# 2023/2024 ZERO-POINT-SYSTEMS

# WE GENERATE EXCITEMENT.

Since the foundation of the company in 1890 until today the goal has remained the same: the highest quality in products and services. Nevertheless, the circumstances, tasks and challenges have changed, of course. By focussing on our core areas of expertise, we have long set new standards for innovative clamping technology - driven by our own development, the greatest possible flexibility and passion for individual solutions.

All this is only possible with committed and contented employees. Respectful interaction with others, personal development and measures for the wellbeing of each individual are therefore values that matter to us.

Company Management: Wolfgang Balle, Johannes Maier (CEO), Jürgen Förster

#### **OUR COMPANY HISTORY**

- 1890 Company founded as a lock manufacturer by Andreas Maier.
- 1920 Product range extended to include spanners.
- 1928 Production line assembly of FELLBACH LOCKS.
- 1951 Introduces clamping elements and diversifies into workpiece and tool clamping technology.
- 1965 Toggle clamps extend the AMF product range, AMF catalogues are now printed in ten languages.
- 1975 Further specialisation into hydraulic clamping technology.
- 1982 Clamping and fixture systems round off AMF's clamping expertise.
- 1996 AMF team organisation in all sectors of the business, Quality management with certification to ISO 9001.
- 2001 AMF Service Guarantee for all products.
- 2004 Introduction of the ZPS zero-point clamping system.
- 2007 The magnetic clamping technology extends the AMF product range.
- 2009 Development and marketing of AMF Vacuum clamping technology.
- 2012 LOW-COST AUTOMATION gripping, clamping, marking and cleaning.
- 2014 AMF presents the most extensive product range of automation solution in zero-point clamping technology.
- 2017 Wireless sensoring systems extend the expertise into Industry 4.0 and blends seamlessly into the AMF product range.

#### PLEDGES THAT COUNT IN EVERYDAY LIFE

For this reason, we have a few principles that we follow by conviction and which always apply.

#### INDIVIDUAL DEVELOPMENT

Even if the product you need does not even exist yet, we will find the right solution with you: from special designs to new developments, everything is possible.

#### WARRANTY

If, despite our high quality standard, there is a complaint, this is dealt with quickly and unbureaucratically, even beyond the warranty period.

#### **HIGHEST QUALITY STANDARDS**

Careful manufacturing based on tradition since 1890, and naturally with a modern quality management system according to ISO 9001 for many years.

#### SHORT DELIVERY TIME

With over 5,000 articles in our warehouse, you can expect your order to be dispatched on the same day.

#### **COMPETENT SERVICE FROM EXPERTS**

Your local retail partner or the specialists in our team will find the right solution for every task.

#### **MADE IN GERMANY**

Our entire product range is developed and manufactured exclusively by our employees in Germany.

ZERO-POINT-SYSTEMS 5

# ECONOMICAL, PRECISE, QUICK - THE AMF ZERO-POINT SYSTEM

By using modern AMF zero-point systems, you optimize fixture and workpiece changeover in your production, correspondingly reduce set-up times on the machine and so save money! The benefits of zero-point clamping technology are obvious:

- > Increase in machine run-time
- > Very fast workpiece or fixture changeover
- > High repeatability
- > A uniform interface for all machines
- > Positioning and clamping in a single step

> The pull-stud in our zero-point system is the interface between the machine table and the workpiece or fixture. It ensures exact positioning and secure clamping. The resulting work forces are transferred through the pullstud to the clamping module.

، ، ، ، ،

 $\supset$ 

The precisely manufactured clamping modules of the AMF Zero-Point System ensure a secure and firm hold of the workpiece or fixture to be clamped. With the high pull-in, closing and holding forces, they are suitable for every application.

Subject to technical alterations.

ANDREAS MAIER GmbH & Co. KG · Phone: +49 711 5766-196 · Web: www.amf.de

# AWLE

LARGE INTAKE CATCHMENT No laborious searching for the holes anymore - self-centring via the diagonal side surfaces of the engagement screw.

**SWING-FREE** Swing-free run-in and run-out through the optimal contour of the pull-stud.

**FORM FIT** The balls are optimally encapsulated on 3 sides. As a result, the pull-stud always remains firmly clamped in the module.

# YOUR ADVANTAGES -THOUGHT THROUGH IN DETAIL

Experience a zero point clamping system that, through its innovative and forward-looking features, presents its strengths in use in an advanced way.

Numerous advantages speak for themselves and make the AMF zero-point system into a technology that revolutionizes the zero-point clamping technology market.

**BLOW OUT** Our system has a pneumatic blow-out installed at the factory. As a result, chips and dirt inside are effectively blown out.

RUSTPROOF STAINLESS STEEL High-alloy, hardened tool steel - and so no corrosion.

complicated suctioning out.

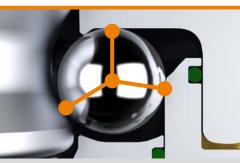

SIMPLE CLEANING

Our zero-point clamping sytems

can be blown out very simply with a

commercially available compressed

air cleaning pistol and do not require

## THREE-POINT PRINCIPLE

Power transmission by means of the three-point principle! This optimised force distribution prevents shearing load on the balls.

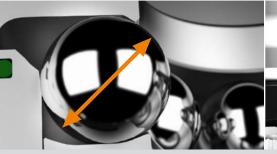

#### MEDIA FEED

Due to the lateral media feed, low pallet thicknesses are possible and fewer feed holes are necessary.

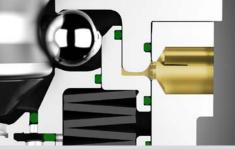

**NO BALL CAGE** The balls lie freely in the ball canal. This freedom of movement enables the balls to continuously re-position themselves.

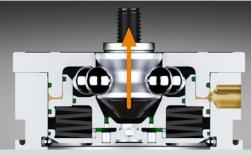

**LARGE BALL DIAMETER** Ball surface is 784% greater than with traditional ball systems.

**SAFETY SYSTEM** Process reliability - Clamping module always opens. A piston blockade is thus impossible.

#### GOOD HOLDING, PULL-IN AND LOCKING FORCES

Holding force of up to 105 kN\*. Pull-in and locking force of up to 40 kN.

\* Please observe the installation instructions.

# FAQS ABOUT ZERO-POINT CLAMPS AND THE AMF ZERO-POINT SYSTEM

# ARE SUBJECT TO THE AMF ZERO-POINT CLAMPING MODULE DEFINED IN STANDARD DIN EN ISO 13849?

> Yes, the AMF zero-point clamping modules in sizes KP, KH and BM were designed using the fundamental and proven safety principles defined in EN ISO 13849-2, Table A.1 and A.2 or B.1 and B.2, or Table C.1 and C.2. The user is obliged to comply with these safety principles during the implementation and operation of our products.

# WHAT IS PULL-IN FORCE / HOLDING FORCE?

> The pull-in force describes the force with which the stud is pulled in and clamped with positive interlocking in the clamping module. The holding force, in contrast, specifies the maximum permissible pull force of the engagement screw.

## WHAT IS REPEATABILITY?

> The repeatability specifies the tolerance range within which the recorded reference points on the workpiece lie after removal and reclamping of the same workpiece. The repeatability, also called repetition accuracy, is below 0.005mm.

# WHAT ADVANTAGES RESULT FROM THE USE OF ZERO-POINT, TIMING AND UNDERSIZE PULL-STUDS?

> These different types of pull-studs offset the spacing tolerances of pull-studs and clamping modules The fixed reference point is achieved through the zero-point pull-stud; the slit pull-stud serves to compensate for the still-free axis. The under size pull-stud does not have a centring function, but only a clamping and holding function.

# CAN I INSERT THE PULL-STUD DIRECTLY INTO THE WORKPIECE FOR MACHINE PROCESSING?

> The high costs for chucking fixtures and workpiece clamping can be effectively saved here if the pull-studs are mounted in the workpiece, which is clamped directly using the clamping modules. As a result, a complete 5-sided processing of the workpiece is possible in one chucking. With the different stud sizes (attaching thread M6 to M16), workpieces of different sizes can be clamped.

# HOW DOES THE SYSTEM COMPENSATE FOR HEAT, SUCH AS FROM METAL CUTTING?

> Through the different pull-stud designs, the system can compensate for temperature differences between the workpiece and the clamping module easily and controllably. For a graphic depiction of the stud array, see page 124 of the catalogue. If you have other technical questions, please contact us at any time.

Subject to technical alterations

ANDREAS MAIER GmbH & Co. KG · Phone: +49 711 5766-196 · Web: www.amf.de

# WHAT SHOULD BE THE SPACING TOLERANCE OF THE PULL-STUDS AND THE CLAMPING MODULES IF SELF-PRODUCED?

> The permissible spacing tolerance of pull-studs and clamping modules is +/- 0.01 mm.

# WHERE CAN I GET AN INSTALLATION DIAGRAM OR INSTALLATION MANUAL?

> We are happy to send them immediately when customers request them by e-mail.

## **IS THE CLAMPING MODULE SUITABLE FOR ERODING?**

> The module is optimally suited for all normal processes, such as eroding, grinding, cutting and turning. Through the complete sealing, the clamping module can be used in liquids and under rough ambient conditions.

# IS THE CLAMPING MODULE SUITABLE FOR USE ON INJECTION MOULDING MACHINES?

> Especially when injection moulds are changed frequently, the costs for a zero-point solution are amortized within the shortest of times for such machines. Unlike with mechanical clamps, clamping takes place quickly and easily just by pressing a button.

# HOW HIGH IS THE MAX. OPERATING TEMPERATURE OF THE CLAMPING MODULES?

The maximum processing temperature is 80°C in the standard design. Clamping modules for use at higher temperatures can be requested at any time.

## WHAT IS BLOW-OUT AND HOW DOES IT WORK?

> Blow-out using compressed air is guided through the floor of the clamping module and blows out contamination, such as chips, coolant or the like from the central opening and from the sphere space of the module.

# WHEN DO I USE THE HYDRAULIC PRESSURE INTENSIFIER AND WHEN THE PNEUMATIC PRESSURE INTENSIFIER?

> Hydraulic pressure intensifier: This transforms the pneumatic into hydraulic pressure in a ratio of 1:8 to open hydraulic modules. Pneumatic pressure intensifier: This is used to intensify the pneumatic pressure in the ratio of 1:2 for pneumatic clamping modules and compensates for pressure fluctuations in the supply line.

# HOW DOES THE PATENTED SAFETY SYSTEM WORK IN THE HYDRAULIC CLAMPING MODULE AND WHEN IS IT USED?

If the piston seal begins to leak, the spring space quickly fills with oil. The result is: The piston blocks and the module can no longer be opened. Destruction of the clamped fixture of the of clamping module would then be unavoidable. Here, the patented safety system ensures that the oil in the spring space can escape and the piston can be operated.

# ARE YOU PRODUCING YET OR STILL SETTING UP?

#### THE CALCULATION IS VERY SIMPLE!

It has been shown that you can reduce your set-up times by over 90% through the use of the AMF Zero-Point System. High machine standstill times are avoided, set-up times minimized and cash saved...

Take the time to calculate your savings potential with the AMF Zero-Point System very simply.

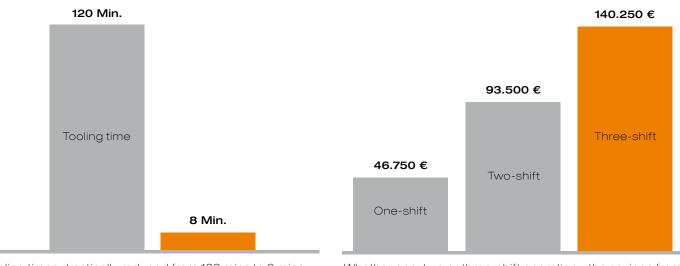

#### SAMPLE CALCULATION OF A CUSTOMER BEFORE AND AFTER USE OF THE ZERO-POINT SYSTEM

| Procedure   | Without zero-point clamping<br>system | With the AMF Zero Point<br>System |  |  |  |
|---|---------------------------------------|-----------------------------------|--|--|--|
| Machine costs                                       | €100/h                                | €100/h                            |  |  |  |
| Number of set-ups per shift (8h)                    | 4 ×                                   | 4 x                               |  |  |  |
| Set-up time per procedure                           | 30 mins.                              | 2 mins.                           |  |  |  |
| Set-up time per shift (8h)                          | 120 mins. (2 h)                       | 8 mins. (0,13 h)                  |  |  |  |
| Set-up costs per shift (8h)                         | €200                                  | € 13                              |  |  |  |
| Set-up costs per shift each year (250 working days) | € 50.000                              | € 3.250                           |  |  |  |
| Annual savings per shift (8h)                       | €46.750                               |                                   |  |  |  |

## DRASTICALLY REDUCED SET-UP TIMES GUARANTEE YOU WILL EXPERIENCE A RAPID RATIONALISATION EFFECT

If previously 120 mins had to be invested in four tooling procedures in a shift, the use of the AMF Zero Point System will reduce this to only 8 mins. Rapid switching of equipment and workpieces as well as tooling in parallel with operating time outside of the machine results in the rationalisation effect described.

The savings in our customer example of  $\leq$ 140.250 per year, for three-shift production utilisation, guarantees rapid amortisation of the invested amounts of approx.  $\leq$ 3,750 for a 4-capacity clamping station including accessories.

Tooling times drastically reduced from 120 mins to 8 mins through the use of the AMF Zero Point System. Whether one, two or three-shift operation - the savings from the AMF Zero Point System speak for themselves!

# **INSTALLATION CLAMPING MODULES**

The AMF installation clamping modules are used with low space requirement and low overall height. For installation in pallets, machine tables, clamping brackets and cubes. Usable when cutting, grinding, eroding and on plastic-processing machines as well as for fixture construction with mounting fixtures and handling systems. The AMF clamping modules can be installed in all positions. Whether vertical or overhead - mounting works completely without assembly tools.

Installation clamping modules come in 13 different sizes:

- > Clamping modules RP250 Ø 22 mm Insertion/locking force up to 0,1 kN - holding force 1 kN\*
- > Clamping modules RP251 Ø 22,4 mm Insertion/locking force up to 0,1 kN - holding force 1 kN\*
- Clamping modules SP140 Ø 15 mm
   Insertion/locking force up to 70 N holding force 500 N\*
- Clamping modules SP150 Ø 22 mm
   Insertion/locking force up to 0,23 kN holding force 6 kN\*
- > Clamping modules KP5 / KH5 Ø 45 mm Insertion/locking force up to 5 kN - holding force 13 kN\*
- > Clamping modules KP5.3 Ø 78 mm Insertion/locking force up to 1,3 kN - holding force 13 kN\*
- > Clamping modules KP10 / KH10 Ø 78 mm Insertion/locking force up to 10 kN - holding force 25 kN\*

- Clamping modules KH10.2 Ø 112 mm
   Insertion/locking force up to 10 kN holding force 25 kN\*
- Clamping modules KP10.3 Ø 112 mm
   Insertion/locking force up to 10 kN holding force 25 kN\*
- > Clamping modules KH20 / KP20 Ø 112 mm Insertion/locking force up to 20 kN - holding force 55 kN\*
- Clamping modules KP20.3 Ø 138 mm
   Insertion/locking force up to 17 kN holding force 55 kN\*
- Clamping modules KP20.4 Ø 112 mm
   Insertion/locking force up to 30 kN holding force 55 kN\*
- > Clamping modules KP40 / KH40 Ø 148 mm Insertion/locking force up to 40 kN - holding force 105 kN\*

\* Please observe the installation instructions.

#### **Application:**

Pneumatic zero point clamping system for set-up-time-optimised clamping during non-cutting machining.

Ideally suited for applications in the transfer automation range because no interference contour is present underneath the interchangeable pallet.

#### Note:

The zero-point clamping system is opened (1) pneumatically and locked mechanically by spring force. Subsequent uncoupling of the pressure line is possible at any time (zero-point clamping system is clamped at normal pressure).

The base plate serves as the contact surface, into which the zero-point clamping system is screwed. A suitable mounting tool is available under the order no. 559439.

\* Please observe the installation instructions.

| no.    |       | [N]                         | [N]            | [g]    |
| 567134 | RP251 | 100                         | 1000           | 32     |

#### **Application:**

Pneumatic zero point clamping system for set-up-time-optimised clamping during non-cutting machining.

Ideally suited for applications in the transfer automation range because no interference contour is present underneath the interchangeable pallet.

#### Note:

The zero-point clamping system is opened (1) pneumatically and locked mechanically by spring force. Subsequent uncoupling of the pressure line is possible at any time (zero-point clamping system is clamped at normal pressure). Venting is performed via a connection (5).

The base plate serves as the contact surface, into which the zero-point clamping system is screwed. A suitable mounting tool is available under the order no. 559439.

\* Please observe the installation instructions.

|      |        |       |     |      |     |

#### Application:

Zero-point clamping system for set-up-time-optimised clamping during cutting and non-cutting machining.

#### Note:

The installation clamping module has high holding, pull-in and locking forces. This is opened pneumatically (1) and locked mechanically through spring force. Subsequent uncoupling of the pressure lines is possible at any time (module is clamped pressure-free). The clamping module has one connection:

1x pneum. Open (1).

For ease of installation, we recommend the size 140 installation tool Order no. 564843 and the size 150 installation tool Order no. 565395.

\* Please observe the installation instructions.

| 428755 | KP20.3 | 17,0                        | 55             | •        | 2,6    |

#### **Application:**

Zero-point clamping system for set-up-time-optimised clamping during cutting and non-cutting machining.

#### Note:

The installation clamping module has high holding, pull-in and locking forces. This is opened pneumatically (1) and mechanically locked through spring force. Subsequent uncoupling of the pressure lines is possible at all times (module is tensioned pressure-free).

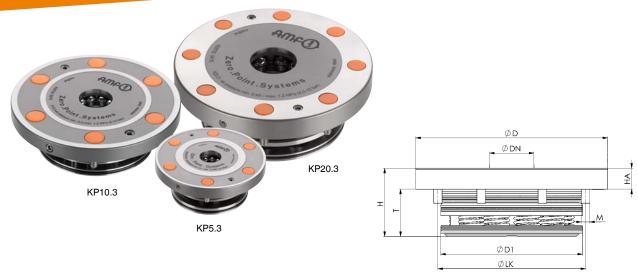

The clamping module with blow-out and support control has two connections:

1x pneum. opening (1), 1x pneum. blow-out and support control (3). (The pneumatic blow-out and support control can optionally be connected.)

\* Please observe the installation instructions.

# **SIMPLIFIED INSTALLATION IN THE BODY** - THE INSTALLATION CLAMPING MODULE AS FLANGE VERSION

The flange version of the installation clamping module has a centring ring on the underside. This allows simplified and precisely positioned installation of the module in the body. Through the low depth of the required mounting hole for the centring ring, existing fixtures and be easily and inexpensively refitted with the AMF Zero-Point System. The clamping module can be operated from the outside via a tube connection or from the bottom via an O-ring connection.

# Installation clamping module, flange version

Pneumatic opening.

Opening operating pressure: min. 8 bar - max. 12 bar. Retensioning operating pressure (turbo): min. 5 bar - max. 6 bar. Cover and piston hardened. Repeatability < 0.005 mm.

| Order  | Size | Pull-in/locking force up to | Holding force* | Weight |
|--------|------|-----------------------------|----------------|--------|
| no.    |      | [kN]                        | [kN]           | [Kg]   |
| 424101 | KP10 | 8                           | 25             | 1,35   |
| 423988 | KP20 | 17                          | 55             | 3,75   |
| 424168 | KP40 | 30                          | 105            | 4,97   |

## Application:

Zero-point clamping system for set-up-time-optimised clamping during cutting and non-cutting machining.

#### Note:

The flange version permits a simplified installation in the body. This is exactly positioned via the centring function. This is opened pneumatically (1) and mechanically locked through spring force. To achieve the specified pull-in and locking forces, this must be briefly retensioned pneumatically (turbo) (2). Subsequent uncoupling of the pressure lines is possible at all times (module is tensioned pressure-free).

Use of the pneumatic pressure booster 6370ZVL is recommended.

The clamping module has two connections:

1x pneum. opening (1) / 1x pneum. retensioning (turbo) (2).

\* Please observe the installation instructions.

#### Design:

As standard, there is a manaul (hand power) or hydraulic run-out and run-in movements of the suspension piston.

- Cylinder has one connection: 1x hydr. opening (1),

- Cylinder with hydraulic advance motion has three connections: 1x hydr. opening (1),

Run out 1x hydr. suspension piston opening (5), run in 1x hydr. suspension piston opening (4).

#### Application:

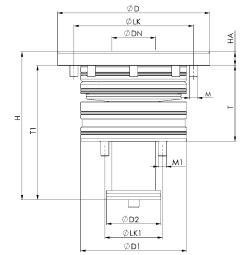

Zero-point clamping system for set-up-time-optimised clamping during cutting and non-cutting machining. For installation in clamping profiles, cubes and towers. The horizontal toggle clamp cylinder is used to change fixtures quickly and easily by means of the suspension piston with hand force, hydraulic or handling device.

#### Note:

The horizontal rapid-clamping cylinder has high holding, pull-in and locking forces. This is opened hydraulically (1) and mechanically locked through spring force. Subsequent uncoupling of the pressure lines is possible at all times (module is tensioned pressure-free). The maximum weight per suspension piston must not exceed 5 kN at KH20 and 8 kN at KH40. \* Please observe the installation instructions.

# AWLE

# HORIZONTAL RAPID-CLAMPING CYLINDER

This is how to make vertical palletization quick and uncomplicated:

- > No searching for the holes
- > No hydraulic or pneumatic pre-tensioning
- > No damage from zero-point hole and pull-stud
- > No risk of injury
- > Reduced set-up times and thus cost savings

Flexibly usable in clamping towers, clamping brackets, automated handling devices or in general machine building.

> Whether by hand, with crane, handling device or robot: Horizontal rapid-clamping cylinders offer maximum protection and comfort.

> After the pallet has been mounted, it can easily be pushed in and out. This process can be automated, if desired.

Subject to technical alterations.

ANDREAS MAIER GmbH & Co. KG · Phone: +49 711 5766-196 · Web: www.amf.de

### **Compact cylinder**

Hydraulic opening. Opening operating pressure: min. 50 bar - max. 60 bar. Cover and piston hardened. Repeatability < 0.005 mm.

**Compact cylinder** 

#### **Application:**

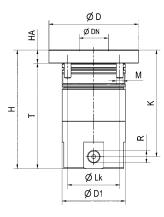

For retrofitting to modular profiles, columns, tombstones and cubes. Can be used with thin wall sections.

Note:

There are six standard connection options. Four connections are located on the side of the lateral surface at 90° intervals. Seals on the external diameter make it possible to connect a deep-hole drill bore in the base plate. Connection is also possible on the floor surface of the compact cylinder. \* Please observe the installation instructions.

# SURFACE-MOUNTED CLAMPING MODULES

The AMF surface-mounted clamping modules are installed on pallets, machine tables, clamping brackets and cubes. Usable when cutting, grinding, eroding and on plastic-processing machines as well as for fixture construction with mounting fixtures and handling systems.

The AMF clamping modules can be installed in all positions. Whether vertical or overhead - mounting works completely without assembly tools.

Surface-mounted clamping modules are available in four different sizes:

- > Clamping modules KH5 / KP5 dia. 62 mm pull-in/locking force up to 5 kN - holding force 13 kN\*
- > Clamping modules KH10 / KP10 dia. 78 mm pull-in/locking force up to 10 kN - holding force 25 kN\*
- > Clamping modules KH20 / KP20 dia. 112 mm pull-in/locking force up to 20 kN - holding force 55 kN\*
- > Clamping modules KH40 / KP40 dia. 148 mm pull-in/locking force up to 40 kN - holding force 105 kN\*

\* Please observe the installation instructions.

Subject to technical alterations.

To achieve the specified pull-in and locking forces, it must be briefly retensioned pneumatically (turbo) (2). Subsequent uncoupling of the pressure lines is possible at all times (module is tensioned pressure-free). Use of the pneumatic pressure booster 6370ZVL is recommended.

The clamping module with blow-out and support control has three connections:

1x pneum. opening (1) / 1x pneum. retensioning (turbo) (2), 1x pneum. blow-out and support control (3). (The pneumatic blow-out and support control can optionally be connected.)

\* Please observe the installation instructions.

#### On request:

- Individual housing

### **Application:**

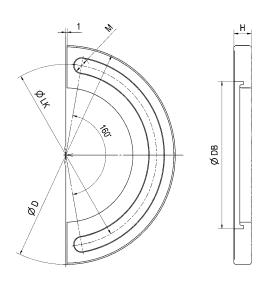

Clamping flanges are used to fasten surface-mounted clamping modules on the machine table.

#### On request:

- Special clamping flanges for various T-slot tables

- Clamping flange and housing manufactured as a single piece

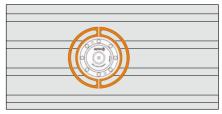

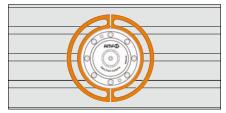

## Examples of machine-table mounting:

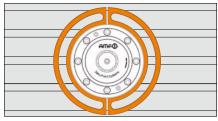

#### K10 - Groove distance 50 mm

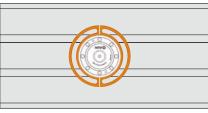

#### K20 - Groove distance 50 mm

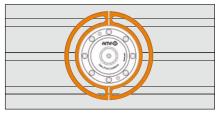

K40 - Groove distance 50 mm

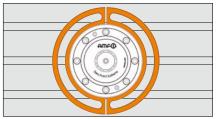

#### Groove distance 63 mm

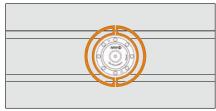

#### Groove distance 63 mm

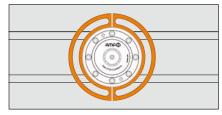

### Groove distance 63 mm

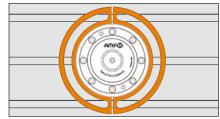

#### Groove distance 80 mm

#### Groove distance 80 mm

#### Groove distance 80 mm

# AUTOMATION SOLUTIONS FROM AMF

The enormous capability and flexibility of use of modern processing machines is undisputed. To be able to use these capabilities in reality requires more than just fast machines. An automation solution consists today of a number of multiply linked, versatile products and technologies. Through the possibility of a fully automatic and process-sure machine configuration, our automation solutions meet the requirements for seamless integration into the automation system. Numerous sensing options, optional media ducts and blow-out and blow-off of the modules speak for themselves!

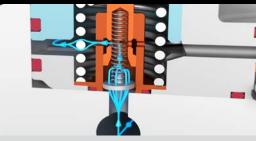

Persuade yourself of the automation potential of the AMF zero-point clamping modules!

#### **IS THE MODULE OPEN?**

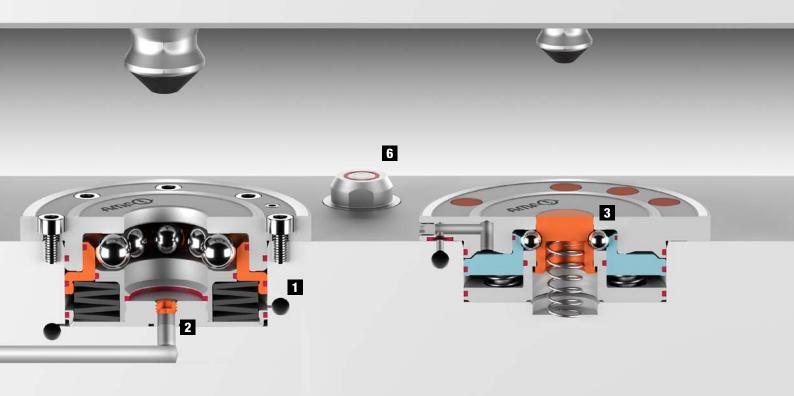

Through the direct monitoring of the piston position (opened) by means of pneumatic back pressure, the position can be sensed by means of a differential pressure switch.

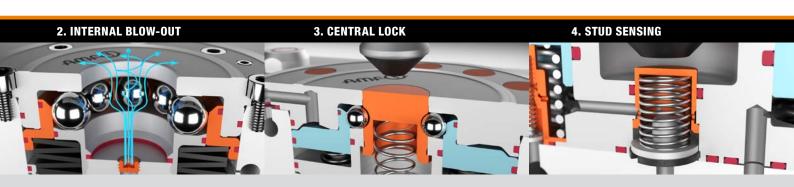

#### **5. LOCKING CONTROL**

### **IS THE MODULE LOCKED?**

With an open module, the integrated stop valve creates a pneumatic static pressure, which is sensed via a differential pressure switch.

# DIRT AND CHIPS IN THE CLAMPING MODULE?

Blowing out with compressed air cleans the inside from all dirt and chips and can be used simultaneously for workpiece support control by means of a differential pressure sensor.

# DIRT AND CHIPS UNWELCOME IN THE MODULE?

The lagging central lock prevents penetration of dirt and chips when the pull-stud is being run out. The central lock replaces the previously required protection pull-stud.

#### IS THE PULL-STUD PRESENT ON THE FIXTURE?

The retracting stud actuates a stop valve, which eliminates the pneumatic or hydraulic static pressure. This condition is sensed via a differential pressure switch.

#### 6. MEDIA DUCTS

#### 7. BLOW-OFF/SUPPORT CONTROL

#### 8. ELECTRICAL SENSING

# ARE MEDIA DUCTS TO A FIXTURE NECESSARY?

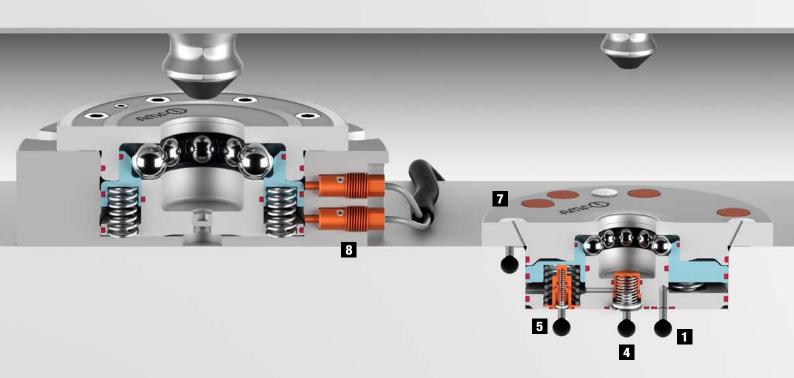

Oil, compressed air, water, etc. can be run through our couplings without leaks.

#### CHIPS AND DIRT? IS A WORKPIECE Lying without gap or not?

The blow-out function with compressed air cleans the support surfaces and can be used simultaneously for workpiece support control by means of a differential pressure sensor.

#### IS THE MODULE OPEN OR CLOSED?

The integrated inductive sensor can sense the piston position (open/closed) of the clamping module.

#### No. 6103LA-5

#### Installation clamping module for automation solutions, screw-in version

Pneumatic opening. Pneumatic blow-out.

Opening operating pressure: min. 8 bar - max. 12 bar. Retensioning operating pressure (turbo): min. 5 - max. 6 bar Cover and piston hardened.

Repetition accuracy < 0,005 mm.

With locking control (pneum.), opening control (pneum.) and support control (pneum.).

### Automation solutions of AMF

| Order  | Size | Pull-in/locking force up to | Holding force* | Blow out | Weight |
|--------|------|-----------------------------|----------------|----------|--------|
| no.    |      | [kN]                        | [kN]           |          | [g]    |
| 561992 | KP5  | 1,5                         | 13             | •        | 175    |

#### Design:

Centric blow-out, support control, opening and locking control.

#### **Application:**

Zero-point clamping system for automation solutions for set-up-time-optimised clamping during cutting and non-cutting machining.

#### Note:

Locking control: Dynamic pressure with locked clamping module, flow-through with opened clamping module.

Opening control: Dynamic pressure with opened clamping module, flow-through with locked clamping module.

The installation clamping module is opened pneumatically and locked mechanically by spring force. To achieve the specified pull-in and locking forces, it must be briefly retensioned pneumatically (turbo) (5).

Subsequent uncoupling of the pressure line is possible at any time (module is clamped at normal pressure).

The contact surface is the upper surface of the housing. It is recommended to use a pneumatic pressure booster no. 6370ZVL. Matching mounting tool is available under the AMF order no. 41046.

The clamping module has five connections:

1 = pneum. Opening

3 = pneum. Blow-out

4 = pneum. Opening control inlet

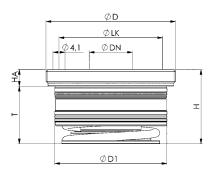

5 = pneum. Retensioning and venting

8 = pneum. Inlet locking control

\* Please observe the installation instructions.

#### Design:

Flow meter for hydraulic volume flow of 0.02 - 2.0 l/min incl. 5-metre connecting cable.

Technical data:

Nominal diameter: DN008 Connection: Internal thread G1/4 Compressive strength: PN 200 Measurement range: 0.02 - 2.0 l/min Medium temperature: - 25 ... + 80 °C Ambient temperature: - 20 ... + 70 °C Programming: via adjusting ring POM Electrical connection: Round plug M12 x 1.5-polig Power supply: 18 ... 30 V DC Protection class: IP 67 Hysteresis: adjustable Display: LCD Display + LED

#### **Application:**

Through the very exact measurement resolution of this unit, it is possible to check and monitor whether the zero-point clamping system is in an opened or closed state. The gearwheel flow meter measures the hydraulic flow in the connection lines of the AMF zero-point clamping system for automation and emits an output signal when the preset threshold value is reached.

| 559089 | SP150 | 235                         | 6000           | 51     |

#### **Application:**

Zero-point clamping system for automation solutions for set-up-time-optimised clamping during cutting and non-cutting machining.

#### Note:

The installation clamping module has high holding, pull-in and locking forces. This is opened pneumatically (1) and locked mechanically through spring force. Subsequent uncoupling of the pressure lines is possible at any time (module is clamped pressure-free).

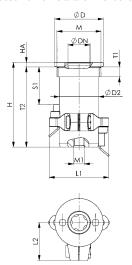

The clamping module has one connection:

1 = pneum. opening

The installation clamping module with sensor query contains the fastening kit order no. 559403. It has two reed sensors with connection cables ( $\emptyset$  0.75 mm, cable length 100 mm) for status check opened / locked and a fastening clamp.

For simple installation of the installation clamping module, we recommend the AMF pin wrench, order no. 50914.

#### \* Please observe the installation instructions.

#### No. 6109ZB-150

#### Fastening kit with sensors

Suitable for installation clamping module SP150 with sensor query.

| Order  | Size | dia. D | н  | L1 | L2   | Weight |
|--------|------|--------|----|----|------|--------|
| no.    |      |        |    |    |      | [g]    |
| 559403 | 150  | 18     | 16 | 27 | 17,2 | 4      |

#### Note:

The fastening kit contains two reed sensors with connection cables (Ø 0.75 mm, cable length 100 mm) for status check opened / locked and a fastening clamp. This kit can be factored to the clamping module SP160 with concer quory.

This kit can be fastened to the clamping module SP150 with sensor query.

#### No. 6104L

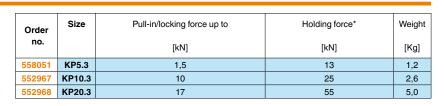

#### Clamping module with sensor query for opening and interlock

Pneumatic opening. Operating pressure for opening: KP5.3 min. 5 bar - max. 12 bar. KP10.3 min. 5 bar - max. 12 bar. KP12.3 min. 4.5 bar - max. 12 bar. Cover and piston hardened. Flange housing: aluminium. Repetition accuracy < 0.005 mm.

INOX STAINLESS STEEL

#### **Application:**

Zero-point clamping system for automation solutions for set-up-time-optimised clamping during cutting and non-cutting machining.

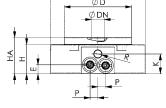

#### Note:

The clamping module with sensor query has two inductive sensors (connection type: plug S8, cable length 150 mm) for the status check (opened / locked). This is opened pneumatically (1) and locked mechanically through spring force. Subsequent uncoupling of the pressure line is possible at any time (module is clamped at normal pressure).

- The clamping module has one connection:
- 1 = pneum. opening

#### Note:

552964

552965

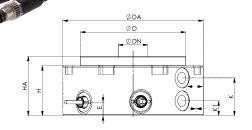

The installation clamping module with sensor query contains 2 inductive sensors (connection type: S8 plug, cable length: 150 mm) for status check (opened / locked). This is pneumatically opened (1) and mechanically locked through spring force. To achieve the specified pull-in and locking forces, it must be briefly retensioned pneumatically (turbo) (2). Subsequent uncoupling of the pressure lines is possible at any time (module is clamped pressure-free). Use of the pneumatic pressure booster no. 6370ZVL is recommended.

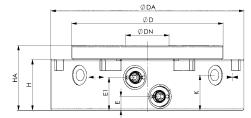

The clamping module has two connections:

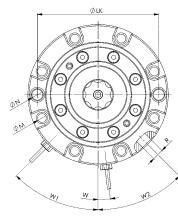

1 = pneum. opening

2 = pneum. retensioning (turbo)

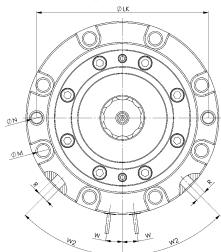

\* Please observe the installation instructions.

#### **Application:**

Mechanical zero point clamping system for set-up-time-optimised clamping during non-cutting machining.

#### Note:

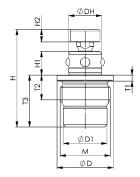

The mechanical zero-point clamping system is opened by pressing the actuator knob with hand force. Interlock is achieved mechanically via spring force. A tool is not required for this. The base plate serves as the contact surface, into which the clamping module is screwed. An extended actuating pin with a height of 20 mm is available under the order no. 561391. A suitable mounting tool is available under the order no. 559439.

Order numbers of the clamping sleeves: 559092 and 559093.

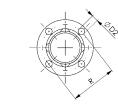

\* Please observe the installation instructions.

#### **Application:**

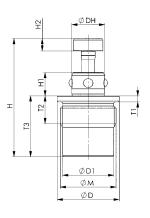

Mechanical zero point clamping system with detent function for set-up-time-optimised clamping during non-cutting machining. Very suitable for clamping smaller fixtures, e.g. in assembly.

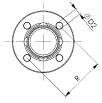

#### Note:

The mechanical zero-point clamping system is opened by pressing the actuator knob with hand force and it remains in this position. Locking involves pressing the actuator knob again mechanically using spring force. A tool is not required for this. The base plate serves as the contact surface, into which the clamping module is screwed. An extended actuating pin with a height of 20 mm is available under the order no. 561391. A suitable mounting tool is available under the order no. 559439. \* Please observe the installation instructions.

#### **Application:**

Mechanical zero point clamping system for time-optimised clamping during cutting and non-cutting machining. Especially suitable for the modular design of clamping solutions via zero point clamping system.

#### Note:

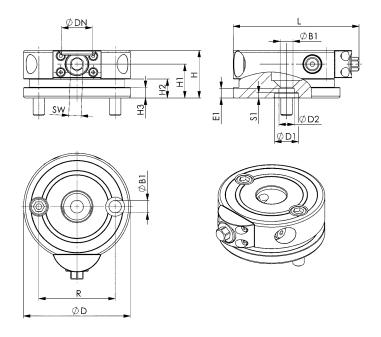

The mechanical assembly clamping module has high holding, pull-in and locking forces. The clamping module can be positioned on the machine table and fastened with standard clamping elements at the circumferential clamping rim.

The positioning bore for stop sleeves and a through-hole for fastening onto grid plates with countersunk head screws are present underneath (observe the max. permitted screw force). The mounting bore for the 20 pull-stud is also in the module.

Pull-stud: The zero point, timing or undersize pull-stud (without colour coding) can be used, depending on the application. The BM10 clamping module can only be used with the size 10 pull-studs in the M8 version, BM20 only with the size 20 pull-studs in the M12 version.

The fastening bolts are supplied as standard.

This clamping module can be used at ambient temperatures of up to max. 200°C. \* Please observe the installation instructions.

#### **Application:**

Mechanical zero point clamping system with indexing grooves offset by  $90^\circ$  for time-optimised clamping during cutting and non-cutting machining.

Especially suitable for the modular design of clamping solutions via zero point clamping system.

#### Note:

The mechanical assembly clamping module with indexing notches offset by  $90^\circ$  has high holding, pull-in and locking forces.

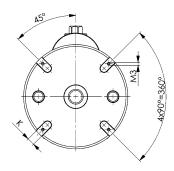

The clamping module can be positioned on the machine table and fastened with standard clamping elements at the circumferential clamping rim.

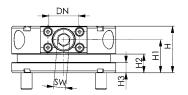

The positioning bore for stop sleeves and a through-hole for fastening onto grid plates with countersunk head screws are present underneath (observe the max. permitted screw force). The mounting bore for the 20 pull-stud is also in the module.

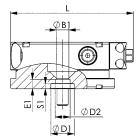

Pull-stud: The zero point, timing or undersize pull-stud (without colour coding) can be used, depending on the application. The BM10 clamping module can only be used with the size 10 pull-studs in the M8 version, BM20 only with the size 20 pull-studs in the M12 version.

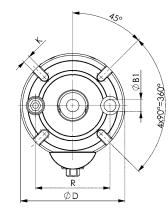

A cylinder pin, as well as fastening bolts for use with the support elements (6210S) or for use on a fixture, are supplied as standard.

This clamping module can be used at ambient temperatures of up to max. 200°C. \* Please observe the installation instructions.

| 562356 | BM20 | 10                          | 55             | 30                | 5,1    |

#### **Application:**

Mechanical "double clamping module" for setting time-optimised clamping during cutting and noncutting machining. Especially suitable for the modular design of clamping solutions via zero point clamping system.

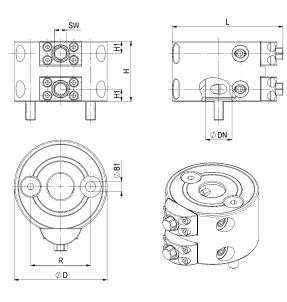

#### Note:

This clamping system combines two separately operable mechanical zero-point clamping systems. In conjunction with the pull-stud for T-slots, this clamping module is simply and quickly fastened to the machine table via clamping slots. Additional height adapters, workpieces or fixtures can be fastened to the top with pull-studs.

Pull-stud: The zero point, timing or undersize pull-stud (without colour coding) can be used, depending on the application. The BM10 clamping module can only be used with the size 10 pull-studs in the M8 version, BM20 only with the size 20 pull-studs in the M12 version.

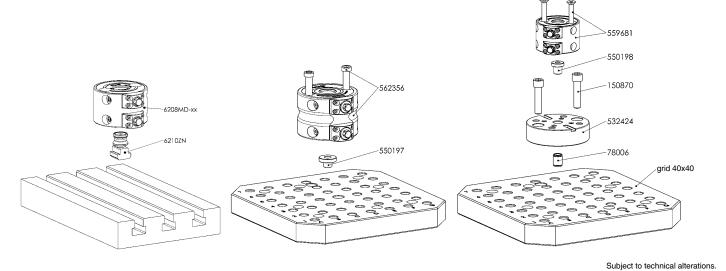

The fastening bolts are supplied as standard.

- This clamping module can be used at ambient temperatures of up to max. 200°C.
- \* Please observe the installation instructions.

| 550441 | 20   | 14 | 32      | M12 | 23 | 45 | 143    |
| 550442 | 20   | 16 | 32      | M12 | 23 | 45 | 147    |
| 550443 | 20   | 18 | 32      | M12 | 23 | 50 | 157    |

#### **Application:**

The pull-stud for T-slots enables the AMF zero-point clamping system to be positioned and clamped directly to the machine table by means of clamping slots.

These pull-studs can be used for pneumatic, hydraulic and mechanical clamping modules, and also for mechanical double clamping modules.

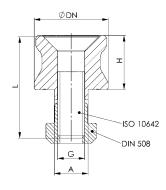

#### Advantage:

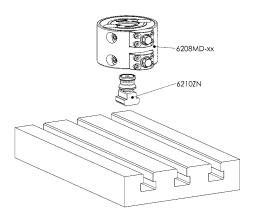

Simple, quick and flexible clamping of workpieces on the machine table with varying clearances of the pull-stud bores.

#### Note:

Supplied as standard is, as shown:

- zero point pull-studs with slot (dimension A) T-nut
- countersunk head screw (strength class 10.9)

# AWLE

#### No. 6212M

#### Clamping module, mechanical

Open and close mechanically. Tool steel, hardened. Repetition accuracy < 0.01 mm.

### **Clamping module, mechanical**

| Order  | Size | Pull-in/locking force up to | Holding force* | Weight |
|--------|------|-----------------------------|----------------|--------|
| no.    |      | [kN]                        | [kN]           | [g]    |

#### **Application:**

Mechanical zero point clamping system for setting time-optimised clamping during cutting or noncutting machining. Particularly suitable for the modular design of clamping solutions via zero point clamping system.

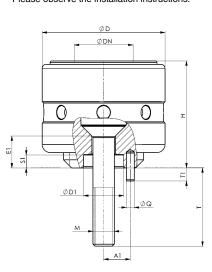

#### Note:

The mechanical zero-point clamping system has high holding, pull-in and locking forces. The B10 clamping module is fastened centrically with an M8 flat-head screw, the BM20 clamping module with an M12 cylinder screw.

The BM20 clamping module can only be used with the B20 pull-studs in the M12 version.

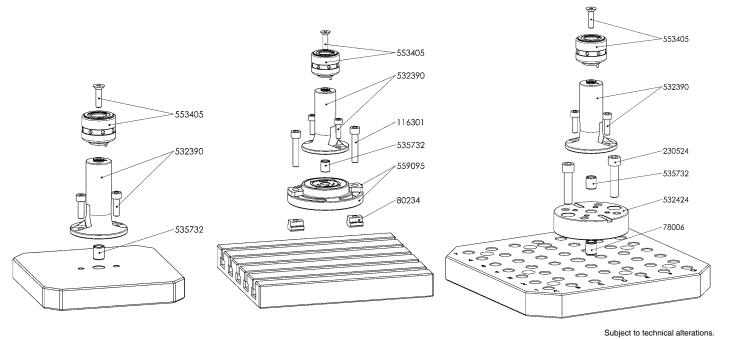

- To open and close the clamping modules, we recommend the following AMF hook spanner: size 10= order no. 54940
- size 10= order no. 54940 - size 20= order no. 54973

A cylinder pin is supplied as standard. In addition, fastening bolts for use with the support elements (order no. 532390, 532374) and for use on a fixture are included. \* Please observe the installation instructions.

### SIMPLY CLEVER COMBINATIONS -MODULAR HEIGHT ADAPTER FOR YOUR FLEXIBLE PRODUCTION

With the new modular height adapters from AMF, your production becomes even more flexible and economical. Cleverly combined, you now have an efficient opportunity to adapt your production process more simply, flexibly and quickly to constantly changing requirements.

ANDREAS MAIER GmbH & Co. KG · Phone: +49 711 5766-196 · Web: www.amf.de

The modular height adapters consist of three levels. The foot elements form the interface to the existing machine table. Building on this and with the use of intermediate elements, every clamping height can be achieved and, by combining different sizes, adapted flexibly to the contour of the workpiece.

Assembly elements with integrated zero point clamping modules of the AMF Zero Point system complete the adapters. Through this, the workpiece is clamped in a process-reliable way.

#### THE ADVANTAGES:

- > Simple direct clamping of the workpiece
- > Flexibly adaptable to every workpiece size and thickness
- > Convenient 5-sided processing
- > Freely selectable standard dimension

#### No. 6210H-10-05

# Adapter clamping module B10 to BH5, hydr.

Housing: tempered steel, gas-nitrided and oxidised. Clamping module: cover and piston hardened.

| Order  | Size | Pull-in/locking force up to | Holding force* | Weight |
|--------|------|-----------------------------|----------------|--------|
| no.    |      | [kN]                        | [kN]           | [g]    |
| 534776 | BH5  | 5                           | 13             | 2328   |

#### **Application:**

The adapter element is used to reduce the intermediate element size B10 to the hydraulic clamping module BH5. Workpieces or fixtures can be clamped with repetition accuracy directly onto the hydraulic clamping module BH5 using pull-studs.

This clamping system can be used to move workpieces to the required machining height in the machine for 5-sided machining, or for the safe and quick clamping of workpieces with ledges and different clamping heights on the machine table.

#### Advantage:

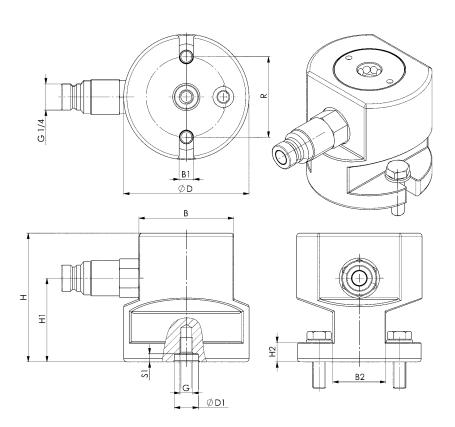

Simple, quick and flexible clamping of complex workpiece contours on the machine table. Especially suitable for levelling workpieces or clamping fixtures at the necessary machine heights in the machine tool and for the reliable clamping of same.

#### Note:

Order no. for the centering sleeve Ø 15 mm: 535732

The hydr. quick-release coupling, connector version, and the fastening screws are supplied as standard.

\* Please observe the installation instructions.

#### **Dimensions:**

### **Collet attachment for clamping module**

#### No. 6370ZSZ-112

# Collet attachment for clamping module KH20 and BH20, hydr.

Material: high-strength aluminium.

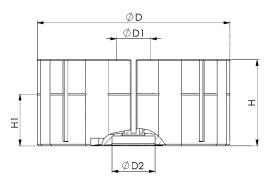

| Order  | dia. D | dia. D1 | ØD2<br>0/+0.01 | Clamping stroke Ø | Н  | H1 | Weight |
|--------|--------|---------|----------------|-------------------|----|----|--------|
| no.    |        |         |                | [mm]              |    |    | [g]    |
| 550286 | 112    | 20      | 25             | 0,5               | 50 | 30 | 1133   |

#### Design:

The collet attachment with a diameter of 112 mm is suitable for the AMF zero-point hydraulic clamping modules KH20 (Order no. 428425) and BH20 (Order no. 534412) with indexing. The collet is made from anodised, high-strength aluminium.

#### Application:

The collet attachment is placed on the AMF Zero Point clamping system size KH20 or BH20 in the hydraulic version and guides the radial clamping force to the workpiece after the clamping module is closed. The workpiece contour is milled into the collet attachment with a minimum clamping depth of 2 mm. The collet attachment can be milled off to a height of H1, allowing new workpiece contours to be introduced. The maximum workpiece diameter is 100 mm.

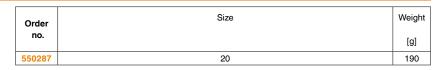

#### No. 6370ZSB

#### Mounting kit for collet attachment

for collet No. 6370ZSZ-112

#### Design:

The mounting set includes:

- 1 pull-stud size 20, design: sword
- 1 captive screw size 20
- 1 lock nut M12 2 indexing notches, width 8 mm

#### 5

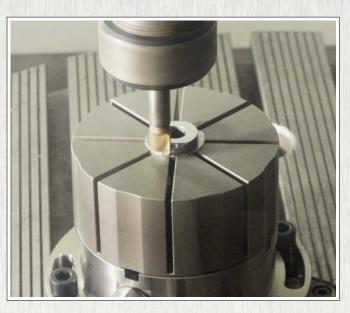

#### **Application:**

The mounting set is mounted with the collet attachment 112 mm, order no. 550286. After installation, the collet attachment can be securely and hydraulically clamped onto the AMF clamping modules, size 20.

| 532432       | B20  | 95-105     | 2020          |

#### **Application:**

The support element enables workpieces to be received into the bore for the pull-stud, depending on size (10 or 20) and to be clamped to the main or the intermediate element. Thanks to the adjustment and counter option, the support element can be steplessly adapted to the workpiece contour by  $\pm 5$ mm.

This clamping system can be used to move workpieces to the required machining height in the machine for 5-sided machining, or for the safe and quick clamping of workpieces with ledges and different clamping heights on the machine table.

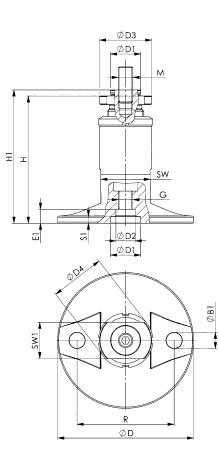

#### Advantage:

Simple, quick and flexible clamping of complex workpiece contours on the machine table. Especially suitable for levelling workpieces or clamping fixtures at the necessary machine heights in the machine tool and for the reliable clamping of same.

#### Note:

Order numbers for the centering sleeves:

- Ø15: Order no. 535732
- Ø16: Order no. 78006 - Ø22: Order no. 78238

### No. 6210AGS

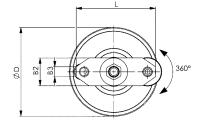

#### Adapter with straight clamp

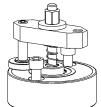

Adapter made from tempered steel, plasma-nitrided and burnished. Clamp burnished from tempered steel.

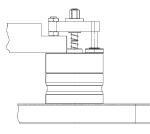

### Adapter with straight clamp

| Order<br>no. | Size | H ±0,1 | H1      | Weight<br>[g] |
|--------------|------|--------|---------|---------------|
| 567136       | B10  | 28     | 15 - 40 | 1225          |
| 567137       | B20  | 40     | 15 - 45 | 3600          |

#### **Application:**

The adapter is used with a straight clamp to implement the first clamping of a workpiece by the AMF modular system. For this, the adapter can be clamped to basic or intermediate elements of sizes B10 and B20, or to clamping modules BH10, BP10, BH20, BP20.

The adapter has an integrated stop for the workpiece and a supporting spring element to hold the clamp in position which simplifies handling. The clamping height is variable and different compression pieces can be used to adapt to the clamp.

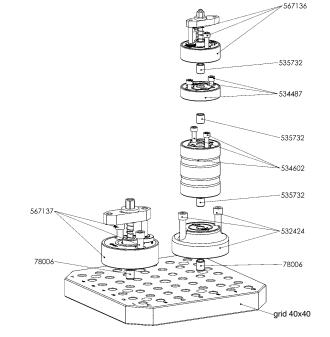

#### Advantage:

Simple, quick and flexible clamping of complex workpiece contours on the machine table. Especially suitable for moving workpieces into the required height for machining in the machine tool and to clamp it safely.

#### Note:

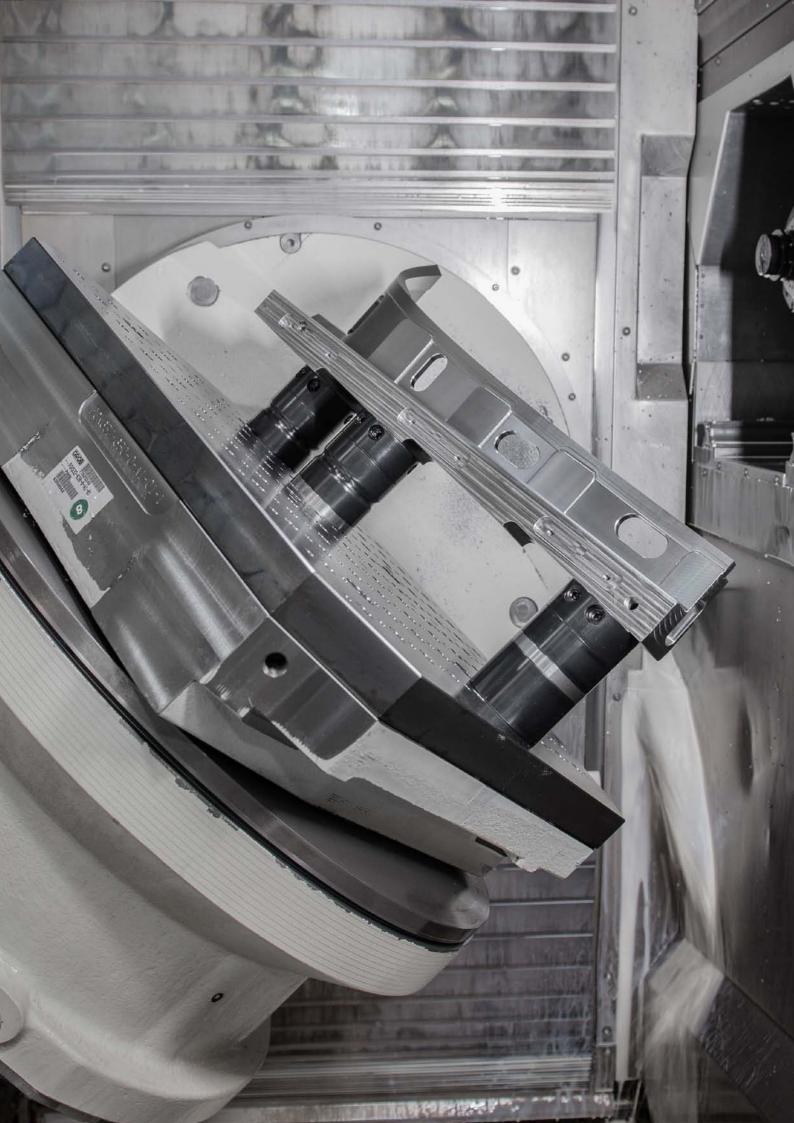

The fastening bolts are supplied as standard.

Suitable compression pieces, e.g. 7110DIX-\*\*xM\*\* and 7110DKX-\*\*xM\*\* can be found in the AMF "Standard clamping elements" catalogue.

**Counterbalance element XY-plane** 

#### **Application:**

The counterbalance element can compensate for a position tolerance of up to 4 mm in the plane. It is used to compensate for distance tolerances of the pull-studs. The upper part can be pushed to the base in the opened condition and is clamped without twisting by actuating the clamping screw.

#### Advantage:

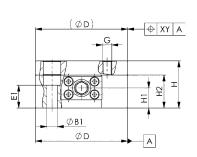

Simple, quick and flexible clamping on the machine table of complex workpiece contours with large pull-stud distance tolerances.

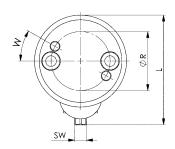

#### Note:

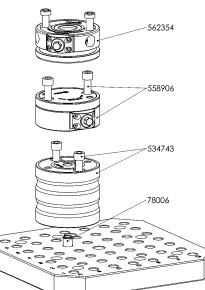

The fastening bolts are supplied as standard.

Height adjustment element

#### **Application:**

The height counterbalance element is used to clamp a workpiece distortion-free, beginning with the fourth support point. The element attaches itself by spring force and is then fastened by turning the clamping screw. The height counterbalance element is normally extended. This element can also be used as a support element to prevent bending and vibration of the workpieces.

#### Advantage:

Simple, quick and flexible clamping of complex workpiece contours on the machine table. Particularly suitable for levelling workpieces or clamping fixtures at the necessary machine heights in the machine tool for clamping these securely.

•

| 534743       | B20  | 100        | 7012   |

#### Application:

The intermediate elements are used as height adapters for workpieces and clamping fixtures, and are mounted to the main elements. Workpieces are clamped by means of assembly elements. This clamping system can be used to move workpieces to the required machining height in the machine for 5-sided machining, or for the safe and quick clamping of workpieces with ledges and different clamping heights on the machine table.

#### Advantage:

Simple, quick and flexible clamping of complex workpiece contours on the machine table. Especially suitable for levelling workpieces or clamping fixtures at the necessary machine heights in the machine tool and for the reliable clamping of same.

#### Note:

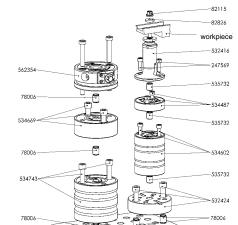

For the adaptation to zero point clamping modules, with the exception of the installation heights H20, 28 and 30, the mounting bore for the pull-studs, corresponding to sizes 10 and 20, is already made in the intermediate element.

If two or more intermediate elements are used, they can be axially aligned and then bolted using centring sleeves. The fastening bolts are supplied as standard.

When fastening to AMF grid plates, pay attention to bolt lengths!

Order numbers on the centring sleeves:

#### **Application:**

The intermediate elements with indexing are used as height adapters for workpieces and clamping fixtures, and are mounted to the main elements. Workpieces are clamped by means of assembly elements.

This clamping system can be used to move workpieces to the required machining height in the machine for 5-sided machining, or for the safe and quick clamping of workpieces with ledges and different clamping heights on the machine table.

different clamping heights on the machine table. Thanks to the 4-point 90° indexing option, workpieces under strong machining forces can be secured to prevent radial distortion.

#### Advantage:

Simple, quick and flexible clamping of complex workpiece contours on the machine table. Especially suitable for levelling workpieces or clamping fixtures at the necessary machine heights in the machine tool and for the reliable clamping of same.

#### Note:

For the adaptation to zero point clamping modules, with the exception of the installation heights H20, 28 and 30, the mounting bore for the pull-studs, corresponding to sizes 10 and 20, is already made in the intermediate element.

If two or more intermediate elements are used, they can be axially aligned and then bolted using centring sleeves. The fastening bolts are supplied as standard.

When fastening to AMF grid plates, pay attention to bolt lengths!

Order numbers of the centring sleeves:

- size 10: Order no. 535732 - size 20: Order no. 78006

ZERO-POINT-SYSTEMS 81

### **Base element**

#### No. 6210IFR

### Base element, with indexing for grid plates

Tempered steel, plasma-nitrided and burnished.

| Order<br>no. | Size | H<br>±0.01 | Weight<br>[g] |
|--------------|------|------------|---------------|
| 532424       | M12  | 30         | 2018          |
| 532440       | M16  | 40         | 3881          |

#### **Application:**

The main element with indexing is positioned on grid plates M12 and M16 via a centering sleeve and then bolted. Intermediate elements or assembly elements can be adapted.

This clamping system can be used to move workpieces to the required machining height in the machine for 5-sided machining, or for the safe and quick clamping of workpieces with ledges and different clamping heights on the machine table.

#### Advantage:

Simple, quick and flexible clamping of complex workpiece contours on the machine table. Especially suitable for levelling workpieces or clamping fixtures at the necessary machine heights in the machine tool and for the reliable clamping of same.

#### Note:

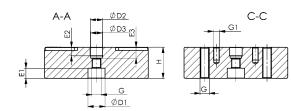

Order numbers for the centering sleeves:

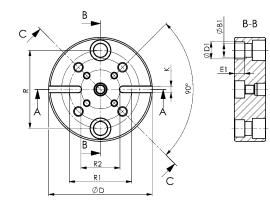

- Ø15: Order no. 535732
- Ø16: Order no. 78006
- Ø22: Order no. 78238

### **Base element**

#### No. 6210FNT

### Base element, flat, for T-slot plate

Tempered steel, plasma-nitrided and burnished.

| Order<br>no. | Size | Н<br>±0.01 | Weight |
|--------------|------|------------|--------|
|              |      |            | [g]    |
| 559097       | B10  | 30         | 3861   |
| 559098       | B20  | 30         | 6758   |

#### **Application:**

The main element can be freely positioned and fastened on the machine table with T-slots. Intermediate elements or assembly elements can be adapted. This clamping system can be used to move workpieces to the required machining height in the machine for 5-sided machining, or for the safe and quick clamping of workpieces with ledges and different clamping heights on the machine table with T-slots.

#### Advantage:

Through arrangement of the mounting slots, simple, quick and flexible clamping of complex workpiece contours on the machine table is possible with T-slots. Particularly suitable for levelling workpieces or clamping fixtures at the necessary machining heights in the machine tool and clamping these securely.

#### Note:

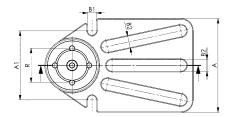

Centring sleeves: - Ø15: order no. 535732 - Ø16: order no. 78006

### **Base element**

#### No. 6210FN

#### Base element, round, for T-slot plate

Tempered steel, plasma-nitrided and burnished.

#### Application:

The main element can be freely positioned and fastened on the machine table with T-slots at the circumferential clamping rim. Intermediate elements or assembly elements can be adapted. This clamping system can be used to move workpieces to the required machining height in the machine for 5-sided machining, or for the safe and quick clamping of workpieces with ledges and different clamping heights on the machine table with T-slots.

#### Advantage:

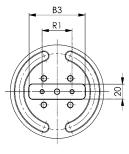

Simple, quick and flexible clamping of complex workpiece contours on the machine table. Especially suitable for levelling workpieces or clamping fixtures at the necessary machine heights in the machine tool and for the reliable clamping of same.

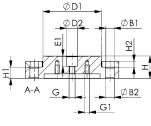

#### Note:

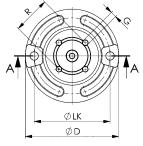

Centring sleeves: - Ø15: order no. 535732 - Ø16: order no. 78006 Spring washer - order no. B10 = 559140 - order no. B20 = 535757. T-nut no. 6322A with cylinder screws ISO 4762-M6x10 can be used for positioning on a T-slot plate.

#### **Application:**

The spring washer is used to securely fasten the base element for T-slot plates with cylinder-head screws onto the machine table.

#### Note:

Order no. 559140 suitable for base element, round order no. 559095, order no. 535757 suitable for base element, round order no. 559096.

#### No. 6210A-20-10

### Adapter reduction from KH20, KP20, KP10.3 to B10

Tempered steel, plasma-nitrided and burnished.

| Order  | Size | H<br>±0.01 | Weight |
|--------|------|------------|--------|
| no.    |      |            | [g]    |
| 534750 | B10  | 50         | 2923   |

#### **Application:**

The adapter element is used to reduce module sizes KH20, KP20 and KP10.3 to an intermediate element size B10. Intermediate elements or assembly elements can be adapted. This clamping system can be used to move workpieces to the required machining height in the machine for 5-sided machining, or for the safe and quick clamping of workpieces with ledges and different clamping heights on the machine table.

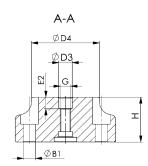

#### Advantage:

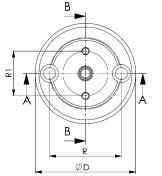

Simple, quick and flexible clamping of complex workpiece contours on the machine table. Especially suitable for levelling workpieces or clamping fixtures at the necessary machine heights in the machine tool and for the reliable clamping of same.

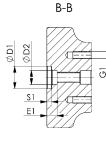

#### Note:

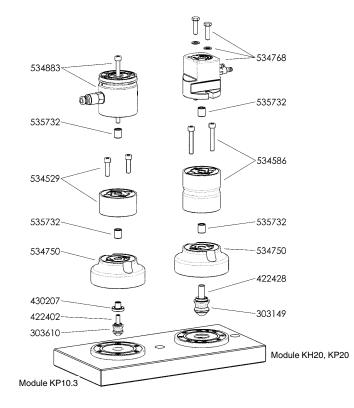

Order numbers for the centering sleeves:

- Ø15: Order no. 535732
- Ø16: Order no. 78006
- Ø22: Order no. 78238
- The fastening screws are supplied as standard.

Adapter for height compensation

#### **Application:**

Adapter for installation of the height counterbalance element to an intermediate or base element.

#### Advantage:

Simple, quick and flexible clamping of complex workpiece contours on the machine table. Particularly suitable for levelling workpieces or clamping fixtures at the necessary machine heights in the machine tool for clamping these securely.

#### Note:

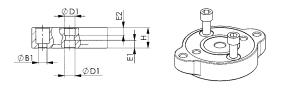

The adapter can be aligned axially on the intermediate or base element using the centring sleeve and then bolted on.

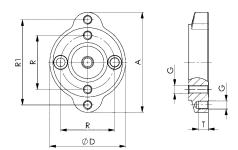

The fastening bolts are supplied as standard.

Order numbers of the centring sleeves:

- size B10: order no. 535732 and 430223

- size B20: order no. 78006

### No. 6210-XX

Centring pin

### Application:

To position the double clamping modules on a clamping plate with clearance holes or a foot element from the "Modular height adapter" AMF clamping system.

ØD

ØD2

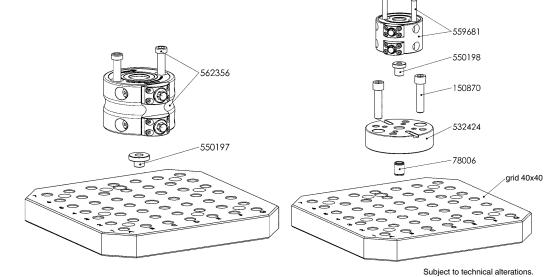

ØDI

#### Advantage:

Highly-precise positioning of the double clamping module.

#### Note:

The centring pin is used when the double clamping module is not yet positioned with a pull-stud for T-slot and can be clamped.

### VARIABLE CENTRE DISTANCE -THE SIMPLEST SOLUTION FOR FLEXIBLE MANUFACTURING

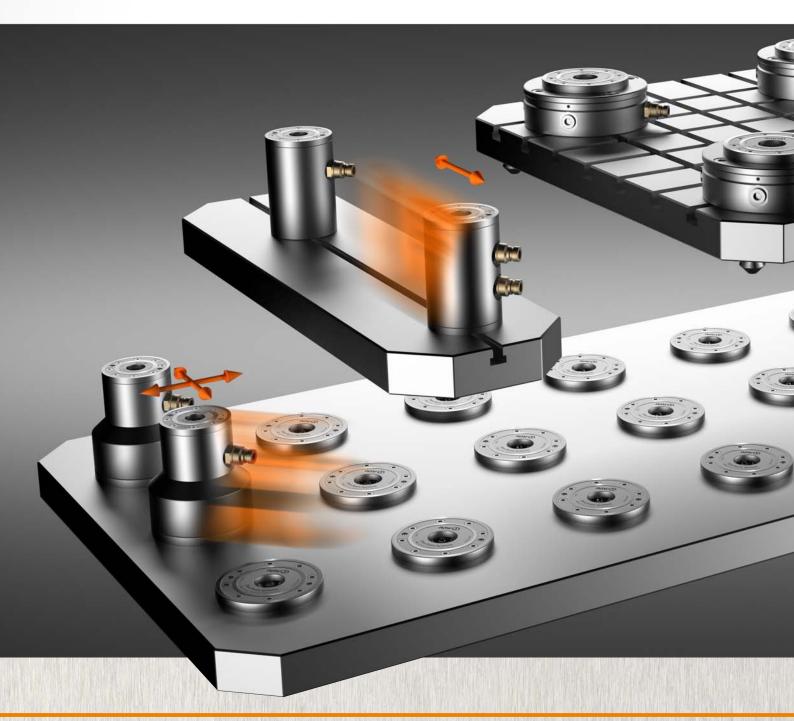

Looking for a simple, flexible and modular clamping solution that satisfies your requirements for a modern, costefficient and cost-optimised manufacturing process?

This is guaranteed by the immensely varied AMF zero point clamping system "Zero-Point".

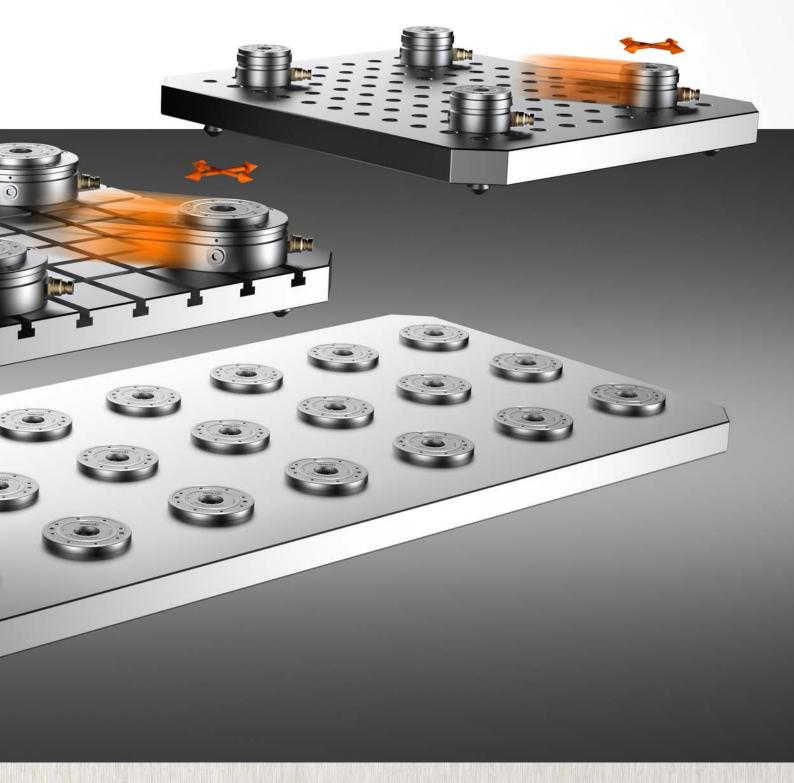

The manufacture of prototypes, small batch series and testing and measuring fixtures used to be a challenging field of application. Flexibility was to some degree limited by a fixed depth gauge.

The variable depth gauge recently developed by AMF has eliminated these boundaries. A simple displacement of the clamping modules enables the depth gauges to be quickly adapted to your specific needs.

This additional flexibility drastically cuts your tooling costs and machine downtimes, not only for medium and large batch series, but also for prototypes and small batch series, as well as test devices.

- > Clamping brackets for direct workpiece clamping in simple 5-sided machining
- > Variable depth gauge by easily displacing the clamping modules on a grooved or grid plate
- > Easy to adapt various module sizes to suit the application at hand.
- > Five standard thread sizes for the pull-studs in the workpiece to choose from M5, M6, M8, M12, M16
- > Use of threaded adapter sleeves enables the pull-studs to be mounted in any size of locating bores in the workpiece.
- > Direct workpiece clamping can be realised by the simplest of means
- > Prototypes, small batch series, test and measuring devices, installation devices can be clamped using the AMF-Zero-Point-System in a manner that fulfills your future needs.

# **FLEXIBLE SYSTEM -** THE ZERO-POINT-SYSTEM ADAPTS PERFECTLY TO YOUR REQUIREMENTS

- > Differing AMF clamping modules from Ø 22 to Ø 148 mm can be used in combination.
- > Smallest depth gauges from 23 mm are realised simply, flexibly and quickly.
- > Thanks to the innumerable possible combinations between differently sized clamping modules and pull studs, direct workpiece clamping is straightforward and specific.

#### No. 6203S4L-150

#### 4-point clamping station

Main body: Aluminium, anodised. Repeat accuracy < 0.02 mm.

#### Design:

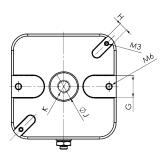

Pneumatic 4-point clamping station with air gun valve for quick opening and closing via air gun. The clamping station has two clamping slots on the side for fastening to the machine table. In addition, positioning slots for aligning on the machine table are made on the underside. The holder for a pull-stud is also provided in the 150 version.

### REPRESENTS GOOD VALUE FROM THE GROUND UP - THE KH10.2 CLAMPING MODULE

Zero-point clamping does not have to be expensive. With the KH10.2 clamping module we offer you the best technology at a favourable price.

The advantages speak for themselves:

- > Outstanding price-performance ratio
- > Drastically reduced tooling time
- > Immediate improvement of productivity
- > Repeat accuracy < 5um
- > Stainless steel
- > Form fit
- > Fitting depth of only 22 mm!

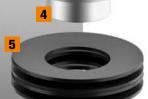

#### 6 COMPONENTS FOR PERFECT CLAMPING -5 BAR COMPRESSED AIR FOR OPENING WITH THE AIR HYDRAULIC PUMP

- Absolutely insensitive to lateral and pull forces that arise. Precision ground support surfaces made of hardened stainless steel for planeparallel clamping ≤ 0.005 mm.
- 2 Hardened piston the combination of form fit and self-locking results in reliable and constant clamping.
- **3** Precision balls for optimal power transmission as well as vibration-inhibiting and wear-resistant use.
- **4** Ball support made of stainless steel seals the clamping module against dirt and liquids.
- **5** Robust plate springs for maximum pull-in, closing and holding forces.
- 6 Module floor with integrated air jet function.
- A The low installation depth of the clamping modules of 22 mm permits a height of the base plate of only 28 mm (without blow out, only 24 mm).

#### No. 6204S2HA-001

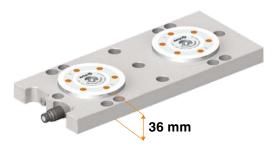

#### 2-point clamping station

Hydraulic unlocking.

Pneumatic blow-out. Opening operating pressure: min. 50 bar - max. 60 bar. Clamping modules' contact surface: Steel, stainless and hardened.

Base plate: Steel, unhardened.

Repetition accuracy < 0.005 mm.

#### Design:

Hydraulic clamping station for optimised clamping times on machine tables with distance between slots of 100 mm. Clamping is with M16 socket head screws. At least two fitting holes are attached for alignment.

The quick coupling plug is pre-mounted, and the integrated blow-out function can be individually connected.

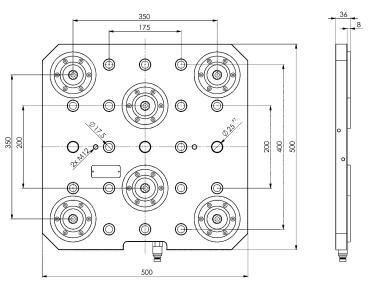

#### Advantage:

Low overall height of only 36 mm.

#### Note:

\* Please observe the installation instructions.

### No. 6204WU12HA-001

#### 12-point clamping cube

Hydraulic unlocking.

Pneumatic blow-out. Clamping modules' contact surface: Steel, stainless and hardened.

Base plate: Steel, unhardened.

Repetition accuracy < 0.005 mm.

#### Design:

Hydraulic clamping cube for set-up-time-optimised clamping on clamping station 6204S6HA-008. Fastening is with pull-studs installed underneath.

The pitch spacing of the clamping modules is 200 mm. The quick-coupling plug is pre-mounted, and the integrated blow-out function can be individually connected.

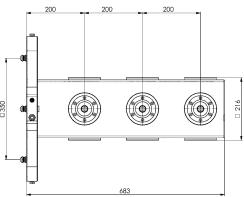

#### Note:

## AMF Clamping station for milling-turning machining

#### No. 6211S

#### 4-point clamping station

K20: hydraulic unlocking. K20.3: pneumatic unlocking. Pneumatic blow-out. repetition accuracy < 0.005 mm.

| Size   | pneumatic | hydraulic | speed max.<br>[1/min] |
|--------|-----------|-----------|-----------------------|
| KH20   | -         | •         | 2200                  |
| KP20.3 | •         | -         | 2200                  |

#### **Application:**

Pneumatic or hydraulic clamping station for setting time-optimised clamping for milling-turning machining.

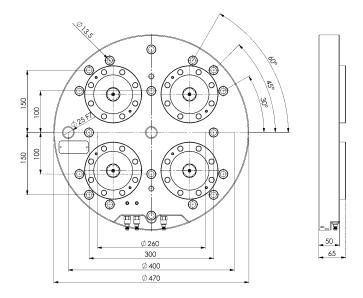

#### Note:

Fastening to the machine table is via socket head screws.

#### On request:

Further dimensions, different pitch circles and number of modules.

### No. 6211P Fixture plate

Steel, unhardened, suitable for 4-point clamping station

| Size | pneumatic | hydraulic |
|------|-----------|-----------|
| 20   | -         | •         |
| 20.3 | •         | -         |

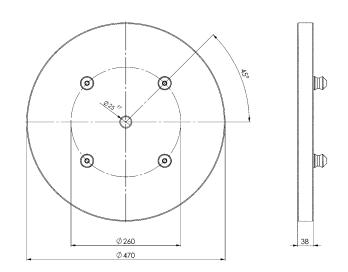

#### Note:

The interchangeable pallet is designed for milling-turning machining and is suitable for clamping stations with 4 clamping modules K20 and K20.3, which are arranged on the 260 mm pitch circle.

#### On request:

Additional dimensions, different pitch circles and number of pull-studs.

### OUR ZERO-POINT SYSTEM FOR YOUR MILLING-TURNING MACHINING -QUICK, PRECISE, DURABLE, SIMPLY CONVINCING!

#### The benefits to you at a glance:

- > Connection for opening the clamping station via the media duct in the machine table or a side connection for manual actuation.
- > Opening pressure for unlocking the clamping modules just 4.5 bar.
- > Only one pneumatic connection required to open the clamping modules.
- > Locking via the self-locking and positive fit mechanism of the clamping modules.
- > Cylindrical clamping nipple mount hence high precision and durability.
- > Great process reliability through integrated support control and direct clamping control.
- > With integrated queries also suitable for automated loading.

#### No. 6370S2-001

#### 2-point clamping station

Hydraulic unlocking.

Opening operating pressure: min. 50 bar - max. 60 bar. Clamping modules' contact surface: Steel, stainless and hardened.

Base plate: Steel, unhardened. Repetition accuracy < 0.005 mm.

#### **Application:**

Zero point clamping sleeve suitable for pneumatic clamping module 6215RP-250 and 251 and mechanical clamping modules 6214RM-250 and 251. The clamping sleeve has an external thread and can, for example, be screwed directly into fixtures or workpieces.

#### Note:

The suitable installation tool is available under the order no. 559439.

#### On request:

- Installation diagrams

| Order  | Size | XY counterbalance | dia. D2 | ØDH  | Н    | М       | R     | S    | Weight |
|--------|------|-------------------|---------|------|------|---------|-------|------|--------|
| no.    |      | [mm]              |         |      |      |         |       |      | [g]    |
| 559093 | 250  | 1,0               | 2,1     | 10,8 | 5,45 | M24 x 1 | 14,75 | 0,75 | 13     |

#### **Application:**

The compensation pull-stud is supported by bearings so that it is radially mobile and is used when large distance tolerances between the clamping sleeves have to be compensated. The compensating clamp is suitable for pneumatic clamping modules 6215RP-250 and 251 and mechanical clamping modules 6214RM-250 and 251

The compensating clamp sleeve has an external thread and can, for example, be screwed directly into fixtures or workpieces.

#### Note:

The clamping sleeve has only a holding function and does not absorb any lateral load. The suitable installation tool is available under the order no. 559439.

#### On request:

### CLASSIC PULL-STUD ARRANGEMENT

AMF(

This arrangement of the clamping modules always optimally positions the pallet to be changed. At the same time, the zero-point pullstud always represents the reference point. The timing pullstud serves to compensate for the free axis. The undersize pull-stud has only a clamping and holding function.

### OPTIONAL PULL-STUD ARRANGEMENT

The exclusive use of timing pull-studs compensates for stronger temperature influences. The reference point always remains in the centre of the pallet. Of course, temperature influences from machine processing can generally be ignored since the heat generated is conducted away by the chips and coolant.

#### No. 6203ZN-140

#### Pull-stud size 140

Hardened, for pneumatic clamping module no. 6203SP-140.

#### Design:

Extremely wear-resistant surface coating.

Order no. 430322: zero point pull-stud "Gold", order no. 430348: timing pull-stud "Black".

#### Application:

For simple, visual differentiation of the various pull-studs.

#### Note:

The timing pull-stud has an additional alignment bore, which can optionally be used for simple installation.

#### No. 6214RM-250-04

#### Actuating pin

Not hardened, for mechanical clamping modules 6214RM-250 and 6214RM-251.

#### 561391 250 **Application:**

Size

The extended actuating pin is used for higher interchangeable pallets.

dia. D

9,5

#### Note:

Order

no.

The actuating pin in the 6214RM-250 and 6214RM-251 clamping modules can be replaced by the extended actuating pin.

### Accessories

#### No. 6370ZN-20-029

#### Puller

For pull-stud size 20.

| Order  | Size | Thread | Weight |
|--------|------|--------|--------|
| no.    |      |        | [g]    |
| 526517 | 20   | M10    | 150    |

#### Design:

Aluminium puller is suitable for 20 pull-stud.

#### Application:

Pull-studs can be simply and quickly removed from the workpiece or fixture. For this purpose, the size 20 puller is mounted on a pin extractor and the pull-studs are pulled out without damaging the mounting bore.

#### No. 6370ZZ

#### Positioning pull-stud Hardened.

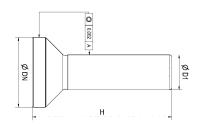

| Order  | for clamping modules | dia. D1 | dia. DN | н  | Weight |
|--------|----------------------|---------|---------|----|--------|
| no.    |                      |         |         |    | [g]    |
| 306241 | 5                    | 8       | 15      | 48 | 60     |
| 306167 | 10                   | 12      | 22      | 48 | 85     |
| 306183 | 20/1000              | 16      | 32      | 64 | 225    |
| 306209 | 40                   | 20      | 40      | 82 | 455    |

#### **Application:**

The positioning nipple makes all of the surface-mounted modules easier to align. It can be clamped directly in the machine spindle, thus achieving the desired gauges when the machine is traversed.

### No. 6203ZNA-150

#### Alignment tool K02 for timing pull-stud Suitable for order no. 427328.

| 550284 | 20   | 5      |
| 550285 | 40   | 6      |

#### Design:

Stainless steel, one-side self-adhesive with removable film.

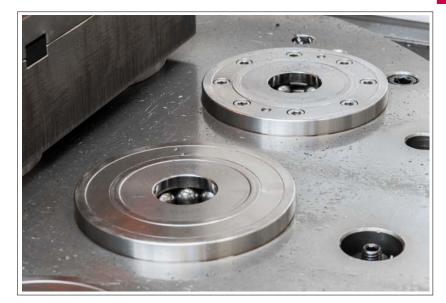

Selected sizes are suitable for installation and construction clamping modules.

#### **Application:**

Protective cover for clamping modules prevents build-up of dirt and chips.

#### Note:

Not suitable for clamping module with indexing, square clamping module and heavy-duty module. It must be noted that the adhesive used has only limited suitable for the use of coolant lubricants.

8

Indexing T-nut is used for the precise positioning of workpieces or fixtures on a clamping module with

#### 325217 Design:

Housing from hardened and burnished steel. Pistons are tempered, nitrided and ground. Compression spring from stainless steel.

1 - 2

1,9

#### **Application:**

6984-30

The support control is used in fixtures where a signal indicating a correctly supported workpiece is required to enable machining. Lightweight workpieces should be clamped before being pressurised with compressed air.

#### Features:

The support control works like a pneumatic back-pressure nozzle. The position is extended from its initial position by a pressure spring. Once applied, the air jet flows through the hollow piston and the radial discharge hole on the support control housing to outside. The discharge hole is sealed as soon as a workpiece is mounted and the piston is pushed downwards by min. 1 mm. The air flow backs up, the internal air pressure rises. The pressure value must be transferred to the control by an appropriate pressure signal converter. The system is relatively insensitive to fine chips.

#### Note:

The pressure signal converter is not included in the supply scope.

Effective piston surface with closed nozzle = 0.95 cm<sup>2</sup>

5

Piston force = piston surface x air pressure + spring force

Reduce the input pressure to 1 bar up to a maximum of 2 bar when the air duct is open, e.g. with a throttle check valve. When the air duct is closed, there is a dynamic pressure of approx. 3 bar.

### Media duct

#### No. 6370ZMMG

#### Coupling mechanism adapter

Suitable for installation clamping module nos. 6151HA / 6151L.

| Order<br>no. | Size | Nominal<br>bore<br>[NW] | A  | A1 | A2 | В  | HA | К  | dia. N | dia. P | R    | Т  | U  | Weight<br>[Kg] |

#### **Application:**

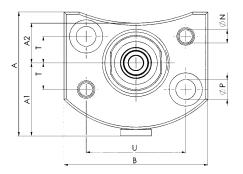

Couplings are used for loss-free transfer of liquid and gaseous media and are adjusted to the cover height of the installation clamping modules.

#### Note:

The coupling mechanism and nipple must be guided approx. 2-3 mm before contact with the axial sealing surfaces. The radial position tolerance (+/- 0.2mm) must not be exceeded. The couplings can only be coupled in a depressurised state.

The separating force due to hydraulic pressure between the coupling nipple and mechanism is given by the formula F [N] = 15.4 x p [bar] and must be taken into account.

#### No. 6370ZMM

|              |                       | [NW]            |        |    |    |    |      |      |        |    |    | [g]    |
| 424242       | 10.3 / 20 / 20.3 / 40 | 5               | 35     | 35 | 60 | 20 | 47,5 | 38,5 | 5,5    | 20 | 40 | 320    |

## **Application:**

The coupling nipple adapter is the counterpart to the coupling mechanism and is used in the interchangeable pallet in which the pull-studs are also located. Couplings are used for loss-free transfer of liquid and gaseous media and are adjusted to the height of the installation clamping modules.

#### Note:

The mounting housings of the two parts must be guided approx. 2-3 mm before contact with the axial sealing surfaces. This function is taken over by the coupling nipple adapter through the centring function. The medium can be passed on at the top over the pipe connection or over the O-ring connection. The radial position tolerance (+/- 0.2 mm) must not be exceeded. The couplings can only be coupled in a depressurised state. The separating force due to hydraulic pressure between the coupling nipple and mechanism is given by the formula F [N] = 15.4 x p [bar] and must be taken into account.

## No. 6370ZMN

## Design:

Steel fitting, galvanized and passivated. Hose of synthetic material with high tensile brassed steel-wire braid.

#### **Application:**

Insert hose and tighten with 1/4 turn maximum.

#### Note:

We recommend only using the 3-metre long high pressure hose for double-acting elements. These high pressure hoses can be used directly in pipe connections. The maximum service life must be 6 years but the maximum service life must not exceed 10 years. Date of manufacture (quarter/year) is printed on the hose. Serviceability must be assessed in accordance with established inspection criteria. See DIN 20066, section 5 for further details.

## Design:

Housing and functioning components made of steel. Seal of shaft made of NBR.

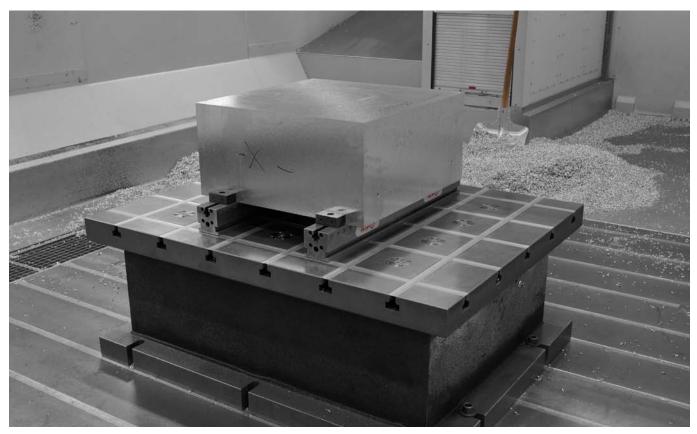

Direct clamping of the workpiece for large aluminium components. Zero-point clamping modules in the work table in conjunction with attachment and intermediate elements of the modular zero-point clamping system enable flexible clamping to be achieved.

Minimize set-up times with AMF zero-point clamping technology: the workpiece is clamped in just a few simple steps for five-sided machining.

The AMF zero-point clamping system provides the greatest possible flexibility. The AMF multiple clamping system can be clamped simply using zero-point clamping technology and can then be integrated in the production process.

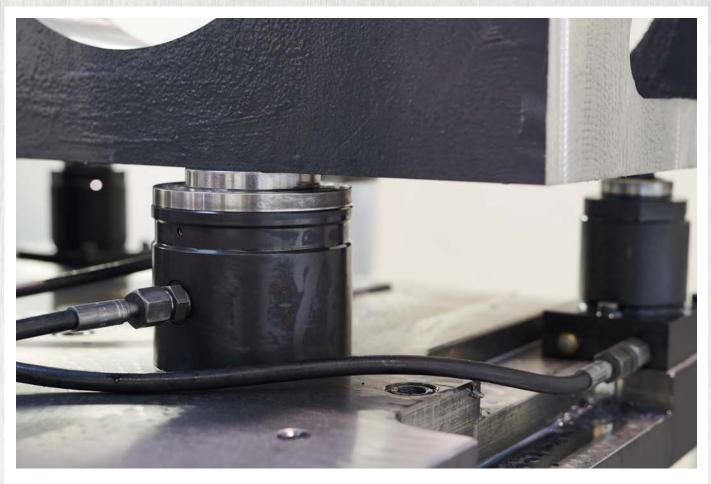

The zero point clamping towers are flexibly adapted to the respective workpiece by simply repositioning them. Colour coding ensures safe, repeatable clamping.

The zero point clamping modules fix and clamp the components directly, without distortion and accessible all around for five-sided machining.

Lifting tables equipped with zero-point clamping technology for deburring the workpieces. As a result, the complete manufacturing process has been seamlessly optimised with the AMF Zero-Point-System.

Use of various sizes of standard clamping modules in one application.

Subject to technical alterations.

ANDREAS MAIER GmbH & Co. KG · Phone: +49 711 5766-196 · Web: www.amf.de

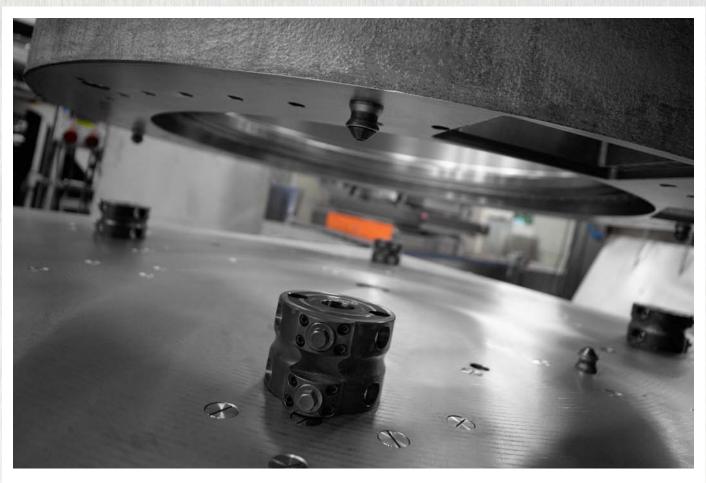

The AMF zero-point system is the standard interface here between various machines. This means that the workpiece can be clamped on the different machine tables in such a way that optimises set-up time regardless of the size.

Subject to technical alterations.

# YOU CAN STILL TAKE ADVANTAGE OF OUR BENEFITS ...

With our "Gonzales" and "Unitool" clamping modules, we offer you flexibility in retrofitting and expanding your existing zero-point clamping technology. As a result, a complete replacement of the system you currently use is no longer absolutely necessary. You keep your investment as low as possible and still take advantage of the benefits of the AMF Zero-Point System.

#### "GONZALES" CLAMPING MODULE (FIG. LEFT)

Your existing Speedy 1000/2000 or DockLock 1000 modules can be exchanged for our corresponding "Gonzales" modules if you meet the following requirements:

- > Unlike Speedy 1000/2000 and DockLock 1000, "Gonzales" requires a hydraulic unclamping pressure of min. 50 bar / max. 60 bar.
- > With countersunk installation, replacement is only possible if there is enough space for the larger covers of the "Gonzales" modules (cover dia. 112 mm or 140 mm).
- > Modules with media ducts cannot be exchanged
- > Use "Gonzales" modules exclusively with "Gonzales" modules in one clamping.
- With the "Gonzales" modules, the corresponding pull-studs of the systems Speedy 1000/2000 and DockLock 1000 can be clamped.

"Gonzales" pull-studs can be clamped with the corresponding Speedy 1000/2000 and DockLock 1000 modules.

#### "UNITOOL" CLAMPING MODULE (FIG. RIGHT)

Our "Unitool" clamping module fits the pull-stud of the Unilock system (dia. 40 mm). The Unitool pull-stud also fits the Unilock system module (NSE-138).

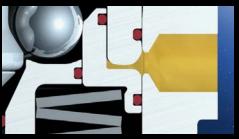

#### STAINLESS STEEL

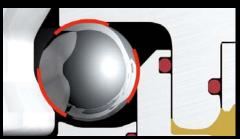

High-alloy, hardened tool steel - and so no corrosion.

#### SAFETY SYSTEM

Process reliability - Clamping module always opens. A piston blockade is thus impossible (only Gonzales modules).

#### FORM FIT

The balls are optimally encapsulated on 3 sides. As a result, the pull-stud always remains firmly clamped in the module.

## **NO BALL CAGE**

The balls lie freely in the ball canal. This freedom of movement enables the balls to continuously re-position themselves.

#### SWING-FREE

AMED

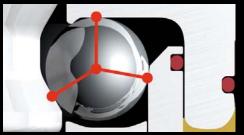

oint.System

6

Swing-free run-in and run-out through the optimal contour of the pull-stud (only Gonzales modules).

## **THREE-POINT PRINCIPLE**

Power transmission by means of the threepoint principle! This optimised force distribution prevents shearing load on the balls.

# No. 6370EGRH

# Installation clamping module "Gonzales"

Hydraulic opening. Opening operating pressure: min. 50 bar - max. 60 bar. Cover and piston hardened. Repeatability < 0.005 mm.

| Order  | Size | Pull-in/locking force up to | Holding force* | Speedy | DockLock | Weight |
|--------|------|-----------------------------|----------------|--------|----------|--------|
| no.    |      | [kN]                        | [kN]           |        |          | [Kg]   |
| 305201 | 1000 | 15                          | 25             | •      | -        | 2,3    |
| 306043 | 1000 | 15                          | 25             | -      | •        | 2,3    |
| 305219 | 2000 | 25                          | 55             | •      | -        | 3,5    |

#### **Application:**

Zero-point clamping system for set-up-time-optimised clamping during cutting and non-cutting machining.

#### Note:

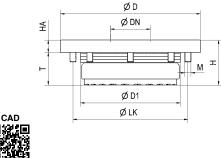

Use "Gonzales" modules exclusively with "Gonzales" modules in one clamping. When changing systems, observe the following: Unlike Speedy 1000/2000 and DockLock 1000, "Gonzales"modules require an unclamping pressure of min. 50 bar / max. 60 bar. With recessed installation, observe the cover diameter D 112 mm / 140 mm. The installation clamping module is opened hydraulically (1) and mechanically locked through spring force. Subsequent uncoupling of the pressure lines is possible at all times (module is tensioned pressure-free).

The clamping module has one connection: 1x hydr. opening (1).

# **Clamping modules "Unitool"**

## No. 6370EURL

#### Installation clamping module "Unitool"

Pneumatic opening.

Opening operating pressure: min. 8 bar - max. 12 bar. Retensioning operating pressure (turbo): min. 5 bar - max. 6 bar. Cover and piston hardened. Repeatability < 0.005 mm.

#### Application:

Zero-point clamping system for set-up-time-optimised clamping during cutting and non-cutting machining

#### Note:

The installation clamping module has high holding, pull-in and locking forces. This is opened pneumatically (1) and mechanically locked through spring force. To achieve the specified pull-in and locking forces, it must be briefly retensioned pneumatically (turbo) (2). Subsequent uncoupling of the pressure lines is possible at all times (module is tensioned pressure-free). Use of the pneumatic pressure booster 6370ZVL-005 is recommended.

The clamping module has two connections:

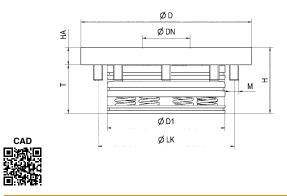

1x pneum. opening (1) / 1x pneum. retensioning (turbo) (2).

Use "Unitool" modules exclusively with "Unitool" modules in one clamping.

\* Please observe the installation instructions.

# WE DEVELOP THE RIGHT SOLUTION – POTENTIAL SAVINGS BY REDUCING SET-UP TIMES

As a system provider with its own production facility, not only do we have the right product for every need. With many years of experience from all fields of clamping technology we develop the perfect solution for different industries, special projects and for very individual requirements.

With full concentration on a single project, an entire team supports you at AMF, which unites all facets for a successful result.

In close cooperation and with short communication channels, our experienced experts from sales, proposal preparation and purchasing work together with our engineers and designers from the development and production departments.

Thus, we can always ensure that all criteria for a costeffective production process are met – our specialists look forward to exciting new challenges. **Just talk to us!**

These Terms of Payment apply for companies, legal entities governed by public law and public law special funds. Our goods and services are supplied exclusively on the basis of the following conditions. Any deviating purchasing conditions of the customer not expressly recognised by us will not become part of the contract through acceptance of the order. By placing the order and accepting the goods we deliver, the customer confirms its consent to our terms and conditions.

#### 1. Offer and contractual conclusion

All our offers are always subject to change without notice unless otherwise explicitly agreed. Our delivery contracts are based on the latest version of our catalogue. Dimension and weight values, as well as illustrations, drawings and data, are nonbinding and can be changed by us at any time. Therefore, deviations cannot be ruled out and do not justify any compensation claims against us.

Orders are considered accepted only when confirmed by us in writing. If, for organisational reasons, the customer does not receive a separate confirmation upon the delivery of goods, the invoice shall also be deemed the order confirmation.

#### 2. Prices

The prices are in EURO, ex-works, excluding VAT, packing, freight, postage and insurance. Unless otherwise agreed, our list prices valid on the day of delivery shall apply. For orders below 50 EUR goods net, we must make a minimum quantity surcharge of a 10 EURO for cost reasons.

#### 3. Tool costs

Unless any other agreements have been reached, the tools fabricated for the purpose of executing the order shall remain our property in all cases, even if we have invoiced a tool cost component separately.

#### 4. Payment

Unless otherwise stated on the invoice, the purchase price falls due for net payment within 30 days of the invoice date (without deduction of discount). Invoice amounts of below 50 EURO are due for payment immediately.

In case of payment default, we shall be entitled to charge default interest. The amount corresponds to our interest rate for current account credits at our main bank; the minimum however being 8 percentage points above the relevant base interest rate applied by the European Central Bank. Moreover, in case of default following written notice to the customer, we shall be entitled to cease to fulfil our obligations until payments are received.

#### 5. No set-off

The customer can set-off only with legally confirmed or undisputed counterclaims.

#### 6. Right of withdrawal in case of delayed acceptance or payment and insolvency

If the customer fails to accept the goods in due time, we shall be entitled to set a reasonable period of grace, after which we can dispose of the goods elsewhere and supply the customer on a reasonably longer term. Our rights to withdraw from the contract under the provisions of Section 326 BGB and demand damages for non-performance shall not be affected. If the customer fails to pay for the goods once payment is due, we shall be entitled, at the end of a reasonable period of grace we have set, to withdraw from the contract and demand the return of any goods already supplied. Section 323 BGB remains unaffected in all other cases.

If the customer applies for the opening of insolvency proceedings, we shall be entitled, prior to the ordering of security measures by the insolvency court, to withdraw from the contract and demand the immediate return of the goods.

#### 7. Customer-specific fabrications/project fabrications (custom fabrications)

Customer-specific fabrications require binding information on design, quantity etc. in written form at the time of ordering. For manufacturing reasons, we reserve the right to supply up to 10% above or below the order quantity. Technical modifications or cancellations are subject to any costs incurred. The return of customer-specific fabrications is impossible.

#### 8. Delivery and packaging, transfer of risk

The delivery date is non-binding; although stated to the best of our knowledge. It is subject to us receiving correct, defect-free and complete deliveries. The stated delivery dates relate to completion in the factory, starting on the day the order is accepted by us. Delivery is EXW (ex-works) in accordance with Incoterms 2010. Therefore, the costs are borne by the customer. The risk is transferred to the customer when the goods are passed to the person, company or facility nominated to execute the shipment. This applies also for partial deliveries, or if we have assumed responsibility for delivery and installation. The risk shall be transferred to the customer even in the case of delayed acceptance.

In the absence of specific shipping instructions, we shall proceed as we deem fit and without any obligation to the cheapest or most expedient method. The customer agrees that the order can also be delivered in parts, insofar as this is reasonable for the customer. We shall charge a 5 EURO processing free for shipping to third parties that we supply on behalf of the customer.

The packaging complies with the packaging ordinance. Disposable packaging shall be charged at cost price. The packaging cannot be taken back.

#### 9. Performance impediment and/or impossibility

If we are hindered in the fulfilment of our obligation due to the onset of unforeseeable circumstances, which we are unable to avoid despite reasonable effort in relation to the nature of the circumstances (e.g. operational interruption, delay in the delivery of important raw materials, defects in the delivery), the delivery time shall be extended by a reasonable period, insofar as the supply of goods or services is not rendered unreasonably difficult or impossible.

If we have to accept that these circumstances are not only temporary, we shall be entitled to withdraw from the contract either in whole or in part.

If the supply of goods or services becomes impossible, the customer shall not be obliged to furnish its own contractual service. Section 275 BGB applies mutatis mutandis. If, however, the customer is solely or predominantly responsible for the

circumstances that led to impossibility, it shall remain under an obligation to render the return service. The same applies if this circumstance occurs at a time when the customer is behind schedule with acceptance.

#### 10. Samples/returns

Samples shall be provided only against payment. If samples or models are provided, a credit note shall be issued with the subsequent order if the order value is 125 EURO net or more. Goods can be returned only by agreement, although custom fabrications are excluded from such return.

In the case of returns for which we are not responsible (e.g. incorrect order), we shall charge a processing fee of 10%, the minimum value, however, being 7.50 EURO.

#### 11. Retention of title

The goods shall remain our property unless full payment of all claims and/or until the cheques provided for this purpose are honoured. The itemisation of claims in an ongoing invoice, as well as balancing the account and the recognition thereof does not affect the retention of title. The customer is entitled to sell on the retained goods during the ordinary course of business. However, the customer is not permitted to pledge the goods or transfer them by way of security. It shall assign its claim ensuing from the selling on of the retained goods to us in advance. The customer shall be entitled to collect the claim to the extent that it has fulfilled its obligations towards us. At our request, the customer shall be obliged to state third-party debtors and we shall be entitled to report this and the assignment.

#### 12. Property rights

We reserve property rights and copyrights to all contractual documents such as drafts, drawings, calculations and cost estimates. Such documents must not be reproduced or disclosed to third parties without our consent. Any rights to patents, utility models etc. reside solely with us, insofar as such patents have not yet been filed. Our products are allowed to be replicated only with our written consent.

If objects are fabricated according to drawings or samples, the customer shall warrant that any third party property rights are not infringed by manufacture or delivery. If a third party forbids manufacture and delivery on account of property rights, we shall be entitled to stop manufacture and delivery immediately. The customer shall be obliged to reimburse us with all costs incurred and indemnify us from third party compensation claims. Compensation claims by the customer are impossible.

#### 13. Warranty

If the customer agrees with us a particular quality of the goods, we shall base this agreement on our technical delivery specifications. If we have to deliver according to customer drawings, specifications, samples etc., the customer shall assume the risk for suitability for the intended purpose. If, after the contract is concluded, the scope of goods or services is changed at the customer's request and this impairs the quality or suitability of the goods, claims for defects on the part of the customer shall be ruled out, insofar as such impairments are caused by the customer's requests for change. The time at which the risk is transferred is decisive for the contractual state of the goods. Wear and tear of wearing parts caused by ordinary use does not constitute a defect. Claims for defects are ruled out in the following cases in particular: Unsuitable or improper use, incorrect installation and/or commissioning by the customer or third party, normal wear and tear, incorrect or negligent handling - in particular excessive use -, unsuitable equipment, replacement materials, chemical, electrochemical or electrical influences, unless such defects are caused by ourselves.

If the goods contain a defects, we shall provide, following a reasonable period of grace set by the customer, either a replacement or a repair as we deem fit. If such subsequent performance fails, the customer shall be entitled to either reduce the purchase price or withdraw from the contract. Any further warranty claims are ruled out. In case of negligible deviations from the agreed quality, no claims for defects shall be recognised.

The discovery of defects must be communicated to us immediately in writing. In the case of recognisable defects, however, within 10 days of acceptance, in the case of non-recognisable defects immediately after they become evident. The warranty is 12 months, starting with delivery of the goods ex-works.

#### 14. Liability

With the exception of harm to life, body or health on account of a breach of duty by ourselves, our liability shall be limited to intent or gross negligence.

#### 15. Place of fulfilment, place or jurisdiction and governing law

The place of fulfilment for all obligations ensuing from this contractual relationship is D-70734 Fellbach.

The place of jurisdiction for all legal disputes ensuing from the contractual relationship is the court responsible for the headquarters of Andreas Maier GmbH & Co. KG.

All disputes ensuing from the contract or regarding the validity thereof shall be finally decided by a court of arbitration in accordance with the Court of Arbitration Ordinance of the German Committee for Arbitration Court Procedures or the Conciliation and Arbitration Arrangement of the International Chamber of Commerce, recourse to ordinary courts of law being excluded. The legal dunning process, however, remains permissible.

German law shall govern (BGB and HGB). The applicability of the UN Convention on Contracts for the International Sale of Goods (CISG) is ruled out.

#### 16. Severability clause

If individual provisions become legally invalid, the remaining provisions shall not be affected. The legally invalid provision shall be replaced by regulations that most closely reflect the economic purpose of the contract with reasonable consideration for the mutual interests. The publication of these Terms of Sale, Delivery and Payment renders all previous versions invalid. This does not apply for any contracts concluded prior to announcement.
