



Release air for clamping. The wedge goes down and pushes the balls to pull down the bushing.
Can keep clamped without air supply.



Quick clamping and unclamping reduce set-up time in production equipment.

Locating Repeatability : ±10μm
The bushing is centered and clamped when the 3 balls are pushed out to gain high locating repeatability.

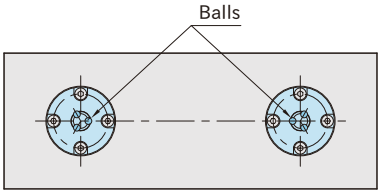
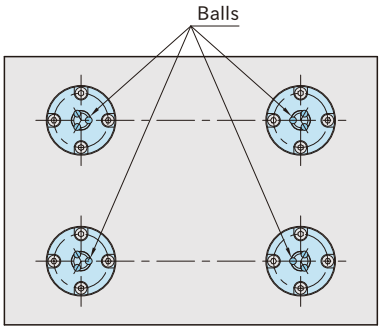
How To Use PNEUMATIC FLEX LOCATORS

■How to Use

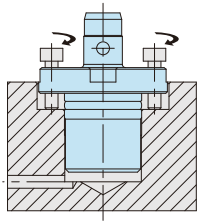




The pins should be mounted in the direction shown in the above figures.

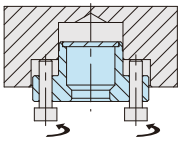
■How to Remove (Direct Style Pins)

For easier removal, insert screws into the tapped holes and screw them.



■How to Remove (Bushings)

For easier removal, insert screws into the tapped holes and screw them.



Note

Size	Max. Loading Weight (kg)
AMWF18	40
AMWF26	56

- If the total weight exceeds the maximum loading weight, the locating repeatability may exceed ±10 μm.
- In vertical use, the locating repeatability may exceed ±10 μm.
- Pins and Bushings should be positioned equally against the center of the fixture plate.
- For Port Style Pins, use with air joint that is available commercially.

Note: The maximum loading weight is the entire sum of the weight of fixture plates, fixtures and workpieces.

Note: The maximum loading weight shown is the value when two sets each of AMWF-L-S Pins and AMWF-BU Bushings are used.

How To Use ONE-TOUCH FLEX LOCATORS (Handle / Knob)

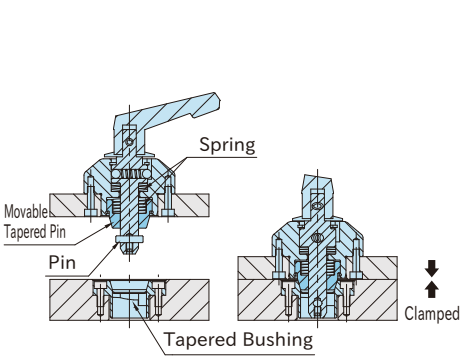
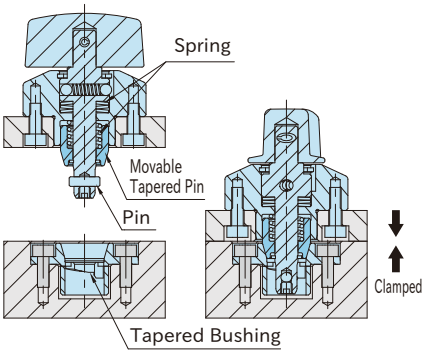
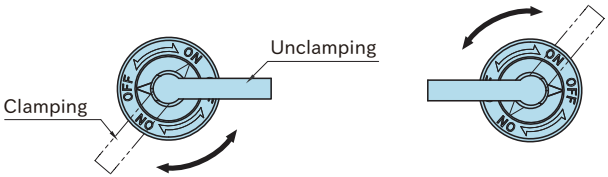
Feature



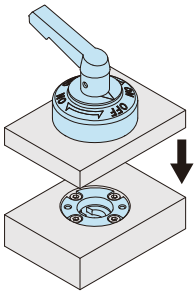


・The plates are located by fitting of the tapered pin and the tapered bushing.
・The pin contacts the cam surface inside the bushing, and it compresses the inner spring, then the plates are clamped.
Note: CP722-0840R-06N does not have locating function.

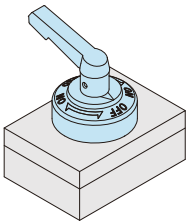
Two pair of clamping and unclamping positions of handle can be chosen for CP722.



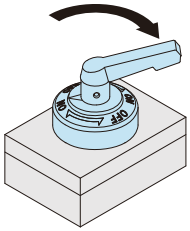
How To Operate



1. Ensure the handle is positioned at "OFF" mark.



2. Insert the clamper to the bushing.

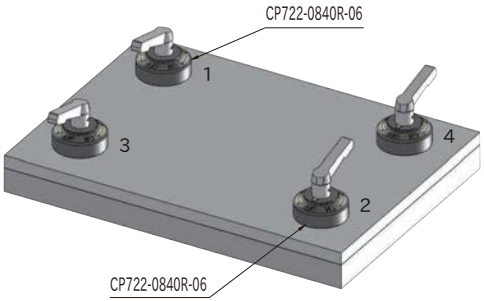


3. Turn the handle to "ON" mark for clamping.

*) Follow back these steps for unclamping.
*) Same operation for Knob style.

Tightening Order

1.Ensure the handle is positioned at "OFF" mark and lift down the fixture plate.
2.Turn the handle and clamp in order of 1→2→3→4.
*) For unclamping, ensure the handle is positioned at "OFF" mark and disassemble the fixture plate.

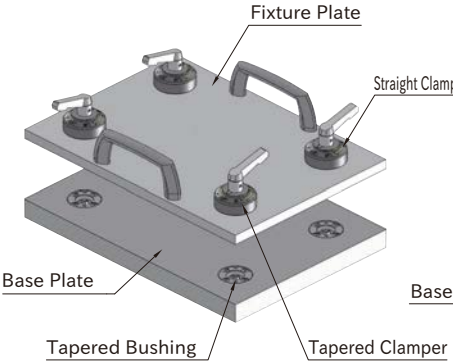


If the handles are not tightened in the correct order, the locating repeatability may exceed 10 μm.

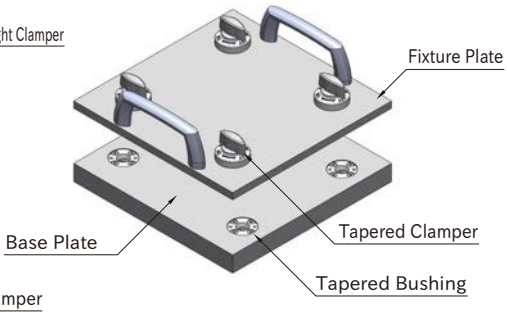
How To Use

■Horizontal Assembly of Fixture Plate

Note: Ensure not to lift the fixture plate up and down with gripping the handle of the clampers.



CP722



CP723

■Vertical Assembly of Fixture Plate

Locating repeatability is 20 μm.

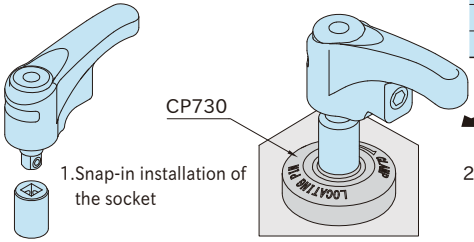
CP-TCW 8-S	13	17.8		314
CP-TCW10-S	17	23.8	30	529

How To Use

Can be used as a tightening tool for CP730 ONE-TOUCH FLEX LOCATOR CLAMPERS (Hexagon Head).

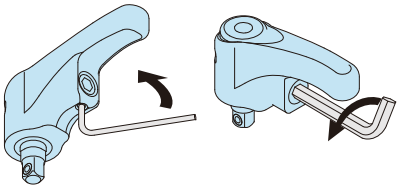


2.Turn the handle to clamp.
The handle clicks to indicate completed tightening at desired torque.

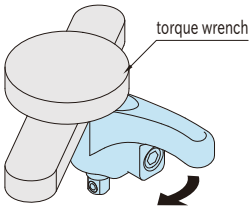
Part Number	Proper ONE-TOUCH FLEX LOCATOR CLAMPERS	
CP-TCW 6-S	CP730-0939LH	CP730-0939SH
CP-TCW 8-S	CP730-1246LH	CP730-1246SH
CP-TCW 10-S	CP730-1656LH	CP730-1656SH

How To Set Torque

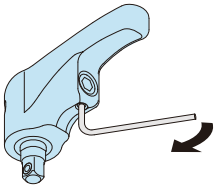
The preset torque is roughly set to its maximum tightening torque.



1. Loosen the locking screw.
2. Turn the hex key CCW to fine adjust the torque-adjusting screw.



3. Measure the torque with a torque wrench.
- Connect a torque wrench on the Adjustable-Torque Wrench.
- Turn the handle in the tightening direction and fine adjust the depth of torque-adjusting screw to reach to the handle clicking position at desired torque.



4. Fasten the locking screw at the desired torque.

Reference

See ATCL ADJUSTABLE-TORQUE HANDLES page for further information.

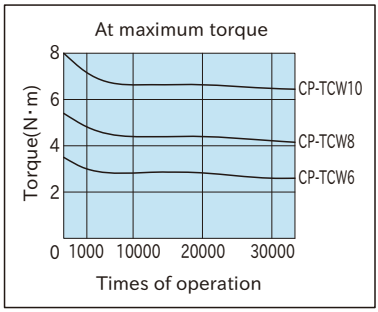
Related Product

CP730 ONE-TOUCH FLEX LOCATOR CLAMPERS (Hexagon Head)

Technical Information

- For initial several thousand operations, the tightening torque will decrease. (See the graph below) Measure the torque regularly, and fine adjust the depth of torque-adjusting screw as needed.
- The tightening torque can vary. (Max.±15%) Not recommended for precise torque management.

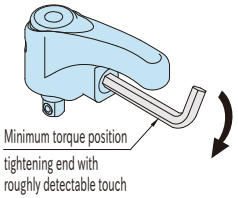
Torque Performance Graph



Note

- Do not overtighten or overloosen the torque-adjusting screw.

■Reference Torque Adjusting Range

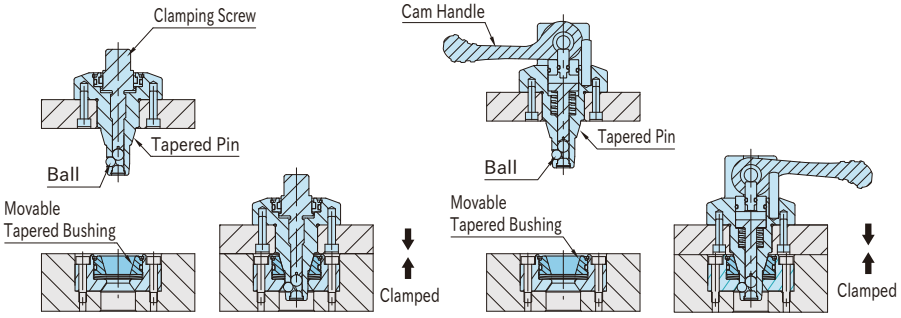


Size		Rotation
CP-TCW	6	3/4
CP-TCW-S	8	1
	10	3/4

- To reach approx. the min torque, loosen the torque adjusting screw to the same end surface level of the body, then tighten it until you feel light touch of stop. (Ensure that the torque adjusting screw does not protrude from the body when loosening it.)
- To reach approx. the max torque, rotate the torque adjusting screw depending on the above table from the approx. min torque as instructed previously.

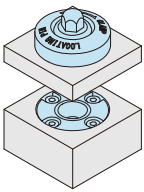
How To Use ONE-TOUCH FLEX LOCATORS (Hexagon Head / Cam Handle)

Feature

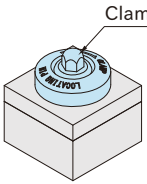


・The plate is located by fitting of the tapered parts.
・When the clamping screw or the cam handle is tightened, the balls goes out and the movable tapered bushing goes down. The fixture plate contacts with the base plate.
・For clamping screw, 2 turns tightening is enough.
Note: No locating function on the combination of straight pin and straight bushing.

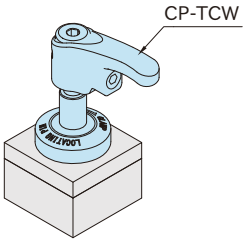
How To Operate



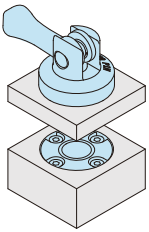
1. Ensure the balls are retracted.



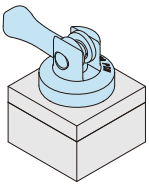
2. Insert the clamper to the bushing.



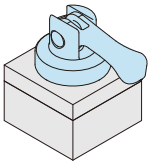
3. Tighten the clamping screw within the allowable torque.
Note: For unclamping, follow back these steps.



1. Ensure that the cam handle is loosened.

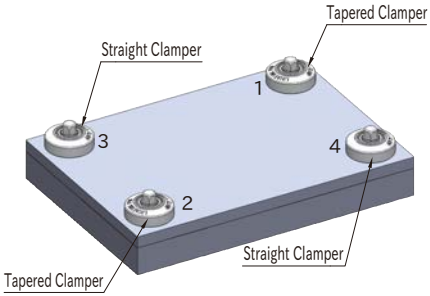


2. Insert the clamper to the bushing.



3. Tighten the cam handle.
Note: For unclamping, follow back these steps.

Tightening Order



CP730

1.Ensure that each plate is in close contact. *)
2.Tighten the screws temporarily in order of 1→2→3→4. For temporary tightening, the tightening torque should be approximately 50% of the final tightening.
3.Tighten the screws finally in order of 1→2→3→4.
*) The fixture plate may be pushed up by the lifting force of the tapered bushing. In such cases, tighten the screws loosely in order of 1→2→3→4, and make the each plate be in close contact with each other. Then tighten the screws temporarily. For the lifting force, see the measurement table of CP735 ONE-TOUCH FLEX LOCATOR BUSHINGS.

CP731

・Tighten the cam handles in order of 1→2→3→4.

If the screws are not tightened in the correct order, the locating repeatability may exceed 8 μm.

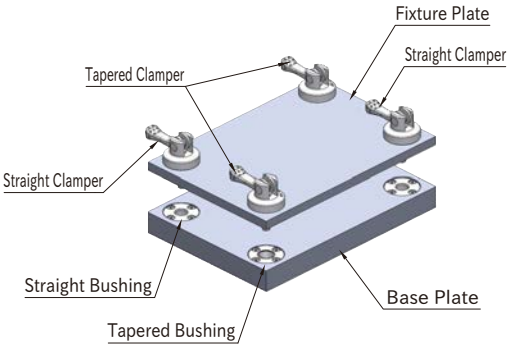
How To Use

■Horizontal Assembly

Two sets of tapered pin and straight pin

Use tapered or straight pin and bush as a set.

Note:Ensure not to lift the fixture plate up and down with gripping the cam handle of the clampers.

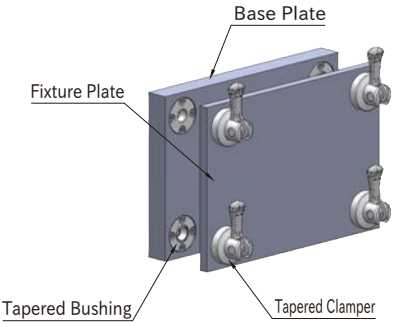


■Vertical Assembly

In vertical assembly, the locating repeatability is 10 μm.

Size		Max. Loading Weight(kg)
CP730 / CP735	0939	40
	1246	60
	1656	100

Size		Max. Loading Weight(kg)
CP731 / CP735	0939	25
	1246	40
	1656	60



Note: The maximum loading weight is the entire sum of the weight of fixture plates, fixtures and workpieces.
Note: The maximum loading weight shown is the value when two sets of tapered clamper and tapered bushing are used.

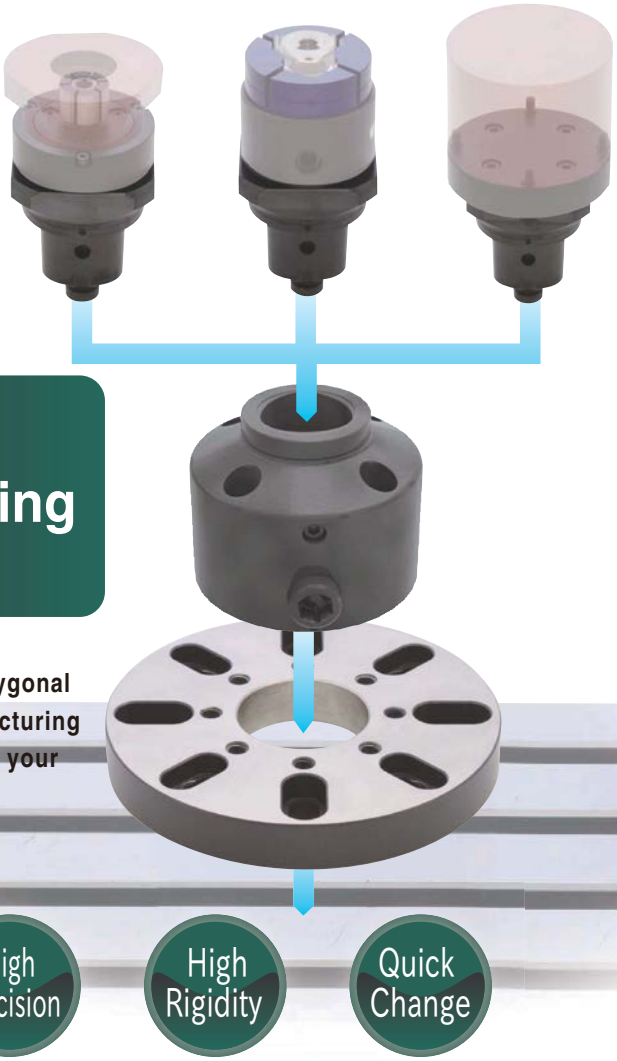
Quick Zero Setting Device



Quick Zero Setting Device

Ideal dual-contact coupling with a polygonal taper saves manufacturing costs and improves your productivity.

High Precision

High Rigidity

Quick Change

Usabilities

- Precise fixture changes for wide-variety low-volume productions
- Precise machinings that require intermediate measurements

Usable on

- 5-axis machine
- Vertical M/C
- CNC Rotary table

High Rigidity

Ideal dual-contact of a polygonal taper provides high bending rigidity and high torsional rigidity.

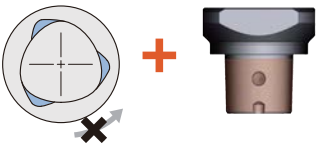
Compared to HSK shank(HSK-A63)
Bending/torsional rigidity is
more than double!

Bending rigidity

Dual-contact

Torsional rigidity

Polygon + Short taper



High Precision

Provides accurate positioning with high repeatability and no need of centering.

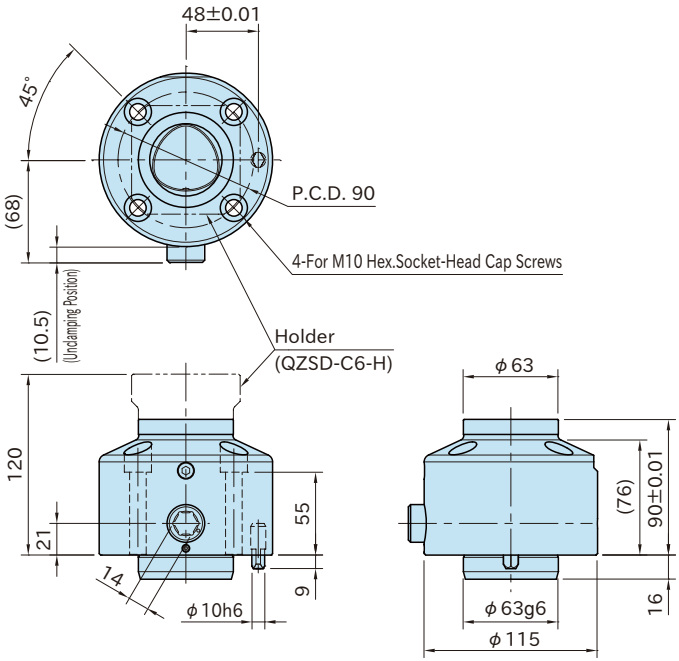
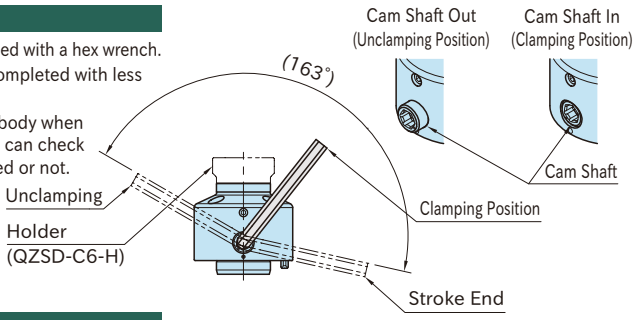
Body	Cam Shaft
SCM420 steel Carburized-hardened Black oxide finished	SCM435 steel Quenched and tempered Black oxide finished



Part Number	Clamping Force(kN)	Allowable Tightening Torque(N·m)	Weight (kg)
QZSD-C6-B	30	100	5.2

Feature

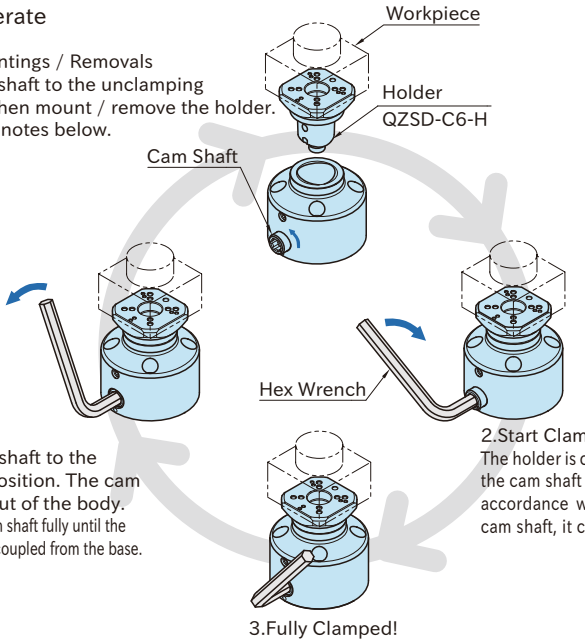
- Holder can be clamped / unclamped with a hex wrench.
- Tightening / loosening can be completed with less than 180˚turn.
- The cam shaft comes out of the body when the holder is unclamped. So you can check visually if the holder is unclamped or not.



How To Use

■How to Operate

1.Holder Mountings / Removals
Turn the cam shaft to the unclamping position and then mount / remove the holder.
Note: See the notes below.



2.Start Clamping
The holder is clamped by tightening the cam shaft with a hex wrench. In accordance with tightening of the cam shaft, it comes in the body.

3.Fully Clamped!

4.Unclamping
Turn the cam shaft to the unclamping position. The cam shaft comes out of the body.
Note: Turn the cam shaft fully until the holder is uncoupled from the base.

<Notes for Mountings/ Removals of Holder>

- Ensure that the cam shaft is come out of the body.
- Note to mount the holder by aligning its hole and dent to the cam shaft of the base.

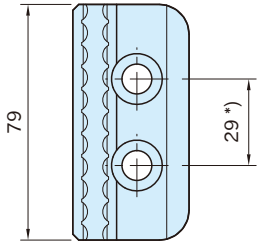
CP175 JAWS

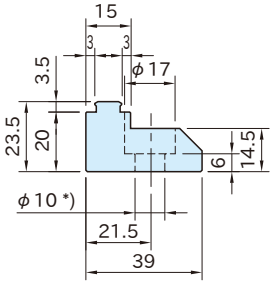
CP175-08001RS (Serrated)

CP175-08001D (Dovetail)

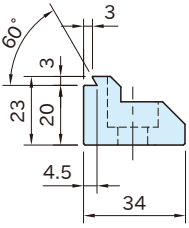
Part Number	Type	Weight (g)
CP175-08001RS	Serrated	710
CP175-08001D	Dovetail	600



Body
SCM440 steel Quenched & tempered Black oxide finished



CP175-08001RS
(Serrated)(2 pcs. as a set)



CP175-08001D
(Dovetail)(2 pcs. as a set)

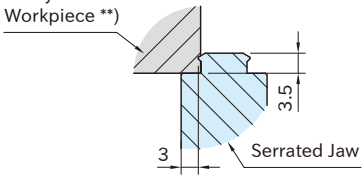
How To Use

Use as jaws of CP170-N Centering Clamps.

*)To produce Jaws at customers, prepare ϕ10F8 mounting holes with 29±0.02 pitch.

■Serrated Jaw

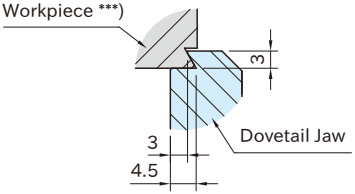
The serrated tips bite into workpiece and clamp powerfully.



**) Workpiece hardness should be HRC38 or less for use of serrated jaw.

■Dovetail Jaw

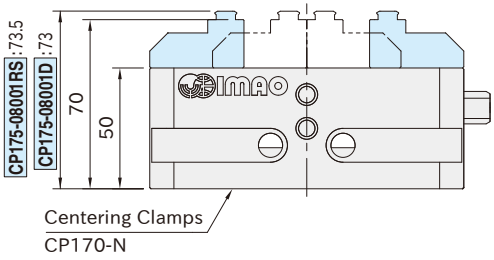
Dovetail jaw holds workpiece at two surfaces and provides positive clamping.



***) Preparation of dovetail groove on workpieces is required.
Usable as edge clamping jaws without dovetail preparation.

Technical Information

■Dimensions of Centering Clamps with Jaws



■Dovetail groove preparation

Machine dovetail grooves on workpiece to the specifications below.
